The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

EARLESTOWN.—Nov. 30.—The Newton-in-Makerfield Urban District Council invite competitive plans for erection of a public library, the total cost, exclusive of site, not to exceed 4,000l. Mr. C. Cole, clerk, Town Hall, Earlestown, Lanes.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SHEFFIELD.—The Guardians of the Poor of the Sheffield Union invite plans from local architects for alterations to the union and vestry offices in Westbar. Premiums of 25l., 15l. and 10l. Mr. E. Holmes, assessor, 38 Church Street. Particulars from Mr. A. E. Booker, Union Offices, Westbar.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

**TRADE NOTES.**

We have much pleasure in announcing that Mr. T. H. Batstone has joined the firm of Aldam Heaton & Co., Ltd., the well-known ecclesiastical decorators of 28 and 29 Baker Street, Portman Square, London, W.

MESSRS. HOMAN & RODGERS have supplied the ironwork and carried out the fireproof construction for the extension of the Rotunda Hospital, Dublin.

MESSRS. WARING & GILLOW have been awarded a grand prix and gold medal at the Milan Exhibition for high-class furniture and decorative work.

THE Bostwick Gate and Shutter Company, Ltd., have furnished the Ritz hotel with polished Delta collapsible gates. The new patent lattice gates are fixed to entrances. The company have also supplied collapsible gates to the left entrance.

A LARGE clock with chimes, showing time on two large dials, has just been erected on the tower of the church, Irthlingborough, Northamptonshire. It is fitted with all the latest improvements. The whole of the work has been carried out by Messrs. John Smith & Sons, Derby.

MESSRS. J. B. JOYCE & Co., Whitchurch, Salop, have just shipped a large quarter clock with four dials to India for the St. Andrew's Colonial Homes, Kalimpong, and also two similar ones to the colonies. Amongst numerous important clocks they have at present in hand is a large quarter clock with three dials 5 feet 6 inches diameter for Allendale Church, Northumberland.

MESSRS. SMITH & STEVENS have been entrusted with the order for two controllers for a pair of 30-ton waggon lifts to be erected by Messrs. Craven Bros. in the new North-Eastern Railway goods warehouse at Newcastle. These controllers will be of 100 horse-power each, constructed under Stevens & Major's patents, and will rank with the largest automatic machines yet produced. Together with the winding engines they will be actuated automatically by electrical relays from three distant points.

THE Birmingham Photographic Society wish to extend the illustrations pertaining to the survey of Warwickshire, in connection with which it has contributed 4,000 platinum, bromide and carbon prints to the reference library of the city. Most of the places of interest, buildings, &c., have been photographed. But there are still subjects which it is necessary should be added to the contributions.

# THE "DRAWWELL" GRATE

WAS PLACED

## First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

**N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.**

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

**J. & R. CORCKER, Ltd.,**

GENERAL IRONFOUNDERS, Ferham Works, ROTHERHAM.

London Showrooms, Saracen's Head Buildings, Snow Hill, City,

W. B. CLARKE, Agent.  
where the "Drawwell" can be seen in action.

**ELECTRIC NOTES.**

THE North British Railway Company having applied for a large additional supply of electric current for lighting and power purposes, the electricity committee of Glasgow Corporation recommend that a special agreement be entered into with the applicants under which they shall pay for the current taken by them for lighting up to 750,000 units per annum at the rate of 1½d. per unit, for any quantity to be taken by them during such period in excess of 750,000 units at the rate of 1d. per unit, and for the current taken by them for power purposes at the ordinary rates for supplies for power.

MR. H. R. HOOPER held an inquiry at Croydon into a proposal to spend 22,830l. for the purpose of electric light extensions. The loans of the Corporation exceed two millions, and there was much opposition to the proposed expenditure. The town clerk admitted that 4,830l. of the money asked for had been already expended. The inspector called for certain details which were not forthcoming, and he said he could not go on unless the facts and figures were before him, and he should adjourn the inquiry for their production.

A SPECIAL meeting of the Oxford City Council was held for the purpose of affixing the seal of the Corporation to a contract with the National Electric Construction Company, Ltd., for the leasing, reconstruction, extension and electrical equipment of the existing horse tramways. There were forty-two members present, and after a few questions had been asked and answered the Council unanimously decided to affix the seal to the Dotter contract. Two members abstained from voting.

THE directors of the Co-operative Wholesale Society, on the advice of their engineer, Mr. W. Fletcher, have substituted electric power for steam for driving purposes at their flour mills at Dunston-on-Tyne. The horse-power represented is 2,000. The steam generating and driving plant which has been discarded was modern and in good working order, but the directors were assured that the change to electric power would be cheaper and lead to still greater efficiency in the receiving, cleaning and milling of the wheat. A sub-station has been built on the premises, into

which are led the high-tension mains of the Durham County Electrical Power Distribution Company. The manager states that he is highly satisfied with the result. There is now more space available, and the cost is believed to be less.

**BUILDING AND BUILDERS.**

THE Northampton Builders' Association at their annual dinner had the names of twenty-nine speakers on their toast list.

THE Manchester Central Hall committee have under consideration the building of another hall in Peter Street, in connection with the Free Trade Hall Sunday services. Land has already been secured. It is intended to erect premises on an extensive scale, the cost of which will be, including the land, somewhere about 50,000l.

THE opening of the Forest Gate United Methodist Free church and schools took place on the 25th inst. The scheme has been carried out for 7,328l. by Mr. H. J. Carter, of Grays, Essex. The church accommodates 1,300 persons. The facings are in red brick. Messrs. G. Baines & Son, 5 Clement's Inn, W.C., are the architects.

THE management committee of the General Federation of Trade Unions, in its quarterly report, deprecates the present system of continuing full-time employment, and even overtime, when work is scarce, thus necessitating discharges, when a more general distribution of work would largely reduce the numbers of the unemployed. The committee is "strongly of opinion that the object should not be to keep working hours at the normal, irrespective of the numbers employed, but to keep on shortening hours as the demand slackens, the object being to keep all employed. The committee recommends that the Government be urged to regulate the distribution of work under its jurisdiction, so that the necessity to discharge workmen will be obviated; that the Government urge on all public bodies and recommend private firms to regulate the distribution of work; and that the practice of overtime be condemned. The committee also considers that such work of public utility as it has previously suggested might well be proceeded with."

At a meeting of the Association of Municipal Corporations on the 19th inst. in London, the borough treasurer of Accrington called attention to the stringent building regulations recently issued by the Board of Education, which required that no single department of an elementary school should accommodate more than 400 or 500 children, thereby involving education authorities in unnecessary capital expenditure on new schools, and increasing the cost of maintenance. He moved that strong representations should be made to the Board of Education with a view to securing the modification of such regulations. After some discussion the subject was referred to the education committee. At the same meeting the town clerk of Newport (Mon) moved that in order to secure greater regularity in the construction of streets, local authorities should be empowered to alter the proposed position or direction of any intended new street on a building estate for the purpose of causing it to communicate in a direct line with any other street, without liability to pay compensation, unless such power is exercised in an arbitrary or vexatious manner. The town clerk of Walsall seconded. On the motion of the town clerk of Wolverhampton, the reference to compensation was omitted, and, thus amended, the resolution was adopted.

CONSUL RUFUS FLEMING, of Edinburgh, has reported to the United States concerning opportunities for American merchants and manufacturers to extend their trade, particularly in that part of Scotland in which Leith, the seaport of Edinburgh, is located. A moderate quantity of American paint, he says, comes to this district. For two or three years there has been a good demand for an American copper paint. Its success has induced paint manufacturers on this side to imitate it, and now similar paints made in Norway and in England are competing strongly with the American article. Structural steel has never been freely employed in the building trade in Edinburgh, except as a support for floors, partition walls, &c. A large warehouse now in course of construction will have a complete framework of steel on the American plan, around which the structure of stone will be erected. It is expected that this departure from the old method of building will lead to the more general adoption of steel frames for business houses of extraordinary size.

## VARIETIES.

THE Acton District Council have decided to purchase for the purpose of a destructor  $3\frac{1}{2}$  acres of land from the Willesden Brick Company, Ltd., for the sum of 6,500/.

THE Tottenham District Council are considering the proposal that artificial stone slabs should be manufactured at the refuse destructor works.

MR. P. J. WALDRAM will read a paper on November 1, before the Civil and Mechanical Engineers' Society at the Caxton Hall, dealing with "Bridge Work Design."

THE Dorking Urban District Council have approved a recommendation that a dust destructor should be provided. The estimated cost is 2,600/. Further inquiries will be made.

MR. H. R. HOOPER, inspector for the Local Government Board, has held an inquiry at Bedford regarding an application for a loan of 24,000/ for the extension and improvement of the Bedford waterworks.

MR. A. A. G. MALET, a Local Government Board inspector, has inquired into an application by the Ilford Council for leave to borrow 25,000/, 11,000/ of which was required for sewage-disposal works. There was much opposition from Barking.

A SCHEME is under consideration at Leigh, Essex, for the reclamation of about a mile of the foreshore, the provision of a lake and the construction of a channel, so that fishing smacks and yachts may anchor at the town at any state of the tide.

THE South Shields Board of Guardians will oppose the decision of the South Shields municipal authority to build a fever hospital near the land upon which the Guardians had to erect cottage homes for workhouse children at a cost of 15,000/.

A RETURN has been issued giving an approximate estimate of expenditure under the Military Works Acts of 1897, 1899, 1901 and 1903. The total of the sums provided under the Acts is 20,810,000/, but it has been decided not to expend up to the full extent of the amounts provided. The actual expenditure up to March 31, 1905, was 13,322,969/, while the estimated expenditure in 1905-6 was 1,300,000/ and that for 1906-7 is 90,000/.

# The DEVON FIRE

Reg. No. 15730.

## FIRST PLACE in TESTS

**The DEVON FIRE.**

Report in "Lancet," May 19, 1906:—

"As a final result of the whole of the tests, the examiners find that of the grates submitted, those of Messrs. Candy & Co. and two other firms are the best, showing practically equal results."

"The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear."

P.N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

**HIGHEST AWARD and MEDAL**  
at the 1906 (Bristol) EXHIBITION of the ROYAL SANITARY EXHIBITION.

**IMPORTANT TESTS OF OPEN DOMESTIC GRATES**

Carried out officially by the Smoke Abatement Society in conjunction with H.M. Office of Works at the New Government Buildings, Parliament Street, London.

# S CANDY & CO.

LTD.

THE Huddersfield Town Council have been informed that the Butterfield reservoir has been made watertight. Remedial works to stop the leakage have involved an expenditure of 70,000*l.* The leakage was discovered at a height of 36 feet, but water had been in to the height of 55 feet without any defect being discovered, and it was now 38 feet high.

THE Bourneville Tenants, Ltd., have obtained twenty-five acres from the Bourneville Trust for the erection of workmen's dwellings. The management of the estate will be in the hands of shareholders and elected representatives of the tenants. The surplus will be divided among the tenants in shares. Mr. George Cadbury has offered to take 7,000 shares.

SWANSEA harbour trustees considered the further extension of the new King's Dock at Swansea at a cost of about 100,000*l.* It was recently decided to increase the siding accommodation by 25 per cent. Other improvements on the eastern side of the dock, involving some 30,000*l.*, were practically, though not definitely, agreed on.

PLANS are being prepared by the St. Pancras Borough Council for the provision on the cleared Brantome Place (Euston Road) site of forty-eight three-room tenements to be let at 3*s.* 4*d.* each room per week and thirty-six two-room tenements at a rental of 3*s.* 6*d.* per room. The estimated cost of the buildings is 20,869*l.* With the exception of the land forming the roadway, all the interests in the Prospect Terrace (Gray's Inn Road) area have been acquired, and the St. Pancras Borough Council hope to begin building workmen's dwellings thereon shortly.

THE Runcorn Urban District Council decided to convert the market hall into a public swimming-bath. It is proposed to put a new roof over the market hall and to use the old roof for covering the space below the market. The swimming-bath will be 75 feet long and 33 feet wide, and the estimated cost is 2,000*l.*, made up as follows:—Providing bath, 1,450*l.*; providing open-air market, 170*l.*; and new roof for bath, 380*l.* The water will be obtained from the Sprinch well, which is at present running to waste.

THE Argentine Government have purchased the proposals, plans and surveys of M. Offermann, engineer, for the construction of a navigable canal between the ports of

La Plata and Buenos Ayres, and for the enlargement of the latter port. It is thought that this purchase will have an important effect in furthering a definite plan for this proposed canal, which has been under the consideration of the Ministry of Public Works for some months, and that the Chambers will be asked to give their sanction to it during the 1907 session.

THE Penrith Urban Council have adopted a proposal by Mr. Baldwin Latham for a supply of water from Hayeswater. The report gave details of two schemes, A and B. The scheme marked A was an estimate for the works on the eastern and south side of Ullswater, and the estimate B was for conveying the water on the north and west side of Ullswater. The cost of A scheme was estimated at 24,630*l.*, and of B scheme 38,580*l.*, both estimates including 10 per cent. for contingencies. After discussing the matter for over three hours the Council decided to adopt the A scheme.

At a meeting of the Lerwick Town Council the committee appointed to consider the question of providing workmen's dwellings reported that they had been unable to devise a workable scheme. Plans were prepared and estimates obtained, but it was found that the houses could not be made self-supporting and there was no power to come on the rates for a deficit. The matter has now been taken up by the County Council, who are to make application to the Congested Districts Board to build houses outside the burgh similar to those recently constructed at Stornoway.

THE Garden City Association have obtained the option of purchase for six months of the Alkington estate of 712 acres about four miles to the north-east of Manchester and a mile from Oldham. The Association will not develop the land itself, but will leave that part of the work to a local garden city company. The decision is that, subject to careful consideration of the questions of price, nature of soil and other conditions, it was desirable to preserve the estate to be developed upon the lines advocated by the Association. The prospecting committee are to take steps to ascertain whether the scheme would be supported locally.

A DRAINAGE scheme for Galashiels, N.B., was explained by the Provost to a public meeting of ratepayers on the

19th inst. The proposed scheme provides for the laying-down of 15 miles of pipes throughout the town on the separate system, at a cost of 16,000*l.*; the provision of septic tanks and bacteria beds at Galafoot, estimated to cost 31,000*l.*; 4,500*l.* for filtration beds, 1,800*l.* for water-power, 5,000*l.* for land and wayleaves, and 6,700*l.* for contingencies, making a grand total of 65,000*l.* The effect of this scheme, spread over fifty years, on the rates would mean on the new valuation of the burgh a rise from 2*s.* 11*d.* to 3*s.* 2½*d.* on occupiers, and 8*d.* to 1*s.* 2½*d.* on owners.

At Manchester there was recently offered for sale a valuable plot of land, containing 624 square yards, fronting to old Millgate, Cateaton Street and Cannon Street, Manchester. A portion of the land is vacant, and on the remainder are the premises occupied by Mr. Goulburn and Messrs. J. Needham & Sons. The lot is freehold and free from chief rent. The Manchester Corporation have agreed to take 33 square yards of the site at 70*l.* a yard, and the purchaser will be entitled to the benefit of the contract. In spite of this inducement, the bidding only reached 30,000*l.*, at which price the lot was withdrawn.

The Eastwood, Greasley and Brinsley joint committee, after visiting various sewage works and having tried many forms of revolving sprinklers at their outfall works, placed orders with Messrs. George Jennings, Ltd., hydraulic engineers, London, for the entire apparatus required. This comprises new improved patent revolving sprinklers, 60 feet diameter, with dosing gear, the construction of which shows a distinct departure from other methods. The apparatus superseded was condemned owing to its joint or seal leaking, whereas this firm's machines have neither joints nor seals to become leaky, the only wearing parts being so designed as to permanently maintain their efficiency in use.

The Camberwell borough engineer, Mr. W. Oxtoby, has prepared a return showing the cost of cleaning the streets of Camberwell as compared with that in other boroughs. There are about 2,050 miles of streets in the metropolitan area, and the cost per mile works out at 330*l.* odd. The cost per mile in Camberwell is 265*l.*, which is 65*l.* below the average. There are nineteen boroughs with a higher cost and eight lower. The average is cast from figures ranging from 722*l.* (highest) to 152*l.* (lowest). The engineer states that the outlay varies each year and is affected by

weather conditions, varying traffic and the general state of repair of the highways. The present cost per mile in Camberwell for sweeping alone is 105*l.*

MESSRS. CADBURY have presented to the city of Birmingham as a memorial of the family connection with the city about 34 acres of land at Rednal, which includes the top of the Beacon Hill. This hill is about 1,000 feet above sea-level, and is the highest of the Lickeys, and indeed the highest land (with the exception of the Clent hills) in the immediate neighbourhood of Birmingham. The desire is expressed that this land should be held by the Corporation of Birmingham for use as an open space in conjunction with the adjoining Rednal and Bilberry hills.

The Local Government Board, in the course of the 35th annual report, say with regard to main roads:—"The total length of the main roads in England and Wales maintained by local authorities during the year ended March 31, 1905, was 27,380 miles, of which county councils repaired 16,970 miles, 16,467 miles being situated in rural districts. The amount expended by the county councils, otherwise than out of loans, during the year on the maintenance, repair and improvement of these roads was 1,225,697*l.* The total length of the main roads situated in urban districts was 4,057 miles, and of those situated in rural districts 23,323 miles."

COLONEL A. G. DURNFORD, R.E., Local Government Board inspector, opened an inquiry on Thursday at the town hall into an application by the Sheffield Corporation for power to borrow various sums of money for municipal work. They are asking for 18,139*l.* for a site in Bernard Road; 1,844*l.* for the new road across Primrose Meadows; 6,632*l.* for works of construction and sewerage in connection with the Crofts Area No. 2; 2,730*l.* for the Church Street improvement and for laying out the churchyard; 1,649*l.* for the continuation of Wincobank Avenue and the widening of Wincobank Road; and 45,650*l.* for various works of sewerage and street improvements.

The city of Liverpool is at present lighted by means of 18,765 lamps, made up as follows:—Electric arc 188, ditto incandescent 82, four and three-light incandescent gas 69, two-light ditto 1,989, one-light ditto (full time) 7,749, one-light ditto (extinguished at midnight) 4,122, court and passage lamps—4-foot lamps 1,623, 2-foot lamps 2,943. To

# CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

deal with the lighting of these lamps 182 men had been employed under the supervision of 14 foremen, while the entire work of maintenance of the columns and lamps had been carried out by 77 inspectors, mechanics, &c. The necessary provisional order for the erection of gasworks for supplying the township of Fazakerley with gas had been obtained, and the necessary land for the site of the works purchased, and Mr. Isaac Carr, engineer to the Widnes Corporation Gas and Water Works, had been instructed to prepare plans and specifications for the building, plant, &c.

An application was made some time ago on behalf of the Birmingham Corporation workmen for an increase of wages of 2s. per week. The minimum amount paid is 23s. A joint committee which considered the question recommends an advance of 1s. per week, not merely on the minimum rate, but on the general scale. The chief labour-employing committees are the public works, health, gas, water, baths and parks, trams and electric supply, and some of these have decided to accept the recommendation and will act upon it at once. When all the committees have adopted the new scale, it is said that it will involve the Corporation in an annual additional expenditure of between 4,000l. and 5,000l.

THE Walton-on-Naze and Frinton Urban District Councils have received an official notification that the Crown claims the whole of the foreshore rights within the respective districts, but that the Board of Trade is authorised to grant the local authorities a lease of those rights at a nominal rent—1l. a year. The Frinton authority has decided to apply for a lease, but the Walton Council maintains that it holds the rights of such parts of the beach and cliffs as have been purchased by it, and with regard to the other portion some of the members have demurred to exercising any powers which the Board of Trade might grant unless the Council be indemnified against the payment of costs incidental to any litigation that might be promoted by the lord of the manor.

DR. HOPE, the medical officer of health for Liverpool, in the course of his report to the Liverpool housing committee in regard to insanitary houses, shows that there existed in January 826 courts, containing 4,787 houses. Of these, 44 courts, with 201 houses, had been dealt with by closing orders. The number of cases in which arrangements had

been made with owners for demolition and improvements was 39 courts, containing 231 houses, leaving altogether for future consideration 682 courts, having 3,936 houses. In nearly every instance there were two houses contiguous to each court, but facing the main street. If these were included it would be necessary to add 1,364 to get the total number of houses which, in their present condition, were without sufficient lighting, ventilation and general sanitary accommodation. A report in regard to the Burlington Street and Brassey Street improvement scheme has been presented by the town clerk to the housing committee. The areas affected by the scheme comprise a total of 10,317 square yards. The number of persons of the working class who will be displaced is estimated at about 725. It is intended to provide accommodation for such persons of the working class who will be displaced as may be required.

A MEETING of citizens was held on Monday at St. George's Hall, Liverpool, to consider the deplorable condition of certain districts of Liverpool, and the urgency of applying all possible remedial measures thereto. The first resolution to be adopted was as follows:—"That this meeting of citizens, whilst gratefully recognising what has already been accomplished by the Corporation, is profoundly impressed with the fact that there yet remain about 7,518 houses in congested areas, occupied by the poor of Liverpool, which are officially declared to be 'unfit for human habitation,' and urgently calls upon the City Council to remedy, in a bold and drastic way, this condition of things, the continuance of which is a grave discredit to the community, and constitutes a constant menace to its health and well-being. The meeting considers that, at almost any cost, the work of clearing the slums and rehousing the people should be actively proceeded with, costly improvement and other municipal schemes, which are less urgent in character, being, so far as necessary, postponed for the time being." It was further agreed:—"That this meeting is also of opinion that, in addition to enforcing the by-laws against overcrowding, to provide for the excess of population in the congested parts of the city, the Corporation would be wise in building on the outskirts, and that to prevent the overcrowding of dwellings the Corporation should seek powers enabling it to control the laying out and planning of the growth of the city."

**SAWDUST FIRELIGHTERS.**

M. GLOVER & Co., of Holbeck Lane, Leeds, makers of fire-wood splitting and bundling machinery, are now placing on the market a patented machine for making firelighters from compressed sawdust, the installation of which might enable many firms to find a profitable use for their waste. The product of the machine is a neat, solid-looking briquette, to be known as the "Bon," which will burn nineteen minutes, and is capable of lighting a fire without the assistance of paper or wood. As the lighters leave the machine they are

ready to be parcelled up. No timber being used in the composition of these lighters, no sawing, wiring or nailing is required, nor do they need dipping. The article is composed of sawdust or other workshop waste and a certain cheap chemical ingredient. The material being taken in hand by the machine, it is fed into moulds carried in a heavy table, which is made to revolve intermittently round

a vertical shaft as centre upon ball-bearings. When the moulds are filled they are carried to powerful compressors, and are then ejected by cams, after which the lighters are scraped off the table by a reciprocating arm on to a shoot, or, if preferred, to a belt which conveys them through a single opening into the packing-room. The capacity of the machine is said to be from 20,000 to 22,000 lighters in a working day of ten hours.

**NEW CATALOGUE.**

The open fire has been so long identified with English life that fireplaces which do not sufficiently honour the idea are considered instinctively to be unsuitable. On that account much attention was given at all times to the designing of fireplaces among us, although unfortunately many English people believed it was necessary to have recourse to foreign sculptors to produce so essential a part of every English room. The new catalogue by Messrs. Carter & Co., of Poole, presents a large number of pleasing designs for fireplaces. As everybody knows, they produce beautiful tiles and other work in faience. But they do not in all cases act on the principle that tiles and faience alone should be employed. It is possible to obtain Carter fireplaces which depend for effect on faience, glazed briquettes and tiles, but in most instances they are combined with chimneypieces of pine or oak. The result is that a charming variety is produced. Whatever material is employed it is in a position that is suitable. Chimney-pieces are, however, only one of the specialties of Messrs. Carter & Co.

**APPRENTICESHIP AND INDUSTRIAL EDUCATION.**

At a meeting of the Bradford District Council for the national registration of plumbers, held at the Technical College, Mr. F. W. Jowett, M.P., gave an interesting résumé of the proceedings of the committee on industrial education since its appointment by the conference of representatives of municipal, educational and labour interests, held at the Guildhall, London, in February last, under the presidency of ex-Speaker Viscount Selby.

Mr. Jowett pointed out at the outset that the work of the

committee had been conducted on the plan of receiving reports from the various members on the different questions involved, and also making further arrangements whereby the members could obtain more information on the subjects of particular importance. They had thus obtained some very valuable information, and many of the reports were specially interesting.

The question of apprenticeships had had special consideration, and the information they had received upon the subject would prove to be of great value. There was, he said, a general opinion amongst the various members in the committee in favour of the development of maintenance scholarships, and Mr. Jowett drew special attention to a report of the London County Council in which the extension of such scholarships was specially mentioned and favoured. The same Council had made a suggestion that all education authorities should make inquiries with regard to the employment of each child after leaving school, and Mr. Jowett was of opinion that if that could only be done some of the most valuable information they had ever had would be obtained.

Referring especially to the training part in the apprenticeship question, Mr. Jowett asked how it could be done? Although in many trades machinery had caused a smaller demand for skilled labour than before, that was not the case in every department of work. There were a number of trades in which combination amongst workmen had maintained the system of apprentices. In the technical education of apprentices something should be done to regulate their numbers. Many employers did not take sufficient trouble with their apprentices, and they never dreamt of providing them with opportunities of becoming first-class workmen. In one country legislation had enacted that if an employer did not do everything in his power for the good of his apprentice he would forfeit the right to have one.

Mr. Jowett, in answer to Mr. Hallam, who took exception to the remarks made with regard to the master and the apprentice, said that if a master provided facilities for his apprentice to get good all round instruction, he had nothing to fear. To keep a young lad at one particular thing, month in and month out, was not making proper provision for him, and the outcome of such procedure would be a half-trained workman.

### DALY COLLEGE, INDORE.

ARRANGEMENTS are now in train for starting this work almost immediately. The design for the college buildings has been prepared, says *Indian Engineering*, by Sir Swinton Jacob, and the style of architecture is Indo-Saracenic, a style in which Sir Swinton simply excels. The main building will be faced with Jaipur marble and all projections, such as windows, domes, &c., will also be of marble. The boarding-houses and other subsidiary buildings will be constructed of light coloured brick and will not be plastered. The main building alone is estimated to cost 5½ lacs, the houses for the principal and other masters will cost a lac, and the laying out of the grounds, the construction of a small hospital and the provision of furniture another 1½ lacs. The Government of India will probably make a substantial contribution towards the cost of these buildings. The boarding-houses, pavilion, temple, masjid, stables, &c., will be constructed entirely from the funds subscribed by the chiefs at a cost of over 3½ lacs. The chiefs have in addition subscribed a further sum of 8 lacs, the greater portion of which will be invested to form an endowment fund. At the head of the list of subscribers stands the Maharajah Scindia of Gwalior with a munificent donation of 5 lacs; next comes the Indore Durbar with 2 lacs, third the Maharajah of Rewa with 1½ lacs. The remaining subscriptions range from 40,000 rs. to 50 rs.

A BLOCK of fifteen shops, to be called "The Market," is about to be erected at Chiswick, having a total frontage to Turnham Green Terrace of 254 feet. Messrs. Palgrave & Co. are the architects and Messrs. R. Ward & Son the contractors. The contract has been signed and the work is to proceed immediately.

An imposing building, to be called "Green Court," is to be erected on a site having a frontage to Shepherd's Bush Green of 225 feet. The building is to contain 156 self-contained residential flats of from three to five rooms each, and will be built in three sections, of fireproof construction, seven storeys high. Each block will have electric lifts approached from spacious lounge hall. The grounds will be laid out with garden courts, two playing fountains, &c. Messrs. Palgrave & Co. are the architects.

Showing the Gully sealed.

## AUTOMATIC FLOOD TRAP

Murray's Patent, No. 23260.

THIS GULLY TRAP provides means whereby, in the event of a sudden back flush of water in the drains, the Gully is automatically sealed from the interior and the water in the drains prevented from escaping through the inlet of the Gully.

### ADVANTAGES.

Gully can be fixed without touching the drains.  
The working parts are very simple and cannot get out of order.  
The Gully can be cleaned out without moving anything.  
The working parts are made of noncorrosive metal.  
The trap is self-acting.

**Price complete - - 24/-**

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

EARLESTOWN. — Nov. 30. — The Newton-in-Makerfield Urban District Council invite competitive plans for erection of a public library, the total cost, exclusive of site, not to exceed 4,000l. Mr. C. Cole, clerk, Town Hall, Earlestown, Lancs.

GLASGOW. — Dec. 12. — The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE. — Dec. 31. — The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

MONTVIDEO. — Dec. 14. — La Comision Nacional de Caridad require competitive plans for new founding hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND. — Feb. 1. — The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

WOLVERHAMPTON. — Dec. 31. — The Board of Management of the Wolverhampton and Staffordshire general hospital, Wolverhampton, invite competitive designs for a nurses' home adjoining the hospital. Mr. J. Stephen Neil, house governor and secretary.

## SUBSCRIPTION TO

**THIS JOURNAL**

**19/- PER ANNUM.**

**WILLINGTON.**—Nov. 9.—For the erection of stone walls to enclose new cemetery ground at Willington, Durham. Mr. J. H. Gardner, surveyor, Oxford House, Willington, Durham.

**WIMBLEDON.**—Nov. 5.—For the carrying-out of the following works, for the education committee, viz.:—(1) Erection of two shelters in the playground of the special school and alterations of playgrounds at the Queen's Road school; (2) painting of railings round the Dundonald Road schools; and (3) painting of external wood and ironwork of the old portion of the Queen's Road school. Education Office, 12 Queen's Road, Wimbledon.

### PRESERVATION OF TIMBER.

THE strength of cross-tie woods has been investigated by the United States Forest Service at its testing stations at the St. Louis Exposition and Purdue University. A report has been prepared by Professor W. K. Hatt, of the United States Forest Service, with the following conclusions:—(1) A high degree of steaming is injurious to wood. The degree of steaming at which pronounced harm results will depend upon the quality of the wood and its degree of seasoning and upon the pressure (temperature) of steam and the duration of its application. For loblolly pine the limit of safety is certainly 30 lbs. for four hours, or 20 lbs. for six hours. (2) The presence of zinc chloride will not weaken wood under static loading, although the indications are that the wood becomes brittle under impact. (3) The presence of creosote will not weaken wood of itself. Since apparently it is present only in the openings of the cells and does not get into the cell walls, its action can only be to retard the seasoning of the wood.

A DEPUTATION of prominent Malvern tradesmen has been appointed to approach the lord of the manor, Sir Henry Grey, with reference to a proposal for a funicular railway up the Malvern Hills. A similar scheme, estimated to cost 3,000%, was mooted many years ago.

### TENDERS.

**TRADE NOTES.**

MESSRS. DOULTON & Co., LTD., have been awarded a diploma of honour and the grand prix at the Milan exhibition, in the hygienic section, for sanitary appliances.

MESSRS. WARING are to carry out the reconstruction of the Pump Room hotel, Bath. At least 70,000*l.* will be expended upon the structural alterations.

MR. ROBERT STEVENSON, of 11 Queen Victoria Street, London, E.C., has been appointed agent for the Glazed Faience and Brick Co., of Selby, Yorks.

MESSRS. J. B. JOYCE & Co., Whitchurch, Salop, have been favoured with the order for a large clock and bells for Adelaide memorial church, Myshall, Ireland. It will contain all the best and latest improvements, and generally to the designs of the late Lord Grimthorpe, for whom this firm had the honour of making a large clock for his own residence. They have also one in hand for New York, and are now fixing a large clock and bells at Shrewsbury schools and another at Claverdon Church, Warwick.

A new hour-striking clock from the designs and plans of Lord Grimthorpe has just been fixed in the new tower of High Cross parish church, near Ware, Herts, by Messrs. Wm. Potts & Sons, clock manufacturers, of Leeds and Newcastle-on-Tyne. All the wheels are of gun-metal, cut on the engine from the solid, and pinions of cast-steel cut on engine and hardened and tempered. Lord Grimthorpe's double three-legged gravity escapement and compensation pendulum for variation of temperatures, with a 2 cwt. cylindrical-shaped bob. The outside dial is 5 feet in diameter, with dark background and gilt figures, hands and minutes.

**BUILDING AND BUILDERS.**

MESSRS. G. & R. COUSIN, of Edinburgh and Alloa, have obtained the contract for erecting the Queen Victoria Memorial school in Scotland.

THE men employed in the building trade at Melbourne demand a forty-four hours week, and declare that they will strike if their request is not considered.

MR. CHARLES HENRY NORMANTON, Ashley Heath, Hale, Cheshire, builder and contractor, of Manchester, has left net personality of 76,162*l*.

THE Bengal Government have under consideration a proposal to appoint a whole-time Government plumber to take charge of all the plumbingwork in Government buildings in Calcutta, whether of the nature of original works or repairs.

THE Crompton District Council have made arrangements to connect untrapped sewers with mill chimneys. The experiment is new, and its effect will be noted with interest. It is thought if there were inlets to mill chimney galleries they would be the means of clearing the sewers of gas.

MR. J. HOWARD COLLS attributes the present depressed condition of the building trade in the Metropolis to the attitude assumed by the London County Council. "A man who wants to rebuild his premises nowadays is so hampered," he says, "by regulations and rules that he is absolutely frightened to do the work, and rather than rebuild he will patch up the premises and keep them in that state."

A STATEMENT of the work done in Greenock Dean of Guild Court during the past twelve months shows there had been 724 cases considered, as against 629 in the previous year, and the estimated cost of the buildings and alterations had amounted to 173,600*l*., an increase of 82,900*l*. This was the highest value in one year during the past two decades, and 85,200*l*. more than the average for the last ten years.

THE Birmingham education committee have approved sketch plans of the proposed Council school in Leigh Road, Washwood Road. The plans are arranged for a one-storey building, with two large central halls. The mixed department will accommodate 700 children in fourteen classrooms,

and the infants' department 300 children in six classrooms. The approximate estimate of the cost is 16,500*l*., but this sum does not include any exceptional work to the foundations.

THE Lancashire Asylums Board on Monday sanctioned plans for the erection of a new asylum at Whalley to accommodate 2,000 patients. Hospital accommodation will be provided for 340 patients, and the architect stated that the plans had been prepared on the most economical lines possible compatible with reasonable requirements. The cost will be less than that at Winwick. At present, however, any estimate of the probable expense would only be the merest guess.

A BUILDER of Letchworth, who appeared at the Luton Bankruptcy Court for public examination, assigned as one of the causes of his failure losses on cottages erected for the Garden City exhibition. He explained that the cottages were to cost 180*l*. each, and were exhibited as having cost that sum of money, but he actually spent 230*l*. on the work. Incidental expenses, he claimed, swallowed up a large part of the extra cost. He still asserted that the cottages could be built for 180*l*., but, pressed by the official receiver, said he knew of no case in which a cottage had been disposed of for less than 200*l*.

THE new municipal buildings at Cardiff were opened on Monday. The buildings have cost 226,288*l*.—129,705*l*. for the town hall and 96,583*l*. for the law courts. Added to this is the purchase of the Cathays Park, 150,000*l*., and the expenditure on laying it out, about 40,000*l*. The superficial area covered by the new buildings is 16,183 square yards, of which the city hall absorbs 9,343 square yards. Eleven million bricks were used in the structures, and these, if placed end to end, would extend a distance of 1,560 miles. The weight of the stone used is 15,700 tons. There are about twenty-five miles of heating and hot-water pipes, and for the electric lighting there are 120 miles of wiring, 100 distributing boards and three main switch controlling boards. There are about a hundred telephones in the various departments. The clock tower on the city hall is 200 feet from the bottom of the foundations, and the two towers of the law courts are 125 feet high. The designs for the municipal buildings and law courts were thrown

open to competition, the assessor being the late Alfred Waterhouse, R.A., his selection being the design of Messrs. Lanchester, Seward & Rickards, London.

### ELECTRIC NOTES.

THE number of consumers of electricity at Accrington has more than doubled during the past few years, and the Corporation are now seeking borrowing powers to enlarge their electrical department at a cost of about 14,000*l*.

THE Bury Town Council have adopted the recommendation of the tramways committee that the extension of the Bolton Road section of the tramways in the direction of Bolton, including the laying of the permanent way, &c., should be carried out under the direction of the Corporation officials, and they have instructed the officials to obtain tenders for the supply of materials and additional cars, and also to make preparations for the execution of the works.

THE report of the Board of Trade on the proceedings under the Tramways Act, 1870, during the session of 1906, states that the number of applications made in December 1905 for provisional orders under the Tramways Act, 1870, was seven. Four of the applications included power to construct new or extension tramways, the remaining three being to revive and extend powers which had expired. Except in two cases, viz. Edinburgh and Queensferry, and Portobello and Musselburgh, the applications were by local authorities. The aggregate length of the proposed tramways was 5 miles 37 chains of double line and 10 miles 61 chains of single line, and the estimated cost was 177,323*l*.

THE engineer and manager of the Brighton electricity undertaking in a report to the Town Council says he advertised the six Lancashire boilers for sale, and in reply received eight offers, ranging from 50*l*. to 210*l*. each. The first three boilers were included in one main contract, and he estimates their value at the time of the purchase at 1,800*l*. The second three boilers, by Messrs. Danks, cost 1,600*l*., making a total of 3,400*l*. The highest offer was that of Messrs. Thomson & Son, of Millwall, of 1,260*l*. The boilers will not be required any further for the generation of electricity, and as the price offered is said to be an

excellent one, it is recommended that the boilers be disposed of to the highest bidder. Prices were received for the removal of the chimney-shaft. The lowest is from Messrs. J. Barnes & Sons, of 99 North Street, who would carry out the work for a payment of 39*l*. 10*s*. The chimney was erected under a main contract, and it is therefore difficult to estimate the cost. It is said to have been 1,750*l*.

MR. BUCHMANN, the British Consul at Munich, reports that various schemes have of late been put forward to obtain water-power from the Bavarian Highlands, which would provide motive-power, officially estimated at 300,000 horse-power, not only to the State railways throughout Upper Bavaria, but also to private industrial enterprises. The Bavarian Government, however, has up till now not departed from an attitude of reserve towards these schemes, the Minister of Communications having expressed the hope, in a speech recently delivered on the subject in the Lower Chamber, that the electrification of the Bavarian State railways was only a question of time, but that the construction of electric railways in the Highlands would certainly be left to private initiative. By a water-power Bill which, at the date of Mr. Buchmann's report, was before the Bavarian Chambers, the Government will be able to acquire the power of expropriating vested rights in certain rivers and streams, the State being thus enabled to develop the water-power of the country for industrial purposes. The area of Bavaria is over 29,000 square miles, of which some 97 square miles are lakes; the length of the rivers is 44,285 miles.

THE Office of Woods has offered to hand over the suspension bridge over the Menai Straits to the County Councils of Anglesey and Carnarvonshire on the following terms:—The structure to be transferred free of charge or of any liability for past debts; the Councils to have power to reduce or abolish tolls; and the transfer to carry with it liability on the part of the Councils for the future maintenance of the bridge in perpetuity. It was decided to decline the offer, one member pointing out that the bridge was eighty years old, and that the foundation on the Carnarvonshire side was artificial, no rock having been found.

## VARIETIES.

MR. W. N. COLAM, Edinburgh, has taken over the business of Mr. James More, jun., recently practising in Edinburgh as a tramway expert.

A DEPARTMENTAL committee is about to be appointed to inquire into and report upon the system of house-letting in Glasgow and other centres in Scotland.

THE Bilston Urban District Council have resolved to carry out the work recommended by Messrs. Bailey & McConnal for securing the stability of the town hall at an estimated cost of 300*l.*, necessary through local subsidences.

THE Manchester sanitary committee have decided to seek borrowing powers for 7,500*l.* to enable them to proceed with the first part of their scheme for the erection of tenement dwellings on the Barrack Street site, Hulme.

IN Glasgow a man was sent to prison for sixty days for the theft of 90 feet of gas-piping from the attic of a house at Jamieson Street, Govanhill. The property was wound round his body.

THE construction of the new branch of the Great Western Railway from Wynhoe, near Banbury, to Ushenden, Bucks, will be proceeded with at once. Messrs. Walter Scott & Middleton, of Westminster, are the contractors. The cost of the new line is 500,000*l.* and the length about eighteen miles.

THE plans and works committee of Edinburgh Town Council have approved sketch plans of the public wash-houses which it is proposed to erect in Paul Street, at a probable cost of 5,000*l.* It was agreed to recommend the Council to give instructions for working plans and estimates to be obtained.

A COMPANY, entitled "The Kingsway Exchange, Ltd.," has been registered for the purpose of promoting a company to build and equip a commercial exchange in the Kingsway, London. The object of the undertaking is to provide a business and social centre for commercial men in London and from the provinces, the Colonies and foreign countries.

THE directors of the Channel Tunnel Company have decided that plans and sections shall be at once deposited in the Private Bill Office of the House of Commons, with a view to the promotion next session of a private Bill authorising the construction of a tunnel between Dover and the French coast.

THE works and stores committee of the Metropolitan Water Board recommend that steps be taken for the construction of one of the storage reservoirs in the Lee Valley authorised by the East London Waterworks Act, 1900. The new reservoir will hold approximately 3,000 million gallons, and the estimated cost is 550,000*l.*

THE Birmingham city engineer and surveyor in his annual report states that 14,255 trenches for various purposes were opened in the streets, as compared with 11,466 in the previous year. To the end of last March there were 271 miles 155 yards of declared highways in the city, being about 2 miles more than in the previous year. Of these 215 miles were of macadam and 13½ of wood.

MR. LYNDEN MACASSEY sat as arbitrator on Monday between the Southern United Tramways Company and the London County Council with reference to the acquisition by the Council of the company's tramways from Vauxhall to Herne Hill and West Norwood. The company claimed a total of 82,962*l.*, and evidence was heard in support of this computation.

AT an inquest held by the Liverpool City Coroner on the bodies of a man and a boy, it was found that death was due to gas poisoning caused by defective fittings. The Coroner thought there should be some authority for

## THE LEEDS FIRECLAY COMPANY LTD

Head Office WORTLEY LEEDS

LONDON OFFICE 2 &amp; 3 NORFOLK STREET STRAND. W.C.

periodically inspecting gas-fittings in houses, and he suggested that it would be a good thing if the gas company, in sending out the demand notes, would point out the dangers that were likely to result from having loose gas taps on the premises.

THE Newcastle-upon-Tyne City Council have adopted a scheme of street improvements in the centre of the town estimated to cost 372,135/. It is the continuation of a scheme commenced several years ago by running Market Street through to New Bridge Street at a cost of 183,000/. The Council expected to make a profit of 127,000/. on the resale of the surplus property.

A PERFORMANCE of selections from Handel's "Messiah" took place on Wednesday evening, the 24th ult., under the auspices of the Southwark Borough Council, at Newington Public Hall, with a band and chorus numbering upwards of 200. The audience was a large and appreciative one, and at the conclusion a hearty vote of thanks was accorded to the conductor, Mr. H. J. B. Dart, for his successful rendering of the great masterpiece which afforded so much delight.

THE Carmarthenshire County Council have granted the wish of a deputation representing various local district councils, which appealed to them to advance the Llandilo and Lampeter Light Railway Company 28,500/. towards the promotion of a light railway in the districts. Cardiganshire had voted 20,000/. and their district councils 10,000/. in respect of twenty miles of the railway, the estimated cost being 139,000/.

THE parishioners of Horsington applied to the Horn-castle Guardians for permission to pull down a dilapidated cottage and sell the materials. This was given, but the Local Government Board, on being asked for its sanction, directed a further parish meeting to be held to give its consent to the sale. This meeting was held and a poll of the parish demanded. The materials of the old cottage are estimated to realise 17. clear, but the cost of the poll will be 34., to say nothing of the delay and official correspondence over this trivial matter.

At the Rhyl Court Leet the attention of the Crown Agent was drawn to the fact that a portion of the Rhyl and North Wales Railway was in danger of being inundated unless the

necessary steps were taken. During the last few years about 100 feet width of the coast has gone, and but a small strip of sand is between the eastern boundary of Rhyl and the sea. The Court Leet decided to ask that defence works be carried out at the expense of the national exchequer, and that the Royal Commission on Coast Erosion should visit Rhyl at once.

As a result of the recent revision of the scale of wages and conditions of employment in the various departments of the Corporation of Blackburn workmen receive in actual wages advances amounting to 3,000/. per annum. A considerable reduction in working hours is also made, rendering the employment of more men necessary. This represents a further 2,000/. per annum, so that the reorganisation scheme has resulted in the expenditure of an additional 5,000/. a year in workmen's wages.

THE erection of the new magnetic observatory and relative buildings by the Government at Eskdalemuir, Dumfriesshire, has been proceeding apace this year, but, says a correspondent of the *Manchester Guardian*, a hitch has now occurred, and the erection of the observatory proper, which is underground, is stopped. This is owing to the suspicion that there is iron in the stone used, which is a blue whinstone found in the neighbourhood. The observation of earth tremors, &c., would be interfered with if iron is present. The other buildings are being proceeded with, the stone being admirably adapted for them.

THE Local Government Board called the attention of the Selby Rural District Council to the medical officer's annual report, in which he stated that the water-supply of Cawood and several villages was bad, most of the inhabitants of the latter place drinking filtered water from the river Ouse. The Board asked if the Rural Council had had the question under consideration, and, if so, with what result. At the meeting of the Council the clerk said the people liked the river water, and declared it was sweeter than other water. He added that the sewage of Selby passed into the river. The Council took no action in the matter.

A MEETING of local authorities at Newport have considered a great scheme for supplying Monmouthshire with water. It is intended to dam the waters of Grwyne Vawr, a tributary of the Usk, near Abergavenny. There is not a

single house on the gathering ground, and the water is so pure that it will not need filtering. Three reservoirs, capable of holding 800,000,000 gallons in all, are proposed to be constructed at a cost of 730,000*l.*, and this will provide a supply of 4,000,000 gallons. The water would supply the whole county by gravitation, as this supply does not affect the sources of the great Welsh rivers. Further consideration of the scheme was deferred.

A SPECIAL conference of the newly-constituted Metal Workers' Federation of Great Britain was held at Birmingham on Saturday. Over sixty delegates were present, representing 120 metal trade unions with a membership of about 400,000. The object of the Federation is to unite the various organisations of metal workers and group them according to their respective branches and localities with a view to increased efficiency, and by the establishment of a monthly newspaper to educate the workers in regard to all political and other questions affecting their interests as trade unionists. The Federation is of non-party political character. Mr. Hodge, M.P., of the Steel Smelters' Association, London, was appointed president, and Mr. C. Hobson, of Sheffield, secretary.

A REPORT of a special committee of Tipton District Council dealing with the local sewage disposal was issued on Monday. It states that, according to the engineer's report, the estimated cost of the outfall works as required by the Local Government Board for a population of 35,000 would be 28,599*l.*, exclusive of commission and other contingencies, whereas if the scheme was worked out on a basis of the present population the estimated cost would be 25,992*l.* Practically the whole of the sewage would gravitate to the existing outfall works. The surveyor had roughly estimated the cost of laying down the sewers and connecting therewith at a sum of 25,000*l.* The whole cost would work as follows:—Messrs. Dodd & Dodd's estimate, 28,000*l.*; surveyor's estimate, 25,000*l.*; surveyor's increase of salary, 500*l.*; purchase of land, 1,500*l.*; total, 54,555*l.* A loan of this sum spread over a period of thirty years would mean a rate increase of 10*d.* in the pound. The committee recommend that application be made to the Local Government Board for sanction to borrow the sum required to complete the scheme.

MR. ALDERMAN R. D. BATCHELOR, J.P., of Darland House, Chatham, the well-known artesian and consulting well engineer and head of the firm of Messrs. R. D. Batchelor, of 73 Queen Victoria Street, London, and Artois Works, Chatham, has been unanimously chosen mayor-elect for his native borough of Chatham for the year ensuing. As a well engineer Mr. Batchelor has carried out some of the largest, deepest and most successful water supplies in this country. In addition to his large artesian well engineering business, Mr. Batchelor is the largest brick manufacturer in the neighbourhood of Chatham, and the owner of a large estate consisting of hop and arable farms, forming the watershed from which the towns of Chatham, Gillingham and Rochester derive their principal water supply. He has been a county justice of the peace for many years, and was high constable of Gillingham in 1896 and 1897.

MR. W. H. HUNTER delivered his inaugural address as president of the Manchester Association of Engineers on Saturday. In the course of it he alluded briefly to the investigation of the phenomena connected with radio-activity, the results of which to the engineers of the future, he said, no man would be bold enough to predict. "In the meantime," he concluded, "I speak with some measure of confidence when I say that it is possible that at no distant date the engineering world will be startled by the revelation of a discovery relating to motive power of such sort and of such far-reaching consequence that if I were permitted to describe it to you to-night you would agree that it of itself may go far to establish the proposition which I have submitted to you this evening."

THE Coventry City Council on Monday again discussed the question of entering into an agreement with the Birmingham Corporation to supply water from their Shustoke reservoir and Whitacre pumping station, such water being obtained from the river Bourne and stored in the Shustoke reservoir. The waterworks and fire-brigade committee were finally authorised to take all steps necessary to enable the Council to apply to Parliament next session for the borrowing and other powers necessary to carry into effect the arrangement with Birmingham Corporation, and that authority be obtained in connection with the Bill for the Corporation to borrow the sum of 75,000*l.* to

inlaid with satinwood, 2 ft. 6 in.  
wide ... .. £3 15*s.*

cover the cost of new mains, &c., which it was estimated would be required in the city during the next sixty years. And also that it be an instruction to the committee to endeavour to obtain a clause in the proposed Bill empowering Birmingham to give and Coventry to take at any time a supply of Welsh water on terms as to price and other conditions to be mutually agreed upon by the contracting parties.

At a meeting held at Cannon Street Hotel on Wednesday to consider the subject of secret commissions, which was presided over by Earl Fortescue and attended by representatives of various professions and trades, it was decided to form an association to promote the enforcement of the provisions of the Prevention of Corruption Act 1906, and to bring to the notice of traders and public bodies the requirements of the law. It is proposed to convene a public meeting shortly in London, when the Act, which comes into force on January 1, will be fully explained and the association formally started. The secretary (pro tem.) is Mr. A. E. W. Gwyn, and the temporary address of the movement is 3 Laurence Pountney Hill, Cannon Street, E.C.

THE Glasgow Town Council have approved a draft of the Glasgow Corporation Order, 1907, on the understanding that clauses could be altered or deleted when it came up in its final form. Among the proposals are the construction of a storm-water overflow from sewer No. 1 to the river, and an extension of the period for the construction of the southern district sewage works; power to impose an assessment for lighting private streets and common stairs, payable one-half by owner and one-half by occupier; an amendment of the Glasgow Corporation (Gas, &c.) Order, 1902, as to stand-by supplies, and power to enable the Corporation to supply electrical energy to any of their own undertakings or properties situated outside the area of supply of the Corporation; powers similar to those in the Nottingham Improvement Act, 1874, and in the Alkali Act, which provide for the prosecution of any engineer, fireman, stoker, foreman or other person who negligently uses any fireplace or furnace constructed so as to prevent or burn the smoke arising therefrom in such a manner that it is not effectually prevented or burnt.

PROFESSOR KAPP, the president of the Birmingham University Engineering Society, in his presidential address dealt with safety appliances designed for the protection of workers in various dangerous and unhealthy trades, being the result of his experiences as the English representative on the international jury at the Milan exhibition, to adjudicate on the inventions submitted in competition for the prizes offered by the Association of the manufacturers of Italy for the prevention of accidents in industrial operations. The Professor announced that the world still awaits a safety appliance which would remove the danger attending the operation of a hand winch. The danger, he explained, lay not so much in the blow an operator might receive, but in the fact that where he was working on scaffolding or other elevations he might be knocked off his balance and fall. The jury considered a number of suggested solutions of the problem, but decided to recommend the withholding of the prize until the next competition in 1908.

#### CLOAK-ROOM FITTINGS.

UNLESS special precautions are taken there can be no doubt that ordinary hat and coat hooks can injure the walls on which they are placed. A heavy coat turns the hook into a lever and as a result the plaster or cement is torn, and if the hook is again placed, as is usually the case, close to its former position an unsightly breach will soon follow. The risk is only slightly diminished by fixing several hooks on a rail. In schools and other establishments where many coats and hats have to be deposited there is usually a rush, and neither hooks nor rails are treated with respect. In addition to the mechanical action some hooks are made of particularly thin metal which cannot resist a strain. Messrs. Taylor & Co., of Birmingham, as metalworkers, have turned their attention to the subject, and devised a system which is adapted for schools, assembly-rooms and other places where young and old people congregate. The appearance is satisfactory, there is no waste of space through clumsy rails, and it is adapted for small children as well as for seniors. The fittings are strong, but what in our eyes makes them most acceptable is that by the use of them

## BUILD, ALTER OR ENLARGE

Hotels, Public Buildings, & Town & Country Houses of any size.

**The feature of their Constructional Work is Soundness and Stability, combined with Rapidity of Execution.**

In Waring's vast New Building, recently opened, there are Departments for everything in connection with either Contract or Private Work, and Architects may be assured that their wishes will be faithfully and carefully carried out by efficient workmen under expert supervision.

Waring's manufacturing resources enable them to satisfy Architects' requirements at the lowest tender prices.

**NEAR OXFORD CIRCUS, LONDON.**

**ALSO AT LIVERPOOL, MANCHESTER, AND PARIS.**

the wall is not injured. There are also special duplicating sliding and numbered hooks by which the reception and return of hats, coats and umbrellas is expedited. Proprietors of all large rooms where conversaciones, &c., are given will find Messrs. Taylor's system advantageous and it will avoid crushing.

### A NEW FIREPROOF FLOOR.

THE patent indented steel bar is one of the most ingenious of modern inventions, especially in connection with concrete construction for fireproof floors. It has the advantage of forming a beam which possesses remarkable stiffness, and which can be used with any system of flooring. A floor composed of concrete with the patent bars was tested by the British Fire Prevention Committee, and the report relating to it has appeared. The area of the floor was 410 super feet, and the load was 280 lbs. per square foot. Each bay was 15 feet by 7 feet 5 inches from centre to centre, the floor was 6 inches thick, and the depth of the beams below the floor was 17 inches. The fire was applied for four hours. At the expiration of 15 minutes the maximum deflection was .9 inches. On the application of water the concrete on the soffit of the beams was knocked

off. It was found that the permanent set of the floor averaged  $\frac{3}{4}$  of an inch, but it was observed that neither fire, smoke nor water passed through the floor. The concrete was composed of 4 parts of blast furnace slag, 1 part of sand, and one part of ferrocrete Portland cement. The test was severe, but both the recorded observations and the photographs in the report show that the concrete and the beams withstood the action of fire and water to an extent that should be enough to satisfy the most severe critic.

### ART SCHOOLS IN THE POTTERIES.

A REPORT has been prepared by Mr. Thorogood, master of the Burslem School of Art, upon co-operation between employers of labour and the committee, with a view to inducing apprentices and employes to study art:—"In this district we probably have more students to whom a sound artistic training is of paramount importance than in any other part of the country—viz. designers, pottery decorators, tile draughtsmen, engravers, modellers, turners and litho-artists—practically all dealing with the staple industry. What provision is made for the education of these young apprentices outside the restricted experience of the factory? If they choose to attend the school and pay their fee, they may avail themselves of the opportunity of studying in the evening, after they have done their day's work, and in the course of the session perhaps make 192 hours' attendance. If they wish to study colour, the only time available in the daytime is Saturday afternoon. My experience in visiting other schools of art in the country (more often than not towns where there is no particular industry demanding artistic training) is that much more attention and better provision is made for the training of craftsmen, during both day and evening, than is the case in our town. My experience in dealing with the many young apprentices in the School of Art enables me to state with confidence that the manufacturers and the trade generally would directly benefit by taking more interest in their training. It is impossible for an apprentice to become a good draughtsman on a factory with the limited amount of time at his disposal, and it is deplorable to come in daily contact with young apprentices who are struggling to improve themselves but find they cannot do what is expected of them because they are not given the opportunity in the matter of time. Good draughtsmanship is indispensable to the craftsman, but the fact is overlooked that it takes a considerable number of years to become a capable draughtsman and colourist. In conclusion I appeal to those interested in one of the most ancient crafts—viz. that of potting—to make use of the Institution, now well equipped and staffed, for the purpose of improving the staple industry and general artistic taste of the district." Mr. Thorogood suggests that apprentices in any work requiring a thorough knowledge of form, draughtsmanship and colour should be allowed to

attend the School of Art at least two mornings per week, such terms to be considered as part of the apprenticeship, and that manufacturers should state clearly in which direction they wished their apprentices to receive instruction. Mr. Thorogood has been granted leave to enable him to visit if necessary schools of art in France at the end of October.

### WATER-SUPPLY OF COVENTRY.

A REPORT concerning the future water-supply of Coventry was recently issued to the members of the City Council by the waterworks and fire-brigade committee. Having referred to the reports received from Mr. Hawksley, engineer, as to sites for a possible supply from the neighbourhood of Weston-under-Weatherley and elsewhere, the committee state they were informed that the Birmingham Corporation were prepared to supply water from their Shustoke reservoir and Whitacre pumping station. The committee add that they met the Birmingham water committee to discuss the matter. As a result it had been ascertained that the Birmingham water committee were willing, subject to the confirmation by the Council of that city and to the necessary Parliamentary powers being obtained for the purpose, to give a supply of water on the following terms:—Coventry at its own cost to lay a line of pipes to connect the reservoirs at Coundon with Birmingham's delivery main at Whitacre; Birmingham to pump and deliver to the Coventry reservoirs at Coundon a supply of water not exceeding 2,000,000 gallons per day as Coventry may require; Coventry to pay Birmingham for the water supplied at the rate of 4d. per 1,000 gallons, subject to a minimum rate of 1,250l. per quarter, entitling Coventry to a supply of about 822,000 gallons daily, or 75,000,000 gallons per quarter; the supply to be given and taken for a period of forty years, or for the period which Coventry may obtain for repayment of a loan for the cost of laying the main; Birmingham to use all reasonable care and take all reasonable precautions to prevent pollution or contamination, and to secure the purity of the water to be delivered, and to properly filter it before delivery; and Coventry to have access at all times to the water before delivery for the purpose of examining and taking samples; in the event of the water to be delivered at any time failing to reach a standard of purity reasonably

required by Coventry, Coventry to be at liberty to terminate the agreement, and (subject to Parliamentary powers being obtained for that purpose) to call upon Birmingham to provide a supply of Welsh water instead of Bourne water—the supply at Shustoke being obtained from the river Bourne—at a price to be mutually agreed upon or otherwise determined by arbitration. The cost of the main from Whitacre to Coundon is estimated at 40,000l. Additional reservoirs at Coundon for the storage of water at some future time are estimated to cost 25,000l. The annual cost of the scheme when the minimum (822,000 gallons) and maximum (2,000,000 gallons) are being taken, would be respectively 6,700l. and 14,923l.

The committee conclude a lengthy report by stating they are of opinion that an arrangement with Birmingham on the lines indicated will afford the best means of meeting the present difficulties, and provide an adequate and satisfactory supply of water for the city for a reasonable length of time. They accordingly recommend that they be authorised to give the necessary notices and take all other steps to enable the Council to make application to Parliament next session for the borrowing and other powers necessary to carry into effect an arrangement with Birmingham, and to prepare and submit to the Council for approval the Bill for the proposed Act. The committee also recommend that authority be obtained in connection with the Bill for the Corporation to borrow the sum of 75,000l. to cover the cost of the new mains, &c., which it is estimated will be required in the city during the next sixty years. The Council have accordingly arranged with Birmingham.

### LIGHTING AND HEATING OF THEATRES.

THE theatres and music halls committee of the London County Council have prepared amended regulations as to the electric lighting and heating arrangements in places of public entertainment which are kept open under the authority of letters patent, or licenses by the Lord Chamberlain or the County Council. Some of the former regulations remain, others are omitted. Among the new regulations are as follows:—

Additional means of lighting in such premises for use in the event of the gas or the electric light being extinguished

# DURESCO

## THE KING OF WATER PAINTS.

The FIRST in the Field. The FOREMOST ever since.

## THE SILICATE PAINT CO.

Made and sold a Water Paint in 1875.

**30** Years' Experience has stamped

as being the premier Water Paint.

SOLE MANUFACTURERS—

## THE SILICATE PAINT CO.,

J. B. ORR & CO., Ltd.,

CHARLTON, LONDON, S.E.

shall be provided for the auditorium, corridors, passages, exits and staircases by a sufficient number of oil or candle lamps of a pattern to be approved by the Council, properly secured to an unflammable base and placed, if possible, out of reach of the public. This shall not apply where there is (a) a complete installation of both gas and electric light, or (b) two complete systems of electric lighting from separate companies, or (c) two complete systems from one company if specially approved by the Council for the purposes of these regulations. In cases (b) and (c), however, the exit notices shall be provided with independent means of lighting or with lights on both systems. All lamps (or lights) on both systems in the staircases, corridors, passages and exits (including the exit notices) shall be kept alight during the whole time the public are in such premises. No mineral oils shall be used in oil lamps.

No flexible conductors smaller than 35-40 S. W. G. shall be used. Conductors conveying currents of high electromotive force inside buildings shall be enclosed in screw-jointed and earthed iron or steel tubing, or armoured cable may be used for supply authorities' services. Any such conductors or any fittings between which high pressure exists or is liable to exist shall be so separated as to prevent any risk of shock to person or of short circuiting. No joints shall be made in iron barrel. Conductors must not be placed where liable to be heated by gas jets, steam-pipes or other appliances.

If casing be used it shall be of hard wood, e.g. teak or oak, or on the auditorium side of the proscenium wall American whitewood casing of good quality may be used. All metallic tubing shall be efficiently earthed, and shall be provided with screw joints or other means of insuring a good and permanent electrical connection, which must be continuous, with boxes and other fittings.

Any exposed portion of the metalwork of an arc lamp liable to become heated to a temperature sufficient to cause a conflagration by contact with scenery or other inflammable material shall be protected by a wire guard.

Tracker wires outside the fire-resisting room shall be so installed and shielded that in the event of breakage, slackness or other displacement, contact with live conductors will be impossible.

A platform with proper means of access thereto shall be

provided where necessary for the convenient operation of the board, and such platform shall be of fire-resisting construction, with hardwood floor (teak or oak) for insulating purposes. Connections shall be made where possible at the front of the board.

No electrical fitting or apparatus of any description shall be so fixed or arranged that under any circumstances can it interfere with the proper working of the safety curtain.

At least one pair of indiarubber gloves must be provided for the use of the electricians in connection with the electric-lighting arrangements, as a precaution in the event of high voltage occurring. The gloves must be kept on the stage switchboard and be kept in good order. At least one bucket, filled with dry sand, must be kept in some accessible position on the stage in readiness for use in dealing with an electric fire, and one must also be kept in each of the intake rooms.

The term "low pressure" in the case of hot water shall be understood to mean the pressure due to the vertical head of water between the boiler and the supply cistern, and in the case of steam it shall be understood to mean a maximum pressure of 15 lbs. per square inch above the pressure of the atmosphere. The construction, ventilation and management of the chamber, room or compartment in which the boiler may be placed and of any fixtures or fittings that may be affected by heat must also be to the Council's satisfaction.

Every boiler or heating apparatus shall be tested by hydraulic pressure when new, and annually thereafter, to twice the working pressure, in the presence of an official of the Council, the cost of any such test being borne entirely by the licensee of the premises. This test will not be required when the boiler or apparatus is insured with an approved boiler insurance company, in which case a certificate, or a duplicate thereof, of a recent test made by the company must be sent annually to the clerk of the Council for inspection.

Every boiler, whether hot water or steam, shall be provided with a dead-weight or spring safety-valve, of sufficient area, which shall be set to blow off at the approved pressure, and shall be so locked up as to prevent any unauthorised person adding to the load on it, whilst also permitting the attendant to lift the valve or turn it on its seat at any time. The safety-valve must be attached either direct to the boiler

**PATENT**

**Queen Anne's Chambers, Westminster, LONDON.**

or by means of a special standpipe of size, form and material to be approved by the Council, and must be so placed as to be protected from soot and dirt.

The safety-valve shall not in any circumstances be placed on the circulating pipes.

Every hot-water boiler must have an independent water-supply cistern, and the supply pipe to the boiler must be at all times open to the atmosphere. The supply cistern and all pipes in exposed situations shall be adequately protected against the action of frost.

All pipes, except such as may be of copper, are to be of stout wrought-iron or wrought-steel tubing, or of a strong section of cast-iron or cast-steel; and all wrought-iron or wrought-steel feed pipes below  $1\frac{1}{2}$  inch internal diameter must be galvanised internally.

Steam boilers may be worked at any approved pressure, but if such pressure exceeds 15 lbs. per square inch above the atmosphere an efficient reducing valve and a safety valve of the same type as that required on the boiler must be fitted. These valves must be so placed that no higher pressure than 15 lbs. per square inch above the atmosphere can ever be reached in any part of the system or piping outside of the boiler-house or compartment. An approved pressure gauge must, in these cases, be fitted on the low-pressure side of the reducing valve. This regulation shall not apply to steam used solely for driving electric generating plant.

No coal, coke, wood or other combustible material is to be so stored or placed that it will be affected by the heat of the furnace, boiler or other heating apparatus.

Where it is desired for stage effects to use apparatus or connections that would not comply with these regulations, application, accompanied by full details, should be made to the Council, and such apparatus, &c., must not be used until the Council's permission has been obtained.

When it is proposed to make use of a steam boiler that has not previously been inspected by the Council's officers and approved, a notice of seven clear days must be given to the Council before putting the boiler to work.

When such a boiler, having been inspected and approved at one theatre, is transported to another for use under exactly similar conditions, further inspection and approval may not be requisite, but the necessary seven days' notice

must be given to the Council, and a recent certificate issued by the boiler insurance company must always be in the custody of the person who is in responsible charge of the boiler, and must be produced to the Council's officers on demand.

Where a boiler is not a fixture on the premises, but may be transported from time to time to other licensed premises, it must bear some approved and permanent stamp or mark that will serve to identify it with the boiler referred to in the certificates granted by the boiler insurance company.

All lifts, hoists, moving machinery, &c., shall be installed, guarded and protected with a view to the prevention of accidents to the public or employees.

In the event of any difference or dispute arising between the Council and the licensee of such premises as to any works which are required by these regulations to be executed to the satisfaction or approval of the Council, or are not definitely specified, or, in the case of alterations to any such premises where the installation has already been approved by the Council, as to the extent, if any, to which these regulations shall apply to such installation, such difference or dispute shall be referred to an arbitrator to be appointed by the President of the Institution of Electrical Engineers at the request of either party, and such arbitrator shall hear and, having regard to the standard required in the foregoing regulations, determine the same, and may either confirm the requirements of the Council or may confirm the same with such modification as he may think proper, or refuse to confirm the same, and the decision of such arbitrator as to the requirements of the Council and the reasonableness of the same and the persons by whom, and the proportions in which, the costs thereof are to be paid shall be final and conclusive and binding upon all parties.

In case of any reference as aforesaid, compliance with the requirements in dispute may be postponed until after the day upon which such reference shall be decided, and the same if confirmed in whole or part shall only take effect as from such day.

NOTE.—Inspections made by the Council's officers must not be taken as guaranteeing the safety or efficiency of any plant or apparatus or any part of the installation.

## Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

VELURE

# VELURE

## WHAT WE SAY

VELURE is a perfected JAPAN PAINT, super-seeding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable. Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

**WORTH**  
ONE GALLON  
WILL COVER ABOUT  
90 SQUARE YARDS

**TRYING**

## WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.  
**Highly Satisfactory. Pleased to Specify Velure.**

The Velure which I experimented with proved highly satisfactory, and I shall be pleased to specify the same when opportunity occurs.

These journals have the largest circulations, and are the  
recognised Organs of the Boot and Shoe Trade.

THE

#### LLANGOLLEN ADVERTISER,

Denbighshire,

Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years,  
has a very large and influential circulation throughout  
North Wales. Being conducted entirely on neutral prin-  
ciples, it finds its way into families of all classes. As it  
is also the only paper printed and published in this district,  
it offers peculiar advantages to advertisers.

**HUGH JONES, Castle Street,  
Proprietor.**

**SOUTH WALES DAILY NEWS.**—Pre-  
eminent as an advertising medium, affording excep-  
tionally wide and effective publicity throughout Wales  
and the West of England, particularly amongst the com-  
mercial and moneyed classes. No appeal for capital in  
the above-named district can be successful without recourse  
being had to the *South Wales Daily News*, which each day  
has a special article on "South Wales Finance."—Chief  
Offices: Cardiff. London: 46 Fleet Street, E.C.

**SOUTH WALES ECHO.**—Eight editions daily,  
36 columns, 4d. One of the largest and most  
attractive evening papers in the provinces. Circulation  
greater than that of all the other evening papers in Wales  
and Monmouthshire added together.—Chief Offices: Cardiff.  
London: 46 Fleet Street, E.C.

**CARDIFF TIMES** (Weekly, 1d.)—For thirty  
years at the head of the weekly press of Wales and  
the West of England. One of the largest penny weeklies in  
the world. On being reduced from a 2d. to a 1d. paper it  
attained a circulation of 81,155 copies. Chief Offices: Cardiff.  
London: 46 Fleet Street, E.C.

awarded First Prize Medal, Adelaide Jubilee Exhibition, 1887, and Sydney Centenary Exhibition, 1888.

2½ in. Thick. FIREPROOF, SOUND PROOF, VERMIN PROOF.

The HAVELOCK PATENT PLASTER PARTITION CO., 63 Finsbury Pavement, E.C.

AWARDED SILVER MEDAL, SANITARY INSTITUTE, 1902.

## THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

### HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

For Simplicity and Efficiency their Closet stands alone.

Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.

### ITS ADVANTAGES ARE:—

1st. The simplicity, strength of the mechanism, and non-liability to get out of order. 2nd. It is self-acting. 3rd. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4th. The large capacity of the containing magazine holding the earth or other deodorising material. 5th. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

**ARCHITECTURE, FURNISHING, DECORATION, FINE ARTS.**

## E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

**TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM.** From the water-colours of JEAN BAE. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable towers and charming turrets, so justly considered of the greatest interest. This work consists of 50 coloured folio plates, difficult to distinguish from the originals, mounted on handsome cardboard and contained in a rich portfolio. Price £4.

**TRAVAUX D'ARCHITECTURE EXECUTES EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM.** By HENRY BEYEART, Architect. This work contains the most interesting productions of Henry Beyeart, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in two portfolios. Price complete, £14 8s.

**L'EMULATION.**

A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, heliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\*.\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

EARLESTOWN.—Nov. 30.—The Newton-in-Makerfield Urban District Council invite competitive plans for erection of a public library, the total cost, exclusive of site, not to exceed 4,000l. Mr. C. Cole, clerk, Town Hall, Earlestown, Lancs.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

WOLVERHAMPTON.—Dec. 31.—The Board of Management of the Wolverhampton and Staffordshire general hospital, Wolverhampton, invite competitive designs for a nurses' home adjoining the hospital. Mr. J. Stephen Neil, house governor and secretary.

A MODEL of a Babcock & Wilcox water-tube boiler has been set up in the technological section of the Kelvingrove Museum, Glasgow. The model is complete in every detail, and is so arranged that all important parts may be examined without difficulty. The boiler is shown fitted into the brickwork, with the exception that the water tubes, the superheater and the interior of the fire-grate are exposed. The other side of the model shows the built-up exterior of brick, with the necessary apertures for cleaning and inspection purposes.

**"Standard" PORCELAIN ENAMELLED BATHS AND ONE-PIECE LAVATORIES** TYPIFY PERFECTION IN MATERIAL AND WORKMANSHIP, AND YET ARE MODERATE IN COST.

"Standard" Ware gives an air of luxury and refinement, makes the bathroom the most comfortable apartment and the most pleasing. A house so fitted increases in value out of all proportion to the cost of equipment.

Write for our elaborate booklet, **"MODERN BATHROOMS,"** also for our special lavatory booklet, showing many new patterns. Ask for Booklet No. 6, post free on application to Dept. F.

# MARPEDO WHITE JAPAN

## SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

TRADE NOTES.

THE Leslie Walker Fire Alarm Company, Ltd., Gamage Buildings, Holborn, E.C., have recently completed an installation of their automatic fire detector which has been fitted throughout the boys' quarters at Harrow School.

THE new workhouse infirmary, Rugby, is being warmed and ventilated by means of Shorland's double-fronted patent Manchester stoves with descending smoke flues, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

WE have been requested to announce that Messrs. Cloke Bros. have relinquished their office at 3 St. Augustine's Road, and that all communications regarding refuse clearing or the supply of hand-picked hardcore, brick rubbish, ashes, clinker, &c., for delivery in London or on the following railways—Great Northern, Midland, Great Central or Metropolitan—should be addressed to 169 Bow Road, London, E.

THE Brazilian *Diario Official* of October 6 contains copy of a law authorising the expenditure of 350,000 milreis (about 21,875*l.*) on the completion of the "Palacio Monroe," the Brazilian Pavilion at the St. Louis Exhibition, which is to be erected in Rio de Janeiro as a permanent structure.

**ELECTRIC NOTES.**

At the audit of the accounts of the Felixstowe Urban District Council Mr. M. W. Dixon, a Local Government Board auditor, said that after a full inquiry he must surcharge the members who had signed a cheque for 3,000*l.* in excess of the amount sanctioned incidental to the Council's electric-lighting provisional order, the Board of Trade having distinctly refused sanction to pay the sum in question to the Suffolk Electricity Supply Company, excepting under conditions which had not been complied with. On behalf of the Council it was stated that the electricity company had issued a writ and the Council was bound to raise the money to satisfy the claim.

The North-Eastern Railway Company are making a series of trials—which will be continued throughout the winter—in order to test the efficiency and relative value of electricity and gas for the lighting of railway coaches. A new type of carriage is being used for the trial of the electric light, an elliptical roof being substituted for the clerestory variety lately in use as being stronger and affording a larger amount of cubic space per passenger without fouling the loading gauge. Stone's electric-lighting system, consisting of a dynamo under each carriage driven by a belt from one of the axles and supplied with accumulators carried under the coach, supplies the illuminant to three handsome frosted lamps suspended from the ceiling of each compartment. When the train stops the mechanism automatically diverts the supply of current from the dynamo to the accumulators, thus securing a steady light while the train is at a standstill and so removing one of the difficulties which have hitherto obstructed the effective use of electricity for this purpose.

**BUILDING AND BUILDERS.**

The Douglas borough surveyor, Isle of Man, is preparing plans and estimates of the cost of erecting Russian baths.

The Staffordshire education committee have provided the sum of 8,623*l.* for the erection of the Stafford new high school for girls and pupil teachers' centre.

MR. JOHN WRIGHT, of the White House, Nottingham, builder, has bequeathed about 50,000*l.* for charitable purposes. His estate was sworn of the value of 68,037*l.*

THE annual meeting of the Building Trades Exchange of the City and District of Glasgow, Ltd., was held in the Exchange at 67 Hope Street on the 31st ult. The treasurer's report showed a credit balance for the year of 40*l.* 8*s.* 1½*d.*, and the dividend was 4 per cent.

ACCORDING to the Fatal Accidents Inquiry (Scotland) Act, 1895, and the new 1906 Act, Sheriff Gardner Miller and a jury conducted inquiries in Edinburgh on the 31st ult. as to the circumstances of three recent fatalities. One related to the death of a labourer, which resulted from an accident he met with at the building in course of erection at the corner of Princes Street and St. Andrew Street on October 15. In the course of operations at the building a box of bricks was being hoisted up and some of the bricks fell from the box and struck Gaffney, who afterwards succumbed to his injuries in the Edinburgh Royal Infirmary. The jury's opinion was that no fault or negligence could be attached to anyone, but they said that greater precaution might be taken where so much loading was being done.

THE publicity given to the Manchester plumbing dispute from the operatives' side of the case has prompted the employers to issue the following statement:—"Although the dispute at present hangs on the notice we gave the operatives on February 27 last (and which we were compelled to revert to when they refused our concessions), we were agreeable to the winter hours being reduced half an hour per day for six weeks, and to lengthen the summer hours half an hour per day for four weeks. This only means two weeks shorter time and a reduction of less than four shillings per annum, for which they work five hours less. We have not proposed to reduce the wages, which have always been 9½*d.* per hour. We also offered three other concessions, which more than compensated them for any supposed loss. We still offer to place the matter in the hands of the Conciliation Board, but up to the present our offer has been refused."

MR. H. B. MILLER, the American Consul-General at Yokohama, in a report to the Washington Bureau of Manufactures on the progress of the Japanese in the production

ASPINALL'S ENAMEL, LTD. NEW CROSS, LONDON, S.E.

of cement, predicts the opening of an era of expansion in this line, basing his belief on the lively demand that he feels sure is to come from Corea, Manchuria, parts of Russia and other Eastern countries. He says that the war temporarily checked the growth of the industry, but the restoration of peace revived it. Not only is the demand for Japanese cement springing up in Corea and Manchuria, but large orders received from San Francisco, brought about by the recent catastrophe, gave a great impetus to it. All the stock in the market has been cleared, and the manufacturers are busily engaged in trying to meet requirements.

MR. BURNS, M.P., having been asked by Mr. Field whether he is aware that certain tenants residing in Camberwell New Road received a peremptory notice to give up, without compensation or reduction of rent, the greater portion of their back gardens under penalty of eviction; whether he is aware that blocks of buildings are being erected close to the backs of the existing houses, almost to the exclusion of necessary light and air; and whether he will have this matter inquired into and reported upon by the local authority's surveyor, says:—"I have made inquiry on this subject, and am informed that it is the fact that the greater portion of the back gardens of the houses in question have been taken away, and that a garage is being erected on the site. I understand that a clear space of about 20 feet from the back walls of the houses has been left, and that the district surveyor has been instructed by the Building Act committee of the London County Council to report if any infringement of the Act takes place. The matter is not one with respect to which the Local Government Board have any jurisdiction."

The estates committee of the West Bromwich Corporation has had under consideration the question of the provision of strong rooms for the safe keeping of the documents under the control of the town clerk, the borough treasurer and borough surveyor. At the present time the strong-room accommodation in the town hall is very inadequate. The committee accordingly recommends the provision of three strong rooms to be built under the town hall, with entrances from the basement corridor, at an estimated cost of 400/.

### VARIETIES.

A NEW church is about to be erected for the district of St. Luke's, Gillingham, near Chatham.

THE Ritz Hotel, Piccadilly, has cost the sum of 850,000/., inclusive of site, buildings, decoration, furniture and equipment.

IN commemoration of the jubilee of the Roman Catholic cathedral at Shrewsbury, a stone porch has been added to the building at a cost of 1,000/.

THE East Riding County Council propose to borrow 10,000/ for the extension of the county hall. The builder's tender amounts to 7,200/., and to this sum must be added the cost of furniture and other expenses.

IT has been decided not to extend the Ashbourne grammar school, which is a picturesque sixteenth-century building, but to erect a new school, plans for which have been approved by the Education Department.

NEW warehouse, offices and show-rooms are about to be erected in High Holborn, London, W.C. The architect is Mr. Henry Smith, and the contractors are Messrs. Patman & Fotheringham, of Theobald's Road, London, W.C.

MESSRS. PATMAN & FOTHERINGHAM, of 100 to 102 Theobald's Road, London, are the contractors for the new hospital in Vincent Square, Westminster, S.W. The architects are Messrs. Read & Macdonald.

THE Salford Town Council have adopted plans for an extension to the Central Tramway car depôt which will provide accommodation for forty-five more cars, and authorised application to be made for sanction to borrow 19,604/.

ON Saturday afternoon the new refuse destructor at Dunoon was formally opened. The destructor has been erected at a cost of nearly 500/ by the Horsfall Destructor Company, Ltd., Leeds, and is a four-cell plant of the most modern description.

OWING to the number of fires which have occurred in barracks during recent years the War Office have had under consideration the best means of providing better protection and water supply. Motor fire-engines are to be issued to the principal military stations, where the men are to be trained to become expert in their use.

BRITISH tubemakers have been successful in securing, against American and German competition, next year's contract for tubes and fittings for the Continental Gas Companies' Association. This is the largest contract for iron tubes of the year, and it is the first time for five years that it has come to Britain. The contract was decided entirely on the question of price.

MR. H. R. HOOPER, a Local Government Board inspector, opened on the 1st inst. at the town hall, Mansfield, an inquiry into the Corporation's application to borrow 26,710*l.*, made up as follows:—For gas capital, 15,000*l.*; for the electricity undertaking, including provision of the Light Railway Company with current, 8,000*l.*; for land for street widening in Rosemary Lane, 840*l.*, and for public baths, 2,870*l.*

MR. OLDRIEVE, architect to the Board of Works, has prepared a scheme for the enlargement of the Court of Session, Edinburgh, which includes the erection of two new courts, in substitution of two of the present Outer House Courts. These new courts will, it is believed, be erected on the vacant ground between the present building and the Cowgate.

A NEW bank is being erected at Tautah, Egypt, from plans by Mr. Robert Williams, of London. The walls are of brick, with Doulling stone dressings from the Chelynych beds of the Ham Hill and Doulling Stone Company. The main entrance is of stone, and forms the chief feature of the building, which stands in a commanding position.

THE finance committee of the Carlisle Town Council have agreed to accept a loan of 100,000*l.* (47,500*l.* for water-works and 52,500*l.* for sewage disposal purposes) from the Prudential Assurance Company at 3½ per cent. interest, repayable by annual instalments of principal extending over the periods of repayment for which the loan is authorised, with interest on the current balance.

THE Lichfield City Council have decided to borrow 4,000*l.* for the following purposes:—Sewerage extensions in the city, 2,000*l.*; additional filter beds and alterations and additions to the sewerage disposal plant, 1,288*l.* 10*s.*; erection of two workmen's cottages at the sewage farm, 350*l.*; purchase of land in Beacon Street for dealing with the storm water, 250*l.*; contingencies, 111*l.* 10*s.*

THE Middlesbrough Corporation have received an offer from a bridge-building firm on Tees-side to build the proposed transporter bridge across the river Tees at Middlesbrough for 52,000*l.* The Corporation are promoting a Bill in Parliament for powers to build a transporter bridge of the cantilever type across the river Tees. The sum mentioned includes foundations, but not the legal expenses, which will bring the total cost to about 55,000*l.* The bridge is being designed and plans prepared for the Corporation by Mr. Geo. Imbault, of the Cleveland Bridge and Engineering Company, Darlington.

THE scheme of drainage and sewage disposal carried out at Milngavie, N.B., at a cost of 8,000*l.* was opened on the 24th ult. About three miles of sewers have been laid down. The disposal works extend to nearly four acres and are on the bacterial system. The installation consists of two covered tanks, each with a capacity of 123,000 gallons, and a continuous filter with destructor clinker as the filtering medium, having an area of 500 square yards and a minimum depth of 5 feet. The tank effluent is distributed by a Stoddart's apparatus and passes into the river Allander by a 15-inch pipe 530 yards in length. The engineer is Mr. T. O. Niven, C.E., Glasgow. The contractors for the drainage works are Messrs. G. Butler & Son, Milngavie, and for the disposal works Messrs. J. Paterson & Son, Ltd., Glasgow.

THE American Consul at Cardiff reports to the Bureau of Manufactures, Washington, that there were 483,031 tons of pig-iron produced in Wales during the first six months in 1906, an increase of 4,220 tons over the output for the corresponding period in 1905. The production by classification was 39,504 tons of forge and foundry, 398,881 tons of hematite and 44,646 tons of basic. The output of pig-iron in Great Britain during the same period was 4,905,424 tons, an increase of 283,824 tons; 157,760 tons of British pig-iron were exported to the United States during the eight months ended August 31 and 4,038 tons of American iron were imported during the same period. The British pig-iron industry is largely dependent upon foreign countries for its supply of iron ore, the imports for the first eight months of 1906 exceeding 5,000,000 tons, of which Spain furnished by far the larger percentage.

— ADVERTISING —

THE new University College Hospital, Gower Street, London, was formally opened by the Duke of Connaught on Monday. The building, which is of red brick with terracotta dressings, occupies an area measuring 232 feet by 225 feet, and rises in the form of a diagonal cross 70 feet above the level of the street, the tower, which springs from the central block, reaching a height of 140 feet. The cost of erection was 200,000*l.* The cruciform plan of the main structure is retained in each of the wards. The wards measure 86 feet by 25 feet, and are according to the ideas of the late Dr. G. Vivian Poore. Each contains twenty-four beds, making a total of about 300. The designs were prepared by Messrs. Waterhouse.

A new reservoir situated among the Dalry hills, known as the Caaf reservoir, has been formally opened on behalf of the Irvine and District Water Board. The Water Board is responsible for a water supply for Irvine, Kilwinning, Stevenston, Saltcoats and Nobell's Dynamite Works, a populated area of 30,000 people. The Caaf stream reservoir, which has been in course of erection for six years at an estimated cost of 40,000*l.*, will insure a constant and sufficient supply. Its capacity when filled will be about 190 million gallons, the water area 37 acres and the greatest depth of water 67 feet. The contractors were Messrs. James Young, Ltd., Glasgow, and the engineers Messrs. J. & A. Leslie & Reid. Additional filter accommodation is also being provided at a cost of 6,000*l.*

#### A NEW DRAWING TABLE.

THE success of W. F. Stanley & Co., Ltd., has been in a large measure owing to the inventiveness of the founder. That has been evident from the beginning, and gave to the instruments and appliances qualities which were not to be found in other examples. When a man is endowed with a power of invention, he is compelled to exercise it even at a time when less fortunate men seek for repose. It then becomes his hobby. Mr. Stanley therefore continues to act as he did many years ago, and one of his latest productions is a patent portable drawing table. The table is on a cast and wrought-iron stand with a heavy tripod base. It can be

raised by a screw to a height of 41 inches if necessary, and by means of a clamping-screw and arc it can be kept horizontal or fixed at any angle likely to be required. The table can therefore be used either when standing or seated. Attached to it is a tray for instruments. With one of the Stanley-Howard drawing-boards on the table work can be done with expedition and surety. The T-square which is adapted to the board can be fixed, and parallel and horizontal lines can be drawn with the aid of a pair of set squares. There is also an isograph, which will serve for other angles than the usual 90 degs., 60 degs. and 45 degs. In that way Mr. Stanley has found that he was able to do all the drawings, including the plan, elevation and sections for his new dividing machine. In a pamphlet he has issued he explains how the operations are carried out. All is feasible, and we have no doubt this new aid to drawing with exactness and facility will become as well known as the other conveniences for the draughtsman which bear Mr. Stanley's name and make architects and engineers indebted to him.

#### NEW CATALOGUES.

If the faithful Dominie Sampson were still living—and he would be sure to hold office in some Carnegie library—it would be excusable for him to use his favourite exclamation when he saw the illustrations of kitchens fitted with Carron cooking apparatus. "Prodigious!" is the most fitting adjective to describe them. But perhaps more justice would be done to the ranges by one of the cooks at Clerihugh's, who in a kitchen resembling Pandemonium by its open fires marshalled feasts that have become classical. With those great ranges with the subsidiary ovens, grilles, jacketed pans, pastry closets, bake-plates, fish-kettles, cookers, muffin-plates, burners, before one's eyes, it might be supposed that in Great Britain we had adopted the system of meals in common, and that a regiment of cooks had to assist in the production of public meals. One range in a hotel at Glasgow cost 276*l.* 16*s.* 6*d.*, another in Edinburgh 203*l.* 19*s.* 6*d.* Whether large or small they are charged on principle. The list of the establishments supplied with apparatus by the Carron Company is re-

markable for its variety. Hotels, restaurants and clubs all over the country were to be expected, but we see also convents, colleges, monasteries, Government institutions, hospitals, homes, dining-cars, prisons, workhouses, canteens and numerous hospitable residences. Evidently they are used in some places as aiding in the production of good cheer, and in others on account of their economy. The colonies also know the advantage of employing them. Some ranges are of less dimensions, and the catalogue shows how well the firm can meet all necessities.

We have received from Messrs. R. Jenkins & Co., of Rotherham, a catalogue of their wrought-iron boilers for domestic purposes, in place of the usual kitchen-range boiler. A handy table of prices is given, which will be found of value when ordering.

### BENEFIT OF FIRES IN GLASGOW.

WHILST Glasgow is spoken of as a modern city, it is much more modern than probably most people imagine. Anyone returning to the city to-day after an absence of, say, twenty-five years, says the *Weekly Scotsman*, would scarcely recognise it, even at its very centre, except that the Clyde still rolls on and the main direction of the thoroughfares is unchanged.

Take the district round about the Cross. The quaint old Cross and Tron steeples are still there, linking the present with the past, but the Sautmarket, the Briggate, the Gallowgate, the High Street and the Trongate of bygone days exist only in name. No longer are the streets narrow and odoriferous, flanked by low-storeyed, narrow-windowed, grime-stained houses, with numerous courts and alleys leading to overcrowded pestilential "rookeries" behind. Under the City Improvements Acts the whole central area of the city has been practically cleared, remodelled and rebuilt on broad and spacious lines, at an enormous cost, no doubt, but not without ample compensation in the way of improvement in the health and morals of the city dweller.

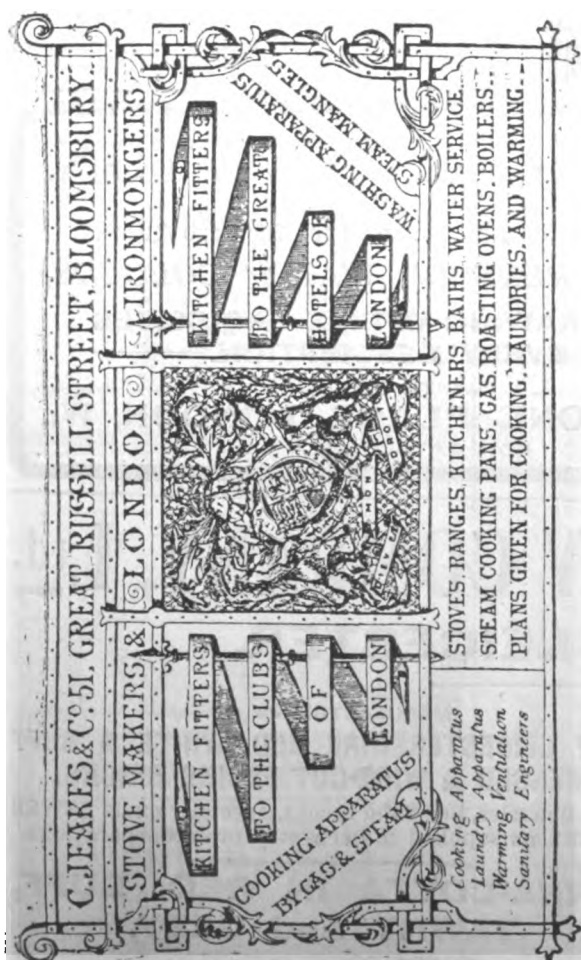

Apart, however, from the area in which the City Improvement Acts have been in operation, there are districts and thoroughfares in other parts that have undergone almost complete transformation. Especially has this been the case in the area from Queen Street in the east to Wellington Street in the west. This has arisen in part from the demand for improved and extended accommodation in that district of the city where business does most congregate.

But another factor has been at work. Every now and then we read in the newspapers the heading "Great Fire in Glasgow." Does it ever occur to anyone what changes on the face of the city have been wrought by agency of the "devouring element?"

Take Buchanan Street, for instance, which is to Glasgow what Princes Street is to Edinburgh, or Oxford Street is to London. Buchanan Street was neither an old street, nor insanitary, nor unduly narrow, yet, largely as the result of the ravages of fire, the lower and most fashionable part of the street has been almost entirely rebuilt since the early eighties, and as it now stands it will probably bear favourable comparison, from an architectural point of view, with any business thoroughfare in any British city.

Local records show that until about twenty-three years ago Buchanan Street had been comparatively immune from serious fires. This fortunate state of affairs ended in 1883 when, on an October Saturday afternoon, fire broke out in the great furniture warehouse of Messrs. Wylie & Lochhead, and next morning there was a wide gap on the west side of the street right through to Mitchell Street—nearly a quarter of a million of money gone at a single sweep. On the site of the ruined warehouse rose another and grander, which to-day is one of the architectural features of the thoroughfare.

A few years later another great warehouse, almost directly opposite that of Messrs. Wylie, Hill & Co., met with equally complete disaster, the loss in this case amounting to something like 120,000/. If memory serves aright, the warehouse of Messrs. Fraser, Sons & Co., nearer Argyle Street, suffered then or shortly afterwards. The pavement had scarcely been cleared of the builders' barricades when Messrs. Macdougall's building at the corner of Mitchell Street was burned out from basement to attics. After this the street had respite from the fire fiend till about three

C. JEAKES & CO., ENGINEERS, 51, Gt. Russell St., LONDON.

COOKING, LAUNDRY, HEATING, VENTILATION, Etc.

years ago, when Messrs. Wylie, Hill & Co.'s warehouse, with much adjoining property, was once more laid in ruins.

In the interval the hand of the builder had not been idle. On the west side of the street, at the Argyle Street end, the rebuilding of the warehouse of Messrs. Stewart & Macdonald effected a much-needed improvement by removing half of the "bottle neck," which had long hindered the traffic and obscured the vista. Further up on the same side old premises disappeared, and in their places arose a quaint, picturesque building for Miss Cranston, of tea-room fame, at the corner of Gordon Street, a striking pile of buildings, which serve as headquarters for the Commercial Bank; and at the corner of St. Vincent Street another massive block erected by the National Bank.

The other side has undergone change to a somewhat similar extent, the new buildings including a great block of shops and offices at the corner of St. Vincent Place, the Royal Insurance Company's new offices at the corner of Royal Bank Place, a lofty block further down, occupied mainly by the North British Rubber Company, and, most recently of all, the fine block erected by Mr. Stuart Cranston, another tea-room pioneer, through which an archway leads into the famed Argyle Arcade.

Thus in its lower half Buchanan Street has undergone well-nigh complete regeneration. The process of rejuvenation has not extended to the upper half of the street to the same extent. Here there are not a few "crannogs," amid which the Athenæum stands almost the sole representative of modernity. But it will soon have more company, since the Liberal Club are about to erect a new club-house cheek-by-jowl with it, and opposite there is a dilapidated, deserted pile which cannot long escape the transforming hand of the building contractor.

### ELECTRICITY IN DAMASCUS.

DAMASCUS acquired a new interest last year in becoming the scene of the first electrical enterprise in Turkey. After the rejection of a similar scheme for Aleppo in favour of the present one, a concession was obtained by a Turkish functionary, and made over to the Société Impériale Ottomane des Tramways, d'Éclairage et de Force Électriques de

Damas. The company is practically Belgian. It has a capital of 240,000l., of which 160,000l. is held by the Société Générale de Chemins de fer Économiques, the Société Générale Belge d'Entreprises Électriques and the Compagnie de Railways et d'Électricité. The terms of the concession give the company a very wide scope. They comprise a monopoly of electric traction, light and power, a virtual monopoly of electrical appliances, a right to establish agencies elsewhere and a telephone service, should such be necessary. The company is under contract with the municipality to light certain parts of the town, and is bound to repave the streets where the tramway passes. A force of 1,200 horse-power is derived from the falls of the river Barada at Et Tekiye, twenty-two miles from Damascus. The original plan was for five miles of tramway, crossing the city in two directions. For the present only 3½ miles, connecting the suburbs of Maidan and Salhiyeh, are being built.

There is no doubt that the company has encountered no small amount of legal, transport and engineering difficulties. By the end of last year a beginning of the work of harnessing the falls had been made. At the moment of writing the bulk of the work at the falls is finished, and in the town rails are laid on half of the 3½ miles, while the transforming station, depôts, &c., are nearly complete. The work has been carried on by a Société de Construction, which employed contractors for certain parts. There has been no lack of native unskilled labour, but it requires a large number of foremen, who are chiefly Italian. Unskilled workmen, of whom there are some 750, are paid from 1s. 3d. to 2s. a day, which varies according to the season from eight to ten hours. Masons receive 5s. 8d. a day, and foremen 6l. to 8l. a month. As to the prospects of the company it is hard to speak. The tramway is expected to be the least profitable part of the concern. It will no doubt largely supplant the cab traffic which is not inconsiderable on its route. More than that it can hardly do without introducing a minor revolution into the habits of the natives. Furthermore, local time is not money, although the present undertaking may, by a happy combination of cause and effect, conduce to make it so. Similarly electric light supplied at a reasonable rate may create a larger demand for artificial light.

**REBUILDING SAN FRANCISCO.**

ACCORDING to the *Argonaut* of San Francisco in an entirely unsuspected quarter of the city—in Fillmore Street, far to the west, in the heart of the residence quarter—there sprang up like magic a retail business district which has since remained there. But so speedily was this short and unwise street crowded, and to such a height did rents there soar, that the merchants and business men seeking quarters there found themselves forced to go elsewhere. A concerted movement, therefore, resulted in the establishment of a handsome retail quarter on Van Ness Avenue, from Market to Washington Streets, and there that quarter has also since remained. For a time the wholesalers wavered. Many of them went to Oakland. Others established themselves around the Southern Pacific Railway yards and tracks in the southern part of the city.

There is a vast stretch of territory in the city which is still a desolate waste. Hundreds of blocks are still covered with ruins; miles of streets are still encumbered with debris. The downtown business district has been cleared away but little. In those parts of the city where the buildings were combustible little remains save standing chimneys. But in the solid business district, where the buildings were constructed of brick and stone, veritable mountains of ruins still remain. Within the legal limits of San Francisco there lies a large extent of territory which was not built upon and which, therefore, bears no superincumbent ruins to-day. This land lies to the north, to the west and to the south of the burned district. Will the new builders of the new San Francisco build on land which is covered with mountains of ruins and debris? Or will they build on land which is open and ready to the hand of the workman? If this question were left to be answered solely by the old citizens of San Francisco, sentiment would impel them to build where they had built before. But is this question going to be answered by them? Is the new San Francisco going to be built by the old San Franciscans? Or is it going to be built by other men—by strangers—by men who come from distant cities—men from distant lands—by corporations? Great railway corporations will soon be contending for the control of San Francisco. Some are already established there; others are on the way. They have no sentiment whatever. They have no emotional love

for the old San Francisco. They are intent only on building up a new one. Where will they strive to have it built? Will they try to have it built where it is most difficult, or where it is easiest? Will they build on the level lands that lie on tide-water to the north? Or will they build on the lands that lie on tide-water to the south? Or will they wait before they build—wait and clear away the heaps of debris and mountains of ruins on the level lands that lie to the east and that once were covered with the buildings of the old San Francisco?

**PREVENTION OF DUST ON ROADS.**

A SUB-COMMITTEE of the Road Board of the Mid-Lothian County Council, reporting on the prevention of dust on roads, stated that in Scotland experiments had been tried recently with tar-macadam. The cost of the experiments in Renfrewshire was 4s. per ton more than ordinary macadam, and in Mid-Lothian tar-macadam would be an increase of 63 per cent. The most important county experiments yet carried out were in Northumberland, where over eight miles of road had been relaid with tar-macadam four inches thick. The bottoming cost 900l. per mile, and the covering of tar-macadam 2s. 3d. per square yard, or 1,496l. additional per mile. On portions of the road which had been laid for two years the surface was in good condition, and although not absolutely dustless, no inconvenience from dust occurred when motor cars were passing. The probable life of tar-macadam was estimated at double, if not more, than ordinary macadam. Tar painting appeared to be the most favoured and effective palliative, but it did not last longer than twelve months. In Leith, where the experiment of last year had been repeated at a cost of 1½d. per square yard, the result was fairly good, but not entirely free from dust. To provide practically waterproof or dustless roads in villages or populous places would mean a very heavy addition to the rates if they were universally carried out, and unless some other source of revenue was found it was clear that even temporary measures only could be effected on a limited scale. The roads as now constructed were unsuited to the new class of traffic on them. The use of the roadside soil as a binding was an economical

where the "Drawwell" can be seen in action.

process for building up most of the roads for ordinary traffic, but it was totally unsuitable for motor cars. A much harder road was required, in which soil should not be used for binding. In view of the present state of experiments, it was recommended that no extraordinary measures should be taken in the meantime, and this was agreed to.

### ABERDEEN MASTER MASONS.

A NOVEL action is in progress in the Scottish Courts. The Aberdeen Master Masons' Incorporation, Ltd., ask that Leslie Smith, master mason, 77 Skene Square, Aberdeen, should produce a schedule containing a short description of all work contracted to be performed by him between July 8, 1904, and March 20, 1906, and the amount of the contract price in each case, in so far as the prices under the several contracts exceed 10%, and refer to work contracted to be performed inside the boundary line round the city and suburban area of Aberdeen, fixed between the Unincorporated Aberdeen Master Masons' Association and the Aberdeen Operative Masons and Stonecutters' Society, in order that the subscriptions at the rate of 1 per cent. on the prices of the contracts payable by him as a member of the Incorporation, in terms of their articles of association, may be ascertained. Payment is also asked of 100%. The Incorporation state that Mr. Smith was admitted a member on July 8, 1904, and he resigned on March 20, 1906. During the time he was a member he carried on business and performed numerous pieces of work in Aberdeen, the contract price of which exceeded 10%, and it was his duty, in terms of the articles of association, within two days after his offers for such pieces of work were accepted to send notice to the secretary or treasurer, so as to enable his subscription of 1 per cent. on the contract price to be fixed. Mr. Smith has, however, only made one return for work so contracted for by him, and has systematically refused to make returns for other work. In his answers he says he was never truly a member of the Incorporation. In July 1904 he indicated his willingness to join, but on reading the articles of association he at once informed the directors and secretary that he highly disapproved of Article 53, which he found to have the effect of giving rise to and perpetuating a malpractice in the

trade, while the suppression of malpractice was represented to and believed by him to be one of the main objects of the Incorporation. In consequence of the provisions of the article it became the invariably recognised practice of members of the Incorporation to add at least 1 per cent. to their proper estimates in all contracts, and thereby to levy from the public to that extent contributions for the creation of a proposed benefit fund. He at once refused to accept the obligations of membership. The Incorporation, in answer to defender's statements, say that he was fully aware of the conditions of membership before he joined, and that he was appointed a director and attended several meetings. It was not until March 20 last that he intimated his resignation of membership.

### FIREPROOF WOOD.

THE meeting of the Fire-resisting Corporation was held last week. Mr. Alfred Baker said that the Company's patents stood in the accounts at 69,067 $\frac{1}{2}$ ., and many valuable patents had been added during the past year, giving a further life of about fourteen years to the old patents. The time appeared to be near at hand when the authorities would recognise the enormous protection against fire to be obtained by the use of fireproof wood. There was evidence that the various county councils were beginning to think seriously upon the subject. The London County Council had passed regulations making it compulsory for theatres to have their scenery fireproof, and provincial theatres were following the example, with the result that an increasing trade was springing up in that direction. The company had done a considerable amount of work in the provinces in the supply of fireproof wood for several of the electric railways in order to obviate danger from a short-circuit. No fewer than four Admiralties had expressed satisfaction with the company's specialties; so much so that they had ordered trials to be made with a view to erecting plant in their dockyards for the purpose of using the wood in the construction of battleships. Mr. Fox, a director of the company, remarked that the advantages of fireproof wood had been fully recognised in the United States. It had been used on no less than 100 ships in the United States Navy which had passed through the Spanish-American War in a most satisfactory

manner. Whereas eleven ships of the Spanish Navy were burned to the water's edge, the American ships, although shot through and through, had not caught fire. Fireproof wood was also being used in all the newest buildings in New York, and there were already three insurance companies who were willing to grant a reduction of from 10 to 33 per cent. in the insurance against fire on buildings when fireproof wood was used.

### SOCIETY OF ENGINEERS.

At a meeting of the Society of Engineers held at the Royal United Service Institution, Whitehall, on Monday evening, November 5, Mr. Maurice Wilson, president, in the chair, a paper was read on "Recent Storage Battery Improvements," by Mr. Sherard Cowper-Coles.

The author first referred to the comparatively small advance that has been made with the lead accumulator of recent years although the industry is of considerable importance, the annual monetary output for storage batteries in England and Germany being estimated at nearly 1,000,000*l.*, so that any economies effected in the life or manufacture of accumulators would be of great importance to the commercial world, irrespective of the new fields of application it would open up. The nickel iron cell was referred to, and a typical discharge diagram given as compared to a lead accumulator.

The important bearing thermo-electricity has on accumulators or secondary batteries was discussed, and a diagram was shown illustrative of this. Ignition cells for firing petrol engines were then considered, and their advantages and disadvantages enumerated as compared to the magneto machines, and figures were given showing that the motorist in having an ignition cell charged paid for the labour and convenience and not the electrical energy. Efficiency being of minor importance, it was maintained that primary batteries with reversible electrodes would be cheaper than storage batteries.

The cut-off point of discharge was then dealt with, and it was pointed out that manufacturers of accumulators were not in agreement, and that there was no standard method of determining the cut-off point, some makers specifying a certain voltage for a given rate of discharge,

while others use the same voltage for all rates, the points of cut-off bearing no proper ratio to the rate of discharge. A diagram was given showing a curve arrived at from a number of determinations of discharge with a 70-ampere hour cell at constant current, all being based upon a cut-off point of 1.85 volts at a ten-hour rate. It was argued that if some such basis of discharge were used by all makers it would be easy to compare the output of different batteries, and the author suggested that a special cut-off point curve for use with motor vehicles based upon constant watt discharges should be determined.

The defects of the negative pasted plate were then considered, and the author stated that, in his opinion, the deterioration in the negative active matter was due to the fact that sulphate of lead is soluble in strong sulphuric acid. The author carefully traced the reaction which takes place in a negative electrode during charge and discharge, and showed that the concentrated acid within the plate is the medium for the continual transference of matter from the interior of the plate to nearer the surface, thus clogging up the pores and preventing the access of electrolyte to the interior. The author stated it as his opinion that it was of importance that long attenuated pores in the plate must be done away with in some way.

The author then gave an historical sketch of the accumulator as far as relates to cells of a compact nature, and to electrodes that retain a large quantity of the electrolyte within themselves, and therefore have not attenuated pores, but in which the active matter itself is not necessarily porous, under four headings:—(1) Solid cell, in which access to electrolyte is not provided for. (2) Cells of the "multiple-unit" pasted-plate type, in which an attempt is made to deal with the electrolyte difficulty. (3) Cells without plates of the solid network type, in which the solidity of the cell and access of active matter to electrolyte are both dealt with. (4) Cells without plates of the solid network type, in which the electrodes consist of non-conducting networks covered with a film only of active matter.

After directing attention to the various stages of development of the network type of cell, the conclusion arrived at by the author was that immediate future developments would be in the direction of electrodes which contain the electrolyte within themselves.

## CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this. KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

# The DEVON FIRE

Reg. No. 437730.

## FIRST PLACE in TESTS

### The DEVON FIRE.

Report in "Lancet," May 19, 1906:—

"As a final result of the whole of the tests, the examiners find that of the grates submitted, those of Messrs. Candy & Co. and two other firms are the best, showing practically equal results.

"The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained: the fires were bright and clear." W.N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

HIGHEST AWARD and MEDAL at the 1906 (Bristol) EXHIBITION of the ROYAL SANITARY EXHIBITION.

Architects, Contractors, and others are recommended to journey by the

## GREAT CENTRAL RAILWAY.

They will find it

### RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system. Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

EARLESTOWN.—Nov. 30.—The Newton-in-Makerfield Urban District Council invite competitive plans for erection of a public library, the total cost, exclusive of site, not to exceed 4,000l. Mr. C. Cole, clerk, Town Hall, Earlestown, Lancs.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

WOLVERHAMPTON.—Dec. 31.—The Board of Management of the Wolverhampton and Staffordshire general hospital, Wolverhampton, invite competitive designs for a nurses' home adjoining the hospital. Mr. J. Stephen Neil, house governor and secretary.

WORTHING.—Nov. 20.—For carrying-out an addition to Swandean House, Durrington. Mr. Frank Roberts, borough engineer and surveyor, Municipal Buildings.

RAPHAEL HOUSE, with its constant striving after new ideas and new ideals in the realm of art, is again very much *en evidence* with an excellent collection of Christmas and New Year cards, books and calendars, emanating from the well-known firm of publishers, Messrs. Raphael Tuck & Sons, Ltd., whose achievements are in advance of all that has hitherto been accomplished in this particular line, comprising as it does several thousand distinct designs. The variety of productions is surprising, and it would seem almost invidious to allude to particular ones where nearly all are of such a high standard. The calendars, however, are specially deserving of notice, forming as they do dainty works of art, which will grace many homes during the coming year. Nor should mention be omitted of the picture post-cards, of which beautiful missives the firm in question are the acknowledged pioneers. Father Tuck's famous "Annual," too, is again a commendable production, and in the way of novelties the "half-masks" will serve for many a festive and merry occasion. Taken altogether the art missives from Raphael House should tend to increase the joy and pleasure of life, and they will be doubtless appreciated the world over.

**TRADE NOTES.**

MESSRS. WM. POTTS & SONS, of Leeds and Newcastle-on-Tyne, have just erected a new clock with two large external dials at Messrs. Watson & Sons, Ltd., Whitehall Soap Works, Leeds, to the order of the directors.

MESSRS. JOHN PICKLES & SON, saw-mill engineers, of Hebden Bridge, have taken up the manufacture of improved machinery for the manufacture of hollow concrete or cement blocks. These new machines can turn out blocks 16 inches long by 10 inches wide and 8 inches deep to the extent of 200 blocks per day.

THOSE who require accuracy in technical reports or in copies of technical documents can be recommended to have recourse to the Metropolitan Reporting and Typewriting offices, 32 Chancery Lane, W.C. The charges are fixed and moderate, and the arrangements are adapted to suit the convenience of clients.

THE Southend Borough Council have decided to expend 8,400l. in enlarging the sanatorium.

## BUILDING AND BUILDERS.

CONSIDERABLE alterations and improvements are contemplated at the Royal Bucks Hospital, Aylesbury.

THE cost of the new science buildings at Charterhouse, Guildford, is estimated to be about eleven thousand pounds.

MR. W. J. HODGSON, C.E., of Camberley, was successful in a limited competition for designs for Sunday schools for the Wesleyan church at Bagshot, Surrey.

THE Birmingham City Council on Tuesday authorised the baths and parks committee to obtain plans from certain selected architects for the erection of baths in Nechells Park Road at an estimated cost of 21,995*l.*, including the engineering plant. In the estimate of cost 1,558*l.* is put down for architect's charges, &c.

At the Auction Mart the site of Nos. 7 and 8 Poultry, extending through into Bucklersbury, with a frontage to each thoroughfare of over 30 feet, and covering the superficial area of 2,700 feet, was let on a building lease for eighty years. The ground rent obtained was 2,000*l.* a year, representing at thirty years' purchase a capital value of 60,000*l.* for the freehold.

THE Company of Plumbers held an examination on the 10th inst. at King's College, London, for those desirous of qualifying for registration. About thirty master and operative plumbers attended, and of this number eight were successful. The practical examinations included tests in lead-bossing and joint-wiping as required for best sanitary work, and the written and oral examinations were on the subjects of house sanitation, drainage, ventilation and the connection of pure water to domestic dwellings.

THE London County Council on Tuesday rejected the recommendation of the Building Act committee that the standing orders should be suspended to enable the Council to consider the question of applying in the next session of Parliament for the amendment of the London Building Acts so far as might be necessary to alter the constitution and duties of the Tribunal of Appeal, and to enable the Council to establish a satisfactory system of payment of district surveyors by salaries.

THE Durham education committee recommend the County Council that new schools be provided at Murton

Colliery and Benfieldside to replace the present unsatisfactory buildings, also that a school be provided at Cold Hesledon which has not at present any convenient school accommodation, that a school to accommodate 250 infants be erected at Willington, that the present school at Chilton Buildings be enlarged by adding a new wing for about 100 scholars and to build a new infants' school for about 200 children, and that a new school be provided large enough to supply the increasing needs of the district of Old Cornforth.

## ELECTRIC NOTES.

THE Somerset Electric Power Company have offered the Bath Corporation to purchase their electric-light undertaking, which has not been a successful venture. The price mentioned is 200,000*l.*

THE Corporation of Cardiff, with a view to push their electrical undertaking, have issued a booklet to the public which, among other matters, deals with the colours of wall-papers in relation to their reflecting powers.

THE main signal box at Crewe station has been opened. It is claimed to be the largest worked by electricity in the world. Nearly 500 men were engaged in moving the points necessary for the change from physical to electric communication. The new box will cover the Manchester, Liverpool and Chester lines. The extensive signals at London Road, Manchester, are to be next electrified.

MR. J. W. EWART, in a paper on "Electric Arc Lighting," read before the Birmingham and District Electric Club on Saturday, commented upon the present craze of some shopkeepers to substitute intense glare and brilliancy for good even illumination. Arc lamps of all kinds, he contended, were too conspicuous in all window-lighting schemes. He described the use of reflectors and shades, which should be designed to shield the light from the eyes and reflect it on to the goods displayed in the windows. The best examples of effective lighting schemes were, he said, to be seen on the stage, where the source of all light was always kept well out of the field of vision. He thought tradespeople would do well to follow this rule.

SUMMER DRIED SEASONED BATH STONE FOR WINTER USE.

THE Worcester City Council recently obtained tenders for the supply of new plant at the Hylton Road station. The lowest tenders were Messrs. Siemens Bros., amounting to 4,231*l.*, and the Electric Construction Company, 4,134*l.* The committee recommend the Council to accept the tender of the Electric Construction Company, Ltd., of Wolverhampton, for the supply of two 300-360 K.W. alternators, complete with exciter and coupled to two 350-440 K.W. engines, of Bellis & Morcom's make, with additional spares, fixed at the Hylton Road generating station for 4,134*l.*, subject to the Local Government Board sanctioning a loan for the purpose.

THE London County Council have adopted the recommendation of the highways committee that the Council should supply electrical energy in bulk to the entire County of London, and to adjoining boroughs and districts, at an estimated outlay of 18,000,000*l.* Of this sum 14,000,000*l.* would be required to take over the companies' undertakings throughout the area of supply, and 4,000,000*l.* for land, plant and transmission. An amendment "that the Council declines to embark upon so speculative an undertaking as that of compulsory supply of electrical energy to the district indicated," was lost by a large majority.

THE opening meeting of the Institution of Electrical Engineers' session was held on the 8th inst. at the Institution of Civil Engineers, at which the new president, Dr. R. T. Glazebrook, delivered his inaugural address. The following awards were announced:—The Institution premium, value 25*l.*, to V. A. Fynn; the Paris electrical exhibition premium, value 20*l.*, to Professor A. Schwartz and W. H. N. James; an extra premium, value 10*l.*, to H. T. Harrison, to W. J. A. London, to Dr. D. K. Morris and G. A. Lister, and to R. N. Tweedy and H. Dudgeon; an original communication premium, value 10*l.*, to Dr. W. E. Sumpner; the first student's premium, value 10*l.*, to A. G. Ellis; the second student's premium, value 8*l.*, to H. W. Taylor; the third student's premium, value 5*l.*, to F. C. Prentice and J. S. Westerdale; an extra premium, value 5*l.*, to W. Browning; Salomon's scholarship, value 50*l.*, to R. C. Jakeman; David Hughes scholarship, value 50*l.*, to A. Kinnes and G. F. O'Dell.

A BILL is about to be promoted by manufacturers and others in Cheshire to supply electricity in bulk to local

authorities and persons requiring a supply for power. A Bill seeking authority to supply both electricity and power-gas was recently considered by a select committee. Owing to the strong opposition by property-owners to the erection of additional gasworks, the Bill in the first House was thrown out. In the present promotion it is not intended to seek powers for the supply of power-gas, but only electricity, and to acquire by agreement existing undertakings. The area which it is proposed to supply was originally included in the North-Western Electricity and Power-Gas Bill, which received Royal assent in 1903, including North Staffordshire, Flint and Denbigh. In this district, particularly Staffordshire, it has been demonstrated that power-gas can be used for the staple trade of the Potteries, and it is thought that in a few years by the introduction and adoption of this means of heating the trade will receive considerable benefit. It is proposed to supply current from at least six power stations within the area, situate on suitable sites, so that the outlying rural districts and more remote towns and villages will be able to avail themselves of a supply of electrical current, and so place these localities on the same level as large towns obtaining the advantages of production on the largest scale.

### VARIETIES.

THE residents and visitors of Le Touquet and Paris-Plage have decided to build an English church to serve the needs of both places. The French syndicate has given a site worth 800*l.*, and Mr. Blomfield Jackson has the plans in hand.

A DEPUTATION from Brussels arrived last week in England for the purpose of investigating the workmen's dwellings erected in London, Liverpool, Manchester and Sheffield.

AT the last meeting of the Hornsey (London) Borough Council a letter was read from the Local Government Board refusing to sanction a scheme for building a town hall, estimated to cost 200,000*l.*

A LOCAL GOVERNMENT BOARD inspector has held an inquiry at Newcastle into an application by the city Council for sanction to borrow 3,913*l.* for alterations to the Grainger arcade at the markets.

Mr. C. CARKEEK JAMES has been instructed by the Egyptian Government to report on the sanitary improvements desirable at Cairo. It is believed that the provision of a drainage scheme would cost £5,000,000.

A LOCAL GOVERNMENT BOARD inquiry was held in Maidstone on Friday. The Corporation wish to borrow 9,500*l.* for the erection of a police station, 4,600*l.* for the erection of a depot and stables, and other sums making in all 15,454*l.*

The St. Helens Town Council have answered in the negative the question of Messrs. John Swallow & Co., who asked whether, in the event of large engineering works being established in the Sutton district, they would be exempted from rates to the end of 1910.

The Metropolitan Water Board have sanctioned estimates of 548,000*l.* for the construction of one of the storage reservoirs in the Lea Valley authorised by the East London Waterworks Act of 1900, and of 250,000*l.* for the building of a reservoir on the Board's property at Island Barn.

The plans for the new building which is to accommodate Henshaw's blind asylum, Lancashire, are to be ready in a month. They should have been ready now, but the architects who are competing for the three prizes offered for the best plans have asked for an extension of time, and this the Board of Governors has allowed.

The Cheshire County surveyor has reported that a certain length of road at Tott, near Knutsford, was only newly macadamised last year, and was in perfectly good

order, and would have lasted five years or longer if it had not been broken up and become positively ruined by the action of the dust-laying materials. The County Council have agreed to carry out repairs at a cost of 600*l.*

PENDING the approval of the building scheme for the proposed offices of the Royal Liver Society on a portion of the George's Dock site, Liverpool, plans and specifications of the offices are being prepared by Mr. W. Aubrey Thomas, 14 Dale Street, who has been appointed architect. The quantities will be taken out by Messrs. Richard Holt, 8 Victoria Street, and H. L. Goldsmith, 62 Dale Street.

THE Cannock Rural and District Councils have agreed to the erection of a permanent hospital at a cost of about 2,500*l.* on land to be leased from Lord Hatherton, at Pye Green, for twenty-eight years. Mr. H. M. Whitehead, surveyor to the Rural District Council, is to prepare the necessary plans. The loan is to be borrowed for thirty years.

THE sub-committee of the West Hartlepool education committee report that it would be necessary to build a secondary school for girls with places for 300 scholars and to make provision for extension. They will report definitely at an early date on the question of a site. It was decided to have plans prepared for an extension of the technical college and to reserve further land for future extension.

WHAT is believed to be the smallest inhabited house in Great Britain is to be seen at Llandyssul, South Wales. Built by the owner, a bachelor, who occupies it, it has a frontage of 5½ feet, is 6 feet from front to back, 6 feet from ground to eaves and about 4 feet more to the ridge. Near it is his carpenter's shop, which measures only a little more than the house, having an 8-foot frontage. From front to back it is 7 feet, to eaves 8 feet, and to ridge about 12 feet.

THE Portsmouth Town Council have ascertained that the power to acquire and use the South Parade Pier can be obtained by provisional order, and that therefore an Act of Parliament is not absolutely necessary. Instructions have therefore been given for the necessary application to be made for a provisional order for acquiring and maintaining the South Parade Pier. It is hoped by this course to save the sum of 500*l.*

At a meeting of the Redditch Urban District Council a scheme was considered for the provision of a refuse destructor for the town. Mr. A. J. Dickinson, the surveyor, presented an estimate, from which it appeared a two-cell destructor would cost about 3,250*l.*, this including repayment of loan and interest. The cost of disposal with the destructor, the surveyor estimated, would be 98*l.* 10*s.* a year, but against that would be a credit of 270*l.* A resolution was passed deciding upon the provision of a destructor at an estimated cost of 3,250*l.*, to be erected on a site near the electric-lighting station.

THE conference on Monday of the Medical Society of London adopted the following resolution:—"That this conference of medical men desires to record its conviction that the present stress of noise in the public thoroughfares of London is such as to cause disastrous consequences to the health and vitality of the people, and that legislation in respect to the growing evil of street noises was urgently needed and should be promoted without delay." Another resolution called for legislation to prevent all street noises, for the effective supervision and control as to speed and otherwise of all classes of vehicles, and for the entire prohibition of noisy traffic through purely residential streets at least between midnight and 6 A.M.

AN arbitration was opened at Westminster to determine the price to be paid by the Leeds Corporation for the acquisition of lands in the Laverton, Carlesmoor, Colsterdale and Leighton valleys, for the purpose of extending the municipal waterworks undertaking under powers conferred by the Act of 1901. There are seven claimants. Mr. J. T. Wood sat as umpire, with Mr. L. Clare as arbitrator for the claimants, and Mr. C. Gott as arbitrator for the Corporation. The parties were represented by Mr. Freeman, K.C., and Mr. C. C. Hutchinson; and the Corporation by Mr. Honoratus Lloyd, K.C., and Mr. Jeeves. It is understood that the claims against Leeds involved in the arbitration amount to 61,250*l.*

DR. THORPE (Government analyst) says, with reference to the water supply of London, that in 1905 the West Middlesex and Grand Junction portions of it occupied the highest position in respect of organic purity. This improvement has been brought about through these works being able to

make use of the water from the large reservoirs at Staines. He hopes that in the near future the Staines storage system will be extended, so that other works may enjoy the advantage of operating with the impounded water, and thus further improve the general quality of the London supply. At the same time he has arrived at the general conclusion that the maximum pollution of the Thames-derived water is declining, a result partly brought about by the progressive provision and utilisation of stored water at the metropolitan waterworks.

AMONG the cases entered for hearing at the Manchester Civil Court (Mr. Justice A. T. Lawrence presiding) by special jury is that of Kellett v. the Mayor and Corporation of Stockport. On this Mr. Langdon, K.C., made an application to his Lordship on the 9th inst. The case, he said (involving matters in dispute with reference to the Kinder waterworks of the Stockport Corporation), was a heavy one and might occupy a considerable time. Mr. Rufus Isaacs, K.C., was to lead him (Mr. Langdon) for the plaintiff, Mr. Pickford, K.C., with Mr. Sutton, being for the defendants, and it would be a convenience to everyone if his Lordship would say that the case should not be called on before Saturday, the 17th inst. All parties assenting, his Lordship ordered the case to be entered for that date.

AN unusual application was made at a Local Government Board inquiry at Wood Green, when the local authority asked for sanction to borrow several thousands of pounds for private street improvement. The clerk to the district council informed the inspector that a large number of people in Wood Green were men with not very substantial incomes who bought their houses through building societies. The road-making charges were a heavy burden, inasmuch as the loan only covered a period of four years. The consequence was that not only did the frontagers suffer, but the council also, because prompt payment under the circumstances was impossible. He therefore applied for the loan to be extended over a period of seven years. The inspector said the application was a most unusual one, but he thought the council had made out a strong case. He should report to the Local Government Board accordingly.

MR. EVANS SPICER, chairman of the London County Council, in his review of the year up to March 31, says:—

The Council's operations in connection with the execution of its works without the intervention of a contractor continued to prove satisfactory during the year. The statements of works completed show a balance of cost below certificated value as regards estimated works of 80,376*l.* and as regards jobbing works of 3,742*l.* All the constructional works in connection with the formation of Kingsway and Aldwych and the tramway subway under those thoroughfares were entrusted to the works committee for execution, and were completed at a total cost of 273,653*l.* or 55,160*l.* below the final certificate of work executed.

THE deputation from the National Housing Reform Council, which recently waited on Sir H. Campbell-Bannerman and Mr. John Burns, M.P., submitted a series of proposals under twelve heads:—(1) That local authorities should be stimulated to carry out their duties under the Health and Housing Acts; (2) that there should be compulsory house-to-house inspection under the auspices of every local authority; (3) closing and demolition of unhealthy dwellings; (4) clearance of slum areas (the deputation considered that the owner of slum property which is dangerous to human health should be treated in the same way as the owner of diseased meat); (5) the creation of model suburbs; (6) increased facilities to local authorities for acquiring land; (7) cheapened and simplified process for compulsory purchase of land; (8) appointment of a town and village development commission; (9) small holdings developments; (10) town extension planning by local authorities; (11) cheaper loans to local authorities; (12) revision of by-laws as to gardens, new roads and unnecessary expense in construction of buildings.

THE city of Damascus is being provided with a tramway system. The present plans involve the construction of some 3½ miles of lines in the city, one-half of which is reported as already laid, with subsequent additions up to a total system of 5 miles in length. Power will be obtained from falls some 22 miles distant, where the works are already well advanced. The work is in the hands of a French company.

### DAMP PREVENTION.

PATERSON'S bitumen damp course, which has been introduced by Johnson & Phillips, Ltd., is well adapted for its purpose. It is produced in rolls of 2 inch and 1½ inch in thickness, in lengths of 24 feet, the width varying from 4½ inches to 36 inches. It can therefore be used as strips or to cover large areas. Its flexibility adapts it to all changes of level. As neither pitch nor tar have been used in the composition its endurance is assured. It can be used also in connection with roofs, and there is no difficulty in making watertight joints. It has been largely employed for municipal work and has given general satisfaction. Its cheapness can be judged when it is said that a roll measuring 24 feet by 3 feet by 2 inch can be purchased for 1*s.*

### ELECTRIC-LIGHT WIRING.

THE screwed steel conduit system for electric-light wiring is now employed by Messrs. Strode & Co. in a variety of buildings, one of the latest being in the Naval College at Dartmouth. One of the advantages of the system is that all the tubes can be fixed during construction, and concealed in the walls, floors and ceilings, so that the decorative treatment of rooms is not interfered with. The joints being made with screwed sockets, the whole system is made watertight, as well as affording perfect protection for the cables and wires against all kinds of injury. The cables and wires can be drawn into the conduits at any time, and are always accessible by means of drawing-in boxes provided. The best arrangement of these drawing-in boxes, and the proper setting out of the runs of the various tubes, is only arrived at by expert knowledge. It is also essential to make a continuous metallic connection throughout between the tubes, boxes, switchboards, fuse-boards, &c., so that the whole system is earthed. If properly carried out this system will be found to be safe, protective, permanent and fireproof. At the Savoy Hotel over fifty miles of steel conduit have been installed. The electric bells, wiring, telephones and fire alarms were also carried out on the same system.

**NON-INFLAMMABLE WOOD.**

THE American Consul at Bordeaux, in a report to the Washington Bureau of Manufactures, says that, warned by the great damage caused by the recent fire at the Milan Exposition, the French Deputy Commissioner-General devoted much of his time to the study and investigation of the different methods of rendering wood, paper, silk, cotton and woollen stuffs non-inflammable. He decided to experiment with a mixture consisting of sulphate of ammonia, 135 grams; borate of soda, 15 grams; boric acid, 5 grams; and water, 1,000 grams; and with this he treated pine shavings, wood, paper and cotton fibre. After a thorough drying the pile was set on fire, and when the fire had exhausted itself the impregnated shavings and wood were found to be simply blackened and charred; they gave out no flame. Paper and cotton fibre treated with the same solution consumed very slowly without a blaze. So successful and conclusive seemed the demonstration that orders were given that all wood and timber used in the construction of the buildings for the forthcoming Bordeaux Exposition, and all cotton, canvas and linen stuffs, carpets and rugs employed in the furnishing should be treated with this mixture.

**INSANITARY AREAS.**

In the thirty-fourth annual report of the medical officer of the Local Government Board he says:—"It is satisfactory to note the comparatively few occasions on which the visit of an inspector has been concerned with sanitary administration in connection with smallpox. In 1904-5 these visits numbered only twenty, whereas in 1903-4 and 1902-3 they were thirty-six and 124 respectively. The diminution here indicated of central intervention in matters of local administration is, however, to be referred, as far as many rural and most minor urban districts are concerned, almost wholly to the subsidence of smallpox, not to any general improvement in the methods of sanitary administration and infectious disease prevention adopted by the authorities of such districts. There had been found, indeed, as a result of visits by inspectors to districts of this class on account of smallpox, serious grounds for suspecting in not a few instances much neglect of sanitary matters generally on the

part of the authority and its officers. Accordingly, in 1904-5 opportunity was taken so far as the resources of the Board's medical staff have permitted, to investigate the sanitary state and administration of rural and urban districts in various directions throughout the country. About a dozen separate administrative areas, mainly small urban districts, have come specially under scrutiny during the year, and with results which are far from encouraging."

After mentioning certain districts where investigation had been made, the report continues:—"It is a matter for serious consideration whether the creation of small urban districts is in the true interests of efficient sanitary administration. Subdivision of administrative districts leads, in the aggregate, to larger disbursements in the way of salaries, due to the multiplication of officers, and in the way of office accommodation for these and for the local authority. To justify this increased expenditure the counterbalancing consideration should be increase of administrative efficiency. In districts that, after subdivision, still remain of considerable importance, this result may perhaps be attained, but it may be apprehended that a point of subdivision is not infrequently reached at which the increased expenditure is accompanied by diminished efficiency. At what point as indicated by the population the dividing line between increase and decrease of such efficiency is reached may be a question not easily determined—one to be decided not by an arbitrary standard of population alone, but by other considerations of a local nature."

**NEW STREET STATION ROOF, BIRMINGHAM.**

THE collapse of a large portion of the roof of Charing Cross Station about a year ago caused questions to be raised respecting the security of that which covers the original portion of New Street Station, Birmingham. At a meeting of the shareholders of the London and North-Western Railway shortly after the Charing Cross disaster the chairman stated that it should be the subject of careful examination. As a matter of fact, says the *Birmingham Daily Post*, this roof is continually under inspection, as one part or another is always undergoing painting for the protection of the ironwork against corrosion. During the present year, however, a complete overhauling has been in progress, every

portion of the metalwork and every rivet being minutely examined. The roof is practically fifty-three years old, and at the time of its construction was regarded as a remarkable example of engineering. With a length of 1,080 feet it has a single girder span of 212 feet at a height of 75 feet from the rails. It was for a long time the largest single-span roof in the world. The ends of the girders rest upon substantial iron columns, those upon the New Street side being partly enclosed with masonry. The form of girder is a singularly beautiful one, consisting first of an elliptical double T of wrought-iron, which gives the roof its outline. Beneath this is a thick cylindrical tie-rod, also arched, and connected with the upper portion by twelve upright trusses of latticework, the intervals between each upright being crossed by tension straps. It is a very elegant form of construction, and has excited much admiration.

The examination which has recently been carried out by the company's engineer shows that the roof has worn remarkably well and is still perfectly secure. A good deal, however, has been learned during the last half century respecting the behaviour of metals under tension and compression, and, in order to provide an ample margin of security, as well as to add to the ultimate life of the roof, it has been deemed desirable to incur an expenditure of several thousand pounds in its reinforcement. For some months work has been going in connection with the reconstruction of the wind screen at the south end of the station, which has naturally had to bear the brunt of exposure to all sorts of trying conditions. This somewhat difficult undertaking is well advanced. The removal of the sheeting for the protection of workmen has revealed what is being done to counteract any tendency to spreading in connection with the roof girders. To each of these there is being applied a supplementary tie-bar or double strap of steel extending from foot to foot of the girder at a distance of about 5 feet or so below the centre of the original tie-bar, and braced up into a slightly arched form by rods depending from the main arch upon each side of the upright trusses. The use of pneumatic tools enables this work to be done with a celerity which would not have been possible a few years ago. Up above an opening of the roof near the supporting columns in the private road of the station there has been constructed a platform upon which is placed the engine

working the compression apparatus, and elastic tubes are carried along the scaffolding to the spot at which the riveting of the lengths of steel is carried on. Two of the reinforced girders are now fully exposed to view opposite to the Queen's Hotel portion of the station. It is seen that the effect will be to make the roofwork look a little more complicated and a little lower than at present, but the operation of and the reason for the device is obvious. The platform for another engine and apparatus is being erected nearer to Navigation Street, so that the work may be carried on in two sections. It will, however, take about six months to complete.

### BUILDING A HOUSE IN MALABAR.

WHEN a Malayalee starts to build himself a house, he is not particular how long it takes before the house is ready for occupation, says *Indian Engineering*, but he exercises every possible precaution, which his astrologers and his shastras lay down, to preclude the least ill-luck eventuating on the building. First and foremost there is a world of fuss as to the selection of a desirable site. On no account should a house be constructed on land the eastern side of which is bounded by a temple, a serpent grove, a demon shrine, or other place of worship. The compound must have a certain particular aspect, and its south-eastern arm should stretch out to a greater length than the other parts, and the structure itself should not stand in the centre of the compound, but on some spot decided upon after an abstruse geometrical calculation. An auspicious moment for the tree-felling having been found and the felling having been duly carried out, the tree is sawn up and worked out into the various shapes required, after which the astrologer is again sent for, in order to fix a day for planting the four corner posts of the building. The work of construction proceeds slowly, a hideous image, a glass bottle, a cactus branch or some other substances being hung up in a conspicuous place, with the view of averting the evil eye. The walls and woodwork being over, the thatching has to be taken in hand, and for this again an auspicious moment has to be ascertained and fixed.

There is, then, the other important question of a site for the well. A diviner must be called in to find a favourable

spot for the sinking of the well. A house built in the regular orthodox fashion will invariably face the east. Other cardinal points may be faced, but the south is avoided under any circumstances. Why an eastern prospect is so highly prized is because it enables the sun to enter the house through the front door. Yet another little ceremony consists in applying a lighted torch to a corner of the roof immediately after the thatching. It is assumed that the house, having hereby taken fire once, will ever after enjoy immunity from destruction by the devastating firegod. The Mahyalee will not willingly grow a casuarina tree in his grounds, it being considered dreadfully unlucky. A jessamine bower cannot be put up in front of the building, for it will fast become the abode of an evil spirit. The flame of the forest is another unlucky tree, the planting of which would bring about the early death of the owner.

### FLOOR SPACE IN SCHOOLS.

In the House of Commons last week Dr. Macnamara asked the President of the Board of Education if he could state the practice of the Board in the matter of the number of square feet of floor space to be allocated to each child in the planning of new schools, Council and non-provided; whether it was the practice to permit existing Council and non-provided schools to accommodate children on any other scale; if so, whether he would state that scale and the extent to which it was now in operation; and if he would consider the desirableness in the interests of the health and comfort of the children and of educational efficiency, of insisting upon at least a 10 square feet scale all round? Mr. Birrell, in reply, said the aim of the Board of Education is to secure for each child in a public elementary school 10 square feet of floor space. In the case of new schools or enlargements their practice now is always to insist on this, and as regards existing schools they endeavour to bring about the same state of things. But in exercising pressure to this end some regard has to be paid to the heavy burden that would be placed upon the rates by any sudden demand for so large an increase of school provision as would be entailed by a universal application of a 10-feet scale, that burden being already in many places

very severe. The scale recognised in former days for Board schools and voluntary schools alike was 8 square feet for each child, and this no doubt obtains, so far as nominal accommodation is concerned, in a large number of schools, both Council and voluntary. But, on the other hand, it must be remembered that very many schools, though calculated on the 8 feet square basis, do in fact afford much more than 8 square feet for each child, owing to the number of children attending them being much less than the nominal accommodation.

### PAVING IN EDINBURGH.

A STATEMENT has been presented to the members of the streets and buildings committee of the Edinburgh Corporation by Councillor David Grieve on the work of that committee during the five years of his convenership, which he resigns on his retirement from the Council next month.

Edinburgh is perhaps distinguished among larger cities by the general hilliness of its site and the great breadth of many of its carriageways. Unusually large areas of paving have to be dealt with and maintained, and these are frequently of steep inclination, entailing much extra wear from horse's hoof and wheel-drag. It would appear, therefore, that the only practicable paving for most lines of heavy traffic must be the hardest, non-slippery stone procurable. There are some strong objections against stone paving. One of these is that, apart from their noise, stones form one of the roughest of wheel-paths for the vehicle, and add greatly to its draught. With the view of meeting this defect, the old idea of a smooth stone tramway for wheels was revived three years ago in Elm Row, and with considerable success. The noise and vibration of traffic over stone paving has developed so much in these days that the demand in all much used thoroughfares is for a paving substance less rigid than stone. For this cause various kinds of wood paving have been on trial within the past few years, including Scottish beech, Russian redwood and hardwood from Australia (in three varieties). Wood has sufficiently solved the noise problem, but has brought its own defects. These are—more or less rapid wear and decay, expansion and the need of frequent gravelling for horses. The Australian varieties of hardwood promise a much longer

life than the softer woods anywhere tried, and in Princes and Rutland Streets have entirely supplanted the latter during the past five years.

Hardwood blocks have been put down almost every year since 1897, and in rare cases has any sign of decay yet appeared, whilst the average wear under heaviest traffic has only been barely 1-16th of an inch per year. During the period under review this material has been laid at the following places, viz. Princes Street (completing of east and west-end paving), Rutland Street, Queensferry Street, Lothian Road, North Bridge (at Post Office and *Scotsman*), South Bridge (east side, opposite University), Nicolson Street, George Street, St. Andrew Square, Morningside Road, Dalry Road, Gorgie Road, Warrender Park Road, Lockhart Bridge, West Maitland Street and George IV. Bridge. The principal bar to the more general adoption of hardwood paving is its excessive first cost. In March 1904 a deputation, formed by Treasurer Brown, Mr. Grieve and Mr. Sim, was sent southwards to the principal English towns to reap the benefit of their experience with wood or other noiseless paving, and find, if possible, a cheaper market for the purchase of hardwood. The net results of this deputation's visits were:—(1) A reduction of about 3/ per 1,000 blocks (or 20 per cent.) on that year's purchases, and (2) considerable improvements in the laying of the blocks and the plant and tools employed. In March of the following year the same parties, adding Councillor Macarthy, were sent again to England on the same subject, and gained additional valuable information from what they saw in London, Nottingham and Newcastle, and from interviews with experts. They also arranged advantageous purchases of the wood required that season.

But, in paving experiments, the committee have been content to limit themselves to wood alone. In February last they instructed the surveyor to inquire as to other smooth pavings which might be tested in selected streets with reasonable prospects of advantage. As one result of these inquiries, they laid this year in East Fountain Bridge, Manor Place and Cowgate the most approved form of compressed rock-asphalte. This is considerably cheaper and more cleanly than hardwood, and does not, like it, give trouble by after expansion. As to asphalt's alleged slipperiness in certain weathers, there has as yet been little

or no gravel called for on these surfaces. A second result of the surveyor's inquiries was the obtaining of estimates for composite asphalt and tar-macadam to suit the lighter classes of traffic, and the old causeway of Eton Terrace and Lennox Street has been replaced by tar-macadam of a special manufacture for which exceptional merit is claimed. Sufficient time has not yet elapsed for forming opinions about this paving. It is possible that this latest experiment is some contribution towards solving the problem of a dustless highway. The initial cost of a surface of tar-macadam is just double that of a full top coat of ordinary macadam. Should the life of the first be twice as long there ought to follow a great extension of its use, at least in the quieter residential streets. In connection with the dust question, during these two last summers the committee have co-operated with Leith in tar-coating the macadam of Ferry Road, and this annual treatment has had the effect of keeping down dust while the dryer season lasted. The opinions he had formed as to the materials which should now be more extensively adopted were:—(a) Australian or other similar hardwood (preferably black butt) for close-built tramway routes, with heavy traffic and grades not over 1 in 23; (b) compressed rock asphalt for other close-built non-tramway routes, with heavy traffic, where the grade is small; and (c) tar-macadam for close-built residential streets, of light traffic and moderate grade. The general condition of our carriageways, as of our foot pavements, would bear comparison at the present moment with those of any city in the kingdom. The macadamised roads, in particular, have been all reshaped in the past five years, and are now in splendid order. Co-operation between the city road surveyor and the various street-disturbing authorities to keep down repeated openings of the surface has been vigorously maintained. During his term of chairmanship these streets have withstood the installation of a great system of underground telephones. They have also been extensively cut up for the distributing mains occasioned by the Talla water supply, for the gas mains from Granton, the post-office telegraphs, and the substitution of valve for ball hydrants. Yet, notwithstanding all these special elements of disturbance, added to the ordinary openings contended with, the surfaces have been maintained in an increasingly high state of repair.

## Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does **not** require expensive pressure-plant; does **not** reduce the mechanical efficiency of the timber; does **not** increase the liability of the wood to inflame; does **not** render the wood poisonous to human beings or domestic animals; and does **not** leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW;  
and 6 Crosby Square, LONDON.

**WORKMEN'S COMPENSATION.**

THE annual meeting of the Birmingham Master Builders' Association was held on Monday under the presidency of Mr. J. B. Whitehouse. In the course of his address he called attention to the amendment of the Workmen's Compensation Act. The present law was, he said, so incomplete, so full of defects, and so badly drawn that neither masters nor men were secure under its provisions. It had been rightly termed, from the vast amount of litigation that had taken place, the Lawyers' Compensation Act. What they wanted was a complete Act. They were in agreement that some compensation should be paid to a workman if he met with an accident in the course of his employment. They wanted the man to feel that he was safe, and they wanted, on the other hand, to feel that they were protected. He should like to quote a case where the present Act was not a good one. They would take a small employer with very little capital who did not insure, and one of whose workmen met with a serious accident. The workman was entitled by law to compensation from that employer, but the latter was not insured, and had nothing; the position of the man was then a bad one. If it was a case of total disablement he was in a precarious position for the whole of his life. If it was a fatal accident, then it was hard lines on the widow and children. The Government had said nothing in the present Bill to remedy many of the defects which were known to exist under the present law. There was nothing about compulsory insurance, but that alone would not be sufficient, because if they took the case he had just quoted, and granted that the employer had been insured, he was sorry to say there were too many insurance companies who were prepared to take the premiums, but had no intention to meet their claims and liabilities. They had printed at the back of their policies, in very small type, such as it required a double-power magnifying-glass to read, clauses that rendered void any of the liabilities which might come from those employers upon some technical point. With compulsory insurance alone the man was still in a very bad position. What was required was a Bill containing clauses of compulsory and national insurance. There ought to be compulsory and national insurance because the Government had the powers of obtaining money

cheaper than any other body. Under national insurance it would not matter whether the workman was in the employ of a sub-contractor, chief contractor or an undertaker; he would be entitled to compensation by law, and would be able to receive it without having deductions, as at present, owing to litigation. He was surprised that the trades unionists had not seen the very evil position a large number of men occupied under the present Act, and would occupy under the proposed measure unless it was amended. They were not safeguarded, and the masters, too, were in a false position. It had been said that the Labour members had the Government in the hollow of their hands, and if it was to their advantage to have compulsory and national insurance now was their time to obtain it.

**CHIMNEYS AND FLUES.**

THE following report was adopted at the last annual meeting of the United States National Fire Protection Association:—

Your committee on chimneys and flues has interpreted its subject as meaning all conveyers of heat or the results of combustion, and at the outset we beg to say that we consider this subject as practically an inexhaustible one on account of not only the various classes of flues, but also on account of the unlimited types, constructions, arrangements, purposes and locations of each of the various classes.

Chimneys and flues have been investigated from the standpoint of construction, location and protection by the architect, builder and manufacturer, as well as by the insurance interests until at this time we have these subjects treated of in all building codes, fire ordinances and rulings of the various inspection bureaus in a more or less exhaustive manner, but the variations of temperature in like flues cannot be taken up in these rulings without the writing of volumes upon the question of protection, and so would the consideration of each case of air drafts, ventilation and general surroundings produce volumes of rules and requirements; hence it is that in the various codes and rules each subject has received a general treatment rather than a specific treatment for each condition likely to arise, and it is in this general way, with some attention to specific

questions, that your committee has approached and treated these subjects.

As a general proposition, all heat-conveying flues should be free from all contact with inflammable materials, should have a free ventilating space surrounding them, should be securely built and supported, should be so placed that they can be readily reached so as to clean them off on the tops; the distance from inflammable materials is to a great extent dependent upon the construction of the flue, the temperature of the heat passing through it, and the continuous length of time the heat is passing through.

Specifically, we desire to bring to your notice the following features:—

In all chimneys and flues of brick construction only good, hard, well-burnt brick should be used; soft or "salmon" brick should be prohibited; all joints should be struck smooth on inside, excepting where the flue is lined with well-burnt clay or terra-cotta pipe; no pargeting mortar shall be used on the inside; for bake-ovens, low-pressured boilers and similar purposes the brickwork shall be at least 8 inches in thickness and lined continuously on inside with well-burnt clay or terra-cotta pipe, and be capped with terra-cotta, stone or cast-iron; for high-pressure boilers the brickwork shall be not less than 12 inches in thickness, with the inside 4 inches of this wall built up of firebrick laid in fire-mortar for a distance of 25 feet in any direction from the source of heat; for smelting furnaces or of steam boilers or other apparatus which heat the flues to a high temperature, shall be built with double walls of suitable thickness for the temperature, with an air space between the walls, the inside 4 inches to be of firebrick laid in fire-mortar for a distance of not less than 25 feet in any direction from the source of heat. All other chimney flues shall be lined continuously on the inside with well-burnt clay or terra-cotta pipe made smooth on inside from the bottom of the flue or throat of the fireplace if flue starts from the latter; chimneys not in continual use or in dwellings from fireplaces or stoves, need not be lined, but must be struck smooth on inside. It is not advisable to have any bends or curves requiring a smaller upward inclination than 75 degs., and all curves and bends are to be deprecated. No flue should be less than 8 by 8 inches. No chimney shall be built up from any floor, shelf or beam of a building where

these are of wood. In a frame building where the chimney is not built up from the ground, it should rest on a base of masonry of firebrick set in fire-mortar not less than 12 inches thick, this base resting on supports independent of the construction of the building. In a brick building where the chimney is not built in the wall, it should be built as in similar cases in a frame building, or the wall should be corbelled out so as to support the chimney, which should then be properly anchored into the wall. In a stone or concrete building the treatment should be the same as in a brick building. All unused flue holes in chimneys shall be bricked up or closed with permanent, tightly-fitting metal covers, but no papers, bags, cloths or other inflammable materials must be used for this purpose. Horizontal brick flues should be covered on their tops with neat cement.

In the consideration of the best methods for protecting woodwork and other inflammable materials from the effects of heat from metal heat-conveying flues we are brought face to face with a question of diversified and various aspects, as, for instance, the thickness of the metal, the degree of heat conveyed, the distance from the woodwork, the continuous length of time that heat is being conveyed, air drafts and the amount of ventilation about the flue. The class of protection must be considered and required in conjunction with and is dependent on these conditions. In some places metal shields with air spaces of varying depths on each side will be sufficient; in other places a heavy coating of asbestos on the flue and an air-space between it and the woodwork will answer; in other places the woodwork should be protected with asbestos overlaid with tin following all lines and angles of the woodwork, standard tin clad; but your committee is unable, under the varying conditions, to lay down any one method, and can only recommend that the protection shall be adequate for the conditions involved, and shall consist of practically one of the three above-mentioned methods.

Sheet-metal stove pipes should be prohibited where passing through roofs, sides of buildings where in concealed spaces or where subject to sufficient moisture to cause rusting. Where passing through partitions, floors or other inflammable materials they should be surrounded with thimbles of metal so constructed as to maintain an air space of at least 2 inches between the pipe and the thimble and

Queen Anne's Chambers, Westminster, LONDON.

with ventilating holes so placed as to carry off the heat from within the thimble—or be surrounded with metal pipe and so placed as to maintain a clear space of at least 1½ inches between the smoke-pipe and the surrounding pipe—or be held in a soap-stone collar or well-burnt clay ring of not less than 2 inches in thickness, and so placed that no wood will be within 2 inches of the pipe; should enter the chimney in full sight, fit the chimney hole closely; should not enter a chimney hole within 12 inches of any wooden floor, partition, or of any ceiling other than fire-proof construction, unless there is a metal shield with ventilating space on both sides between the pipe and the woodwork, when the distance may not be less than 8 inches, or if the woodwork is covered with asbestos overlaid with tin standard clad, then the distance may be not less than 2 inches. All joints must be tight.

Tile flues, whether of well-burnt clay or of vitrified tile, should not be used; these are subject to breakage, not only from physical shock, but from the effects of heat, moisture and cold, through contraction and expansion, especially where the variations of these conditions are extreme. If permitted they should not rest upon any wooden shelf, flooring, &c., and should have a space of at least 2 inches between them and all woodwork through which they may pass; they must not be used in concealed space.

Clay pipe flues or chimneys are prohibited.

Any hollow, continuous space in a building constructed of hollow building brick, tile or cement blocks cannot be made use of as a flue or chimney. This practice is extremely dangerous and is prohibited.

Steam pipes should under no condition be allowed in contact with wood or any other inflammable material; where on the side of a room they should be hung on iron hangers of approved design; where overhead they must be hung on iron holders; where on floors they should be supported on bricks, approved iron supports, iron pipes or should be hung from above; where passing through floors the floors must be cut away so as to allow a clear space between the pipes and the wood, and the pipes must be properly bushed; should not be in any location where they cannot be easily reached for the purpose of cleaning all dust, rubbish, &c., from them, such as behind benches,

false flooring, &c.; wherever placed or however hung, they must be permanently fixed so as not to be affected in their position by "hammer," expansion and contraction. The overhead method of steam piping is preferred.

Foundry cupolas should have cast-iron or steel charging floors; should extend at least 10 feet above highest point of any roof within a radius of 50 feet; be covered on top with a heavy wire netting; be capped with a spark arrester, and in all parts be at least 2 feet from all surrounding woodwork.

The size of all dampers in all flues should be limited in area; those in furnace and boiler flues should advisably be of a size of but nine-tenths of the area of the flue opening.

Iron smoke stacks from boilers should not be within 10 inches of any woodwork.

As a summing up of these generalisations we can only point out the fact that the entire matter of safety and protection to the greatest extent lies with the inspector, for, for one building that is being built and in which the architect or builder may be willing to concede the need for care in the construction of these devices, there are hundreds of thousands already built with defective chimneys and flues which need the attention of the proper authorities for their correction; hence it is primarily "up to" the inspection bureaus to apply such rules as we already have.

In addition to the points already brought out we would suggest that—

1. The inspection bureaus give closer supervision of all new buildings, particularly dwellings and others which are subject to cheap construction, and insist to whatever extent they deem justifiable on the application of the building codes of their locations, where there are any, to the bad conditions which may be found being carried out.

2. That all chimneys be cleaned out yearly, at least.

3. That regular rules be insisted upon as to the cleaning of all dust, rubbish, waste, &c., from all steam pipes, and particularly from the tops of all horizontal heat-conveying pipes.

4. That all heat-conveying pipes receive regular inspection in order to see whether they have become loose at the joints, whether they have sprung so as to come in contact with wood, whether they are properly supported.

# Art Plates from "The Architect."

AWARDED GOLD MEDALS, INTERNATIONAL HEALTH EXHIBITION  
AND ARCHITECTURAL AND BUILDING TRADES EXHIBITION (1889).

PROOFS on PLATE PAPER of the following Illustrations which have appeared in "THE ARCHITECT" can now be obtained in a separate form on proof paper suitable for framing.

**The Corn Field.**—(1) Ploughing; (2) Harrowing; (3) Mowing; (4) Carting; (5) The Products of the Corn Field.

In Five Separate Plates. Total Length, 14 ft. 7 in. by 15 in. deep. A splendid example of Colour Work in Permanent Ink Photo. By M. PAUL ALBERT BAUDOUIN. This magnificent Illustration was presented to the Subscribers to "THE ARCHITECT," in 1886. A few proofs were taken which immediately became out of print.

OPINIONS OF THE PRESS.—"We are not surprised to hear that there has been a great demand for the beautiful reproductions of the well-known frieze by M. Paul Albert Baudouin, entitled 'The Corn Field.' The plates have been reproduced by subscription at half a guinea the set, and so great has been their success that a second edition has been issued."—*The Lady's Pictorial*. "They are beautifully done in colours by the permanent ink-photo process and form a very artistic and pleasing set at the extremely moderate price of half a guinea."—*The Stage*. "The well-known frieze entitled 'The Corn Field,' which is a splendid example of colour work in permanent ink photo by M. Paul Albert Baudouin, is to be reproduced by subscription of half a guinea a set. They are exceedingly artistic and would grace the walls of any house."—*The Gentlewoman*. AND NUMEROUS OTHERS.

In consequence of the almost daily demand for these Plates they have been reproduced by Subscription at Half a Guinea the Set, free by post, carefully packed inside patent roller, and are now ready for issuing. Immediate application is requested. May be had framed in Black Reeded Frame with Gold Mounts, price Three Guineas the Set of Five Pieces.

**Galathea.**

From the Painting by RAPHAEL in the Villa Farnesina, Rome.  
Size 30 in. by 22 in. Price Two Shillings. Free by post, carefully packed inside patent roller.

**St. George.**

From the Painting by RAPHAEL, in the Louvre.  
Size 15 in. by 20 in. Price One Shilling and Sixpence. Free by post, carefully packed inside patent roller.

May be obtained from all Newsagents, Booksellers, Messrs. W. H. SMITH & SON'S Bookstalls, or from the  
Publisher, P. A. GILBERT WOOD, Imperial Buildings, Ludgate Circus, London, E.C. (FULL LISTS ON APPLICATION.)

## RAPID TRAVEL IN LUXURY.

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system.

Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

For Index of Advertisers, see page x.

## NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

## EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further

answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

## TENDERS, ETC.

\* \* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

## COMPETITIONS OPEN.

EARLESTOWN.—Nov. 30.—The Newton-in-Makerfield Urban District Council invite competitive plans for erection of a public library, the total cost, exclusive of site, not to exceed 4,000l. Mr. C. Cole, clerk, Town Hall, Earlestown, Lancs.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

IRELAND.—Dec. 31.—The Local Government Board for Ireland invite from architects the submission of designs for labourers' cottages in rural districts. Premiums of 50l., 30l. and 20l. for the three best designs. A copy of the conditions of the competition may be obtained from the Secretary of the Local Government Board, Dublin.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

## TRADE NOTES.

THE Excelsior Patent Stone Company are enlarging their works at Finedon sidings by the addition of three moulding shops measuring about 70 feet square; a new locomotive-shed has also been erected to accommodate the shunting-engines. The company having lately been placed on the approved lists of manufacturers to the War Office, and being on the lists of the Admiralty as well as many other public bodies and corporations, the present additions to their works were necessary in order to cope with the general expansion of their business.

MESSRS. GEORGE MILLS & Co., of Radcliffe, the proprietors of Mills's modified "Titan" sprinkler, have received the following letter relating to the action of their sprinkler in the case of a fire which broke out in an oil store-room:—"9 Murano Place, Edinburgh: November 5, 1906. Dear sirs,—We beg to intimate that on Wednesday, August 8, a fire broke out in our store-room, and what would have been a disastrous fire to us owing to the amount of oils, &c., which we had stored in this place, was extinguished by the quick action of the 'Titan' sprinkler fitted up by your firm, the damage being so slight that we have made no claim against our insurance company. This is the first occasion on which they have come into operation, and we can only say that we are delighted with the way in which they work.—We are, yours faithfully, WM. CUMMINGS & SON."

## NEW CATALOGUE.

THE Simplex Conduit Company have sent us their new pocket price-list, which is of a compact and convenient size. The Simplex Company very naturally are much elated at the fact that the British standard specification for steel conduits for electric wiring, which has been quite recently devised, is practically the Simplex practice, which they have been issuing in their catalogues for years past.

THE members of the Bridge House Estates committee have decided the form of tender for the widening of Blackfriars Bridge.

## ELECTRIC NOTES.

MAJOR TULLOCH, Local Government Board inspector, held an inquiry at the Eastbourne town hall into an application by the Town Council to borrow 10,890*l.* for purposes of electric lighting, and also 500*l.* for the purpose of building up part of the pleasure grounds near the Redoubt.

THE Bill to be submitted to Parliament next session by the Channel Tunnel Company seeks power for the construction of a submarine railway, which at Dover is to be connected with the systems of the South-Eastern and Chatham companies and on the French side of the Channel with the Northern of France and other lines. The tunnels will be lighted and worked by electricity, and land is to be acquired near the Kent shore in the Alkham Valley for the erection of a generating station, space being likewise reserved in the same neighbourhood for the deposit of the excavated chalk.

A LOCAL GOVERNMENT BOARD inquiry was held at the Bolton town hall by Mr. H. R. Hooper, M.A., M.Inst.C.E., into the Corporation's application to borrow 20,000*l.* for electric lighting and 3,373*l.* for works of paving. In the first three years there were the following losses on the electricity:—1895, 591*l.*; 1896, 1,054*l.*; and 1897, 269*l.* The next year saw a profit of 306*l.*, and last year this was 6,109*l.* The money was wanted for mains, house service and meters. The latter was subsequently withdrawn, and the town clerk said they would purchase them out of revenue. The net profit since 1898 on electricity was 32,209*l.*, and the amount paid in aid of rates was 29,582*l.*

NOTICE has been given to the Arbroath Town Council that it is the intention of Mr. George Balfour, electrical engineer, London, to apply immediately for a provisional order in connection with his proposal to introduce the electric light in the burgh. In March last the Town Council resolved to give their support to Mr. Balfour in obtaining such an order, on the basis of an agreement then entered into with him. The works will be erected on what is known as the Shambles site in Grimsby, and the Town Council will have the power to take over the works, if they choose, at mutual valuation as a going concern either at the end of thirty years from the term of Martinmas succeeding the date of the order or at the expiry of every period of five years thereafter.

## BUILDING AND BUILDERS.

THE American Smelting and Refining Company is erecting a model town near Trinidad, Colorado. All the buildings will be constructed entirely of concrete.

MR. WILLIAM STARK, of Fordmouth, Cobham Road, Westcliff-on-Sea, builder, who died on October 7, left estate of the gross value of 61,503*l.* 10*s.* 6*d.*, including personality of the net value of 43,718*l.* 13*s.* 7*d.*

THE East Ham Council has decided to make application for a provisional order to borrow 28,250*l.*, this being the excess money spent on the erection of municipal buildings in the borough and the cost of the proposed erection of new public health department offices.

MR. G. MACFARLANE, president of the National Federation of Building Trade Employers, and Mr. Dennis Haggerty, general secretary of the United Builders Labourers' Union, have been appointed by the Home Secretary to be additional members of the committee of inquiry into the dangers attendant on building operations.

THE Glasgow Corporation last week defeated a motion "That it be remitted to a special committee of the Corporation to consider and report on the expediency of instituting, in the public interest, where practicable, a works department of the Corporation, whose committee shall be charged with the duty of carrying out the work that at present is executed for the Corporation by private contractors."

THE Hampshire County Council have adopted the following recommendations of their education committee:—The raising of a loan of 5,700*l.* for the erection of a new infants' Council school at Eastleigh; the expenditure of 2,155*l.* for a new Council school at Lee-on-the-Solent; the borrowing

of 4,000*l.* for rebuilding Arlesford Grammar school; the raising of a loan of 600*l.* by Winchester for a head master's house at Peter Symond's school, Winchester.

THE Birmingham housing committee have decided to meet in future once in every fortnight, instead of monthly, as hitherto, in consequence of the increased work devolving upon the committee. A new sub-committee, whose duty it will be to interview owners whose property has come under official notice, was appointed. The hope is entertained that the new arrangement will facilitate the convenience of property owners, and will lead to a more equitable division of the detail work, much of which has hitherto been done by the chairman, among the members of the committee.

THE great Singer building now being built in Broadway, New York, which will rise forty-one storeys, or over 600 feet above the ground, is to have, according to the *Glasgow Herald*, a novel equipment in the shape of a huge wind anchor, by which it is claimed the skyscraper will be able to defy the severest storms. Rods 3½ inches in diameter will descend nearly 50 feet into a concrete foundation on solid rock 90 feet below the surface. They are bolted to a large anchor plate and above to a hollow column running to the top of the building. The device is attracting much attention among builders.

THE Oswestry Town Council have considered a long letter from the local branch of the Amalgamated Society of Painters and Decorators, in the course of which it was stated that the caretaker of the Corporation bath and gymnasium had been employed painting that building. They wished to protest against this, and point out how very unfair it was to properly qualified tradesmen of the town, several of whom were unemployed at the present time, if unskilled labourers were to be allowed to do skilled labour. It was contrary to the spirit of the "fair wage clause," of which members of the Council professed to be supporters. The communication was referred to the baths and gymnasium committee without comment.

IN consequence of the large number of students in attendance at the London County Council School of Building, extensions of the teaching staff are necessary. It is recommended that assistant teachers be employed at the London County Council School of Building in connection with the

classes in architectural drawing and design, builders' quantities, and painting and decorating in the session 1906-7, for one, one and two attendances a week respectively. In order to make the stone-carving and wood-carving classes more widely known, Professor Beresford Pite, F.R.I.B.A., the director of architectural studies at the school, proposes to give a course of six free lectures at the London County Council School of Building to students and their friends, which commenced on November 19.

A CONFERENCE between the representatives of the Aberdeen Master Plumbers' Association and the operative plumbers on strike took place last week in the town house, Aberdeen, with the view to coming to some settlement on the points in dispute. The conference lasted for between two and three hours, but no decision was arrived at, the operatives stating that they would require to place the modifications on the suspension clause before their union. The modified rule is, "That employes may leave or be dismissed on three hours' notice. Work may be stopped when weather circumstances are unsuitable for the class of work engaged in." Formerly the rule was that employes could be dismissed without notice, and that work could be suspended when weather or other circumstances were unsuitable, and that the employes should be paid for the time worked. It was subsequently announced that the men would accept the proposals of the employers.

THE manager of the Glasgow City Improvement Department (Mr. Menzies) has issued notes on the operations of the department. It states that the revenue for the year ended in May 1906 was 33,413*l.*, against 28,271*l.* for the previous year. The expenditure, too, had expanded, but through the increased revenue the committee had been able to carry on their operations without any increase of the rate, which is fixed for the second year at 3*d.* per *l.*, as compared with 1*d.* for the previous year. The number of houses erected by the department during the twelve months was 159, the total number erected now altogether being 2,124. Of these 570 are one-apartment houses and sixteen are houses of larger accommodation. Three tenements of dwelling-houses for the poorest classes at Winning Row, Parkhead, consisting of thirty-six two-apartment houses, are at present in course of erection or under consideration. The cost of these is estimated at 3,446*l.*

THE Durham County Council recently conducted an inquiry as to the housing conditions prevailing at Ushworth. The complaints as to overcrowding proved to be correct. The District Council were thereupon asked to put in force the Housing of the Working Classes Act and to provide satisfactory accommodation, but they refused. The health committee reported to the County Council that they had now got to the point that they should take into their own hands the power of the District Council under the Act. The cost would be borne by the District Council. The County Council would find the money in the first place, and then would apply to the District Council to levy a rate to repay it. They proposed to build about fifty houses at a cost of about 200*l.* each. The committee were empowered to employ architects, surveyors and such other assistance as might be necessary, and to enter into contracts for the purchase of sites and the erection of houses, subject to the approval of the Council.

THE Woking Urban District Council have received the sanction of the Local Government Board for by-laws intended to facilitate the erection of cheap cottages. The new building by-laws, which the District Council are about to adopt, will permit of the erection of one-storey or bungalow dwellings being constructed of timber, provided it is not placed within 10 feet of a street, but should the street be of a less width than 30 feet, the distance has to be increased to 15 feet. The building, if it does not exceed 8,000 cubic feet, must not be within 15 feet of adjoining lands or premises. Should the building exceed 8,000 cubic feet but not 12,000 cubic feet, the distance from adjoining premises has to be increased to 25 feet, and so on in proportion to the size of the building. The upper storey of two-storey buildings may be constructed of timber or other material, provided they do not exceed two in number, and are not placed within 15 feet of adjoining lands or premises. This distance is likewise increased in proportion to the size of the building, as is the case in the one-storey buildings.

THE Bath education committee have accepted the offer of the art master, who said that the students would be prepared to work out a decoration scheme for the walls of the life-room.

## VARIETIES.

THE Salford Guardians are going to purchase a site on the Crescent, with a view to the erection of union offices.

THE Chilian Chamber has approved the Bill providing for the reconstruction of Valparaiso, and authorising a loan of a million sterling for that purpose.

THE Poplar Guardians have decided to apply to the Local Government Board for the authorisation of a further loan of 27,000*l.* for expenses incurred in the erection of the new school premises at Hutton. The total cost is now estimated at 171,000*l.*

THE Bognor Urban Council are about to make application to the Local Government Board for sanction to borrow 950*l.* for the purpose of widening and improving the entrance to the pier, and a further sum of 865*l.* for the erection of an enlarged landing-stage at the head of the pier.

No fewer than three metropolitan theatres will be submitted for sale by auction at an early date, these being the Imperial at Westminster, built six years ago at great expense for Mrs. Langtry; the Greenwich theatre, and the Lyceum, with which Sir Henry Irving was so long associated.

THE Bank of England have purchased freehold land nearly three-quarters of an acre in extent at the corner of Content Street and Rodney Road, Walworth. Here the Governors propose at an early date to erect a building for the storage of papers and records.

A VISITOR to Hastings in the summer went on to the pier and leant over the railing. A freshly painted pipe, of which no warning was posted, left wide red marks on his coat. At the Hastings County Court his Honour Judge Scully awarded him 1*l.* damage and 1*s.* costs against the Pier Company.

THE Lancashire County Council road from Preston to Blackpool was opened on Monday. The road has decreased the distance between Preston and Blackpool to 17½ miles, and is the longest, largest and costliest work undertaken by the Lancashire main roads and bridges committee. The cost has been close upon 30,000*l.*

THE Harbour Commissioners of Quebec are agitating for extensions and improvements to the port in the way of new docks, wharf sheds and cargo-handling apparatus. The

plans for the proposed work have already been prepared, and show an immense and complete range of port equipments, which, it is estimated, will cost at least 5,000,000 dollars.

A SPECIAL meeting of the Warrington Town Council passed a resolution by a large majority deciding to settle the action brought against the Corporation by Colonel Edelsten, by carrying out the agreement made with him by the late mayor for the purchase of his mill for 8,000*l.* for street improvement purposes. The settlement was opposed by the non-traders.

THE higher education committee of the Cheshire County Council have offered the Corporation of Congleton 1,000*l.* towards the building and equipment of a technical institute for evening classes for Congleton and district. The Corporation have selected a site for the new buildings in Park Lane, and will find the balance of the cost out of an education rate of 1*d.* in the pound.

A SPECIAL committee of the Tarvin Rural District Council in Cheshire was recently appointed to consider what building by-laws, if any, were suitable for adoption. The majority concluded that the expense necessary for their enforcement would not be counterbalanced by the advantages. It has therefore been resolved to continue in their independence.

THE Hull City Council have adopted the report of the abattoir committee, according to which they had entered into contracts for the purchase of properties in the neighbourhood of Madley Street and Strickland Street for a site for an abattoir, and they asked for powers to deal with the three owners of property with whom negotiations had failed. The scheme is estimated to cost 50,000*l.*

DUNDEE gas committee recommend the Town Council to apply, in the provisional order, for powers which will enable the department to undertake the lighting of closes and common stairs. It is proposed that the work of lighting and extinguishing such lights should be undertaken by Corporation employes, and that the gas should be provided, in the first instance, at the cost of the rates.

THE application of the Littlehampton Urban Council for sanction to borrow 10,000*l.* for works of sewerage in the

parish of Wick, contiguous to Littlehampton, was the subject of an inquiry conducted at Littlehampton by Mr. E. S. Fawcett, M.I.C.E., an inspector of the Local Government Board. In the course of the proceedings a petition against the scheme signed by seven out of fifteen members of the Council was put in.

THE Dundee and Arbroath Joint Railway directors have resolved to apply at once for Parliamentary powers to construct a new railway station at Arbroath, and also for power to extend their lines at Dundee harbour. The directors have considered that it would not be judicious to include the Methil harbour scheme with the Arbroath station, as the former is likely to be rather controversial, while there is no likelihood of opposition to the Arbroath railway station.

THE Southport, Birkdale and West Lancashire Water Board have decided, with the sanction of the Skelmersdale Urban District Council, to apply to Parliament for power to purchase the Scarth Hill water undertaking, which at present supplies Skelmersdale. The price agreed upon by the two authorities to be paid for the pumping station and the mains connected therewith is 22,500*l.*; of that sum 17,000*l.* is to remain on mortgage with the Board at 3 per cent. for a term of thirty years.

At the Alexandra Dock extension works, Newport, the offices of the contractors (Messrs. Eaton Gibb & Son), together with the stores and workshops, have been removed to a site about 250 yards distant from their original position. This was rendered necessary by an alteration in the line of the south slope of the dock. Instead of adopting the usual plan of removing the corrugated iron structures piecemeal and re-erecting them, the contractors removed the entire buildings by lifting them bodily with cranes.

A CONFERENCE of authorities concerned in the protection of the Rottingdean road, near Brighton, from the inroads of the sea have adopted the scheme of the East Sussex county surveyor, who advised the construction of groynes between Roedean sewer ventilating shaft and Rottingdean, at a cost of 5,000*l.*, and the trimming of the cliffs at a further cost of 3,000*l.* Efforts are to be made to obtain an extension of time in order to allow of notice being lodged of the necessary Parliamentary Bill for the ensuing session.

THE first complete year's operations of the Birmingham Rowton Houses Company, Ltd., has resulted in a profit out of which the directors are able to declare a dividend. The accounts, after making ample provision for repairs and renewals, show a profit for the year of 2,091*l.* 5*s.* This, with the profit brought forward from the previous seven months' trading of 440*l.* 16*s.* 11*d.*, makes an available balance of 2,532*l.* 1*s.* 11*d.*, which the directors propose to appropriate as follows:—(a) To pay a dividend at the rate of 3 per cent., free of income-tax; (b) to place to reserve 500*l.*; (c) to carry forward to next year's account 572*l.* 2*s.* 11*d.*

THE improvement of the railway facilities at Scarborough has been definitely decided upon. The total estimated outlay is 34,000*l.* It is proposed to lay additional lines of metals as far as Seamer, to widen the Westbourne Grove ("Five Arches") bridge, and to erect an island platform a little distance to the west of the tunnel leading to the Scarborough and Whitby coast line. The estimated cost of these works is 22,000*l.* It is also proposed to spend 12,000*l.* or 15,000*l.* in making sidings beyond the present goods yard in what was formerly known as Gallows Close for the accommodation of empty excursion trains.

THE Brighton education committee have been informed that the plans for the enlargement of the Hanover Terrace schools did not comply with the borough by-laws in respect of air space, and also that the offices being in such close proximity to the school buildings are likely to be dangerous to the health of both scholars and teachers. In consequence it has been agreed that it be an instruction to the sites and works committee that the site of another cottage in Coleman Street be thrown into the playground of the girls' school, so that new offices could be placed 20 feet instead of 5 feet from the south end of the new covered playground.

At the town hall, Mansfield, Mr. R. H. Hooper, an inspector of the Local Government Board, held an inquiry into applications from the Town Council for sanction to loans—13,500*l.* for the gas undertaking and 8,000*l.* for the electricity works. The inspector pointed out that there was no need for the excess expenditure which had taken place, and he refused to allow a number of items in both applications. A number of items of small cost, under 10*s.*, included in the electricity committee's desired loan, he said,

# CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

ought certainly to be paid for out of revenue. If they charged every possible item of expenditure to capital account the undertaking could not succeed; it would become over-capitalised. He hoped that expenditures in excess of powers would stop.

THE Corporation of Dublin officially announce that they have applied to the Local Government Board for Ireland for their sanction to loans of 9,000*l.* and 134,842*l.* 8*s.* 6*d.* for the purposes respectively of completing the Bride's Alley area improvement scheme under the Housing of the Working Classes Acts, and providing an additional storage reservoir at Roundwood in connection with the water supply to the city. The balances of the outstanding loans contracted by the Corporation under the Sanitary Acts and the Public Health (Ireland) Act, 1878, exceed the assessable value for one year of the premises within the district in respect of which such moneys may be borrowed. The Local Government Board have directed their chief engineering inspector, Mr. P. C. Cowan, M.Inst.C.E., to hold a local inquiry in the matter at the city hall, Dublin, on December 6.

A BIG area of peat has been discovered on the upper part of the bank of Swansea's new reservoir at Cray. The works manager, in reporting the existence of a bed of about 12,000 cubic yards on the bank, a few feet above the present level of the water, advises its removal at a cost of 75*o*/. A smaller bed was discovered some weeks ago, and as a discolouration of the water was attributed to its presence it was removed. The Corporation engineer, however, denies that the first bed was removed because of the discolouration, although the fact of the discolouration is not denied, nor is the further fact that the discolouration has since the removal disappeared. That bed, he said, was removed for soiling purposes at a cost of 50*o*/. The new peat bed is not a bit injurious, he says, and if the Corporation follow his advice they will leave it alone. At Edinburgh waterworks a peat bed 450 acres in extent was discovered, but it was not thought worth while to remove it. The recent discovery at Cray is above the present water level, underneath the grass, and about a yard deep.

THE difficulty working people have of securing a house in Burnley was shown at the Burnley County Court, when six tenants of cottages were sued for arrears of rent, and

ejection orders were applied for. Owing to the prosperous state of the cotton trade operatives' cottages are in great demand, and in almost every case the defendants complained that they could not get another house. Judge Bompas said:—"I cannot help that, I am afraid. You cannot stop in this house if it does not belong to you, and you have had proper notice. I am afraid you will have to go out, and if you cannot go anywhere else you will have to go to the workhouse. In England we have built these workhouses in order that no one may be able to say they have nowhere to sleep. It is no disgrace to go into the workhouse if the reason is that there is no other place to go to. It is a disgrace only when you go there and you could be doing your work." Later the Judge said, "It is very sad there should be any want of premises, and someone ought to try and get premises for these people, but I do not know whose business it is." Ejection orders were made in all cases.

### THE PLUMBERS' COMPANY.

THE Lord Mayor was the chief guest at the annual meeting of the Plumbers' Company held at the Haberdashers' Hall. Among the guests were the Right Hon. Sir Horace Plunkett, K.C.V.O., F.R.S., Sir Hugh Owen, G.C.B., Sir Douglas Powell, K.C.V.O., Sir Shirley Murphy, Sir Fredk. Pollock, Bart., K.C.V.O., Sir Alfred de Brock Porter, K.C.B., Sir Martin Conway, M.A., F.S.A., Mr. Alpheus Morton, M.P., Mr. R. L. Morant, C.B., Sir Samuel Provis, K.C.B., and a number of metropolitan and provincial mayors and presidents of architectural and engineering, educational and other bodies, as well as the presidents of the Associations of Master and Operative Plumbers.

The Master of the Plumbers' Company, replying to the toast of the Worshipful Company of Plumbers, referred specially to the ever extending work of the Plumbers' Company, whose operations had extended to far cities of the Empire. Important changes had been introduced during the past year in consolidating and making more efficient the Company's system of education and registration. Nearly 2,000 new men had been admitted to the class examinations and the register. He, however, warned all whom it concerned against setting aside the teaching

of use and experience. The word "change" did not always spell "reform." He referred to the great traditional craftsmanship of the past which had resulted from a proper system of apprenticeship, and strongly advocated its revival. The Plumbers' Company aimed at union between all the forces which made for the same end, the safeguarding and improvement of the national health. They brought together health and water authorities, the professional classes and the plumber, and instituted a working arrangement which only needed legislative sanction to make it a complete protection to the genuine craftsman and the citizen.

He referred especially to the important labours of the joint committee on water regulations, which had been engaged in codifying water by-laws and standardising fittings, and whose important conclusions were only awaiting adoption by the Local Government Board. The Company took also a great interest in the industrial education committee of the conference sitting under Lord Selby's presidency, and from whose labours they looked for important results. The question of the training in craftsmanship of the artisan was the most serious and far-reaching which faced the country at the present moment. The Plumbers' Company believed in a system of apprenticeship adapted to modern needs, and the Operative Plumbers' Association was at one with them. He advocated an allied effort on the part of the National Union of Teachers, educational authorities and the workmen's unions to solve this question.

The Company set craftsmanship and citizenship, both dependent upon training, in the forefront, and he made an earnest appeal to the trades unions to set up a high standard of craftsmanship as their chief aim. If they did so, all the rest they stood for would follow, and the mists and misunderstandings which surrounded trades unionism would be dispelled.

#### ENGINEERING FELLOWSHIP.

THE second award of the Vulcan Fellowship (founded by the Vulcan Boiler and General Insurance Company) will be made this session of Manchester University. Applications should be made to the Registrar on or before December 10.

The Fellowship is of the annual value of 120*l.*, and will

be awarded by the Senate. The object of the Fellowship is the encouragement of advanced study and research in mechanical and electrical engineering, and every Fellow shall be required to devote the whole of the time during which he continues to hold the Fellowship to the pursuit under the direction of the Professor of Engineering of such study or research in the University, or, if a graduate in the University of Manchester, either in the University or other place sanctioned by the Senate.

The Fellowship is open to graduates of the University of Manchester, or of other universities who can furnish satisfactory evidence of being able to pursue original research. Election is in the first instance made for one year, but the Fellowship may, at the discretion of the Senate, be renewed for a second year if on the report of the Professor of Engineering its holder has made satisfactory progress with his research. If for special reasons it is thought desirable, the Senate may renew the Fellowship for a third year on the report of the Professor of Engineering that it is desirable to do so.

Fellows are required at the end of their tenure to present a report of the work done by them, such report to be laid before the Senate and Council, and to be submitted to the donors of the Fellowship. No award will be made in the absence of a suitable candidate, but if no award is made in any year the amount of the Fellowship may be applied, at the discretion of the Council, for an additional Fellowship in another year. The Fellow may, with the approval of the Senate, give an occasional course of lectures or demonstrations, or assist occasionally in the teaching of the University, but he may not hold any salaried office therein.

#### LONDON COUNTY COUNCIL HOUSING, 1905.

A RETURN by the housing of the working classes committee of the London County Council shows that during the year 1905 there were provided in houses of the working class in London 26,076 new rooms, and in certain suburban districts described as "extra-London" 36,874 new rooms, making a total of 62,950. The total number of rooms demolished was 12,013, of which 8,708 were in the central area. The net addition was therefore 50,937.

SANITARY PIPES.

The net addition to the number of rooms in the whole area was 53,499, 59,009 and 51,566 in the years 1902, 1903 and 1904 respectively. In the county of London the net addition was considerably less than in previous years owing to the unusually large number of houses demolished, the greater part of the new accommodation to replace this loss, so far as it has resulted from the exercise of statutory powers, having already been provided in previous years. It is worthy of note that of the 36,874 rooms added in the extra-London area, no fewer than 15,006 are situated in the eastern section, comprising East Ham, Leyton, Walthamstow, Wanstead and West Ham.

The extent to which the new accommodation for the working classes has sufficed to meet the increase in the working-class population is a matter which cannot be ascertained with any great degree of accuracy. Upon consideration of the number of persons occupying the Council's dwellings it is found that an average of one and a half persons per room is a reasonable figure to take for accommodation provided within the county area, and an average of one and a quarter persons per room may be taken as a general basis in the extra-London area. If this basis be adopted it may be stated that in the whole area accommodation for 67,248 persons has been added in the course of the year, as compared with 71,317, 79,130 and 69,212 in 1902, 1903 and 1904 respectively. If the population increased in the same ratio as in the decennium 1891-1901, the increase would be 100,852 persons of all classes, although it is believed that an estimate on this basis shows a larger increase than has actually taken place. On the assumption that the increase in the working-class population amounted to two-thirds of the total, such increase would be 67,235 persons on the basis of the decennial period for the whole area, or 60,109 persons on the basis of the last quinquennial period for London and the decennial period for extra-London, whereas accommodation for 67,248 persons has been provided.

With few exceptions there has been very little variation in the rents from year to year, but the figures in the return give some indication of a tendency in the rents in the central area to decrease, and in the rest of London and the extra-London districts to increase.

## CONSTRUCTION OF EDINBURGH TRAMWAYS

JUDGMENT was given in an action before Lord Salvesen by Dick, Kerr & Company, Ltd., Abchurch Yard, Cannon Street, London, against the Corporation of Edinburgh, for declarator that the defenders were bound to join with them in submitting a claim of 1,351*l.* 12*s.* 4*d.* to the final sentence and decree arbitral of the President for the time being of the Institution of Civil Engineers. The sum named was the price of material supplied for the construction of the cable tramways. The pursuers contended that the claim being for tramway works should be sent to arbitration. The defenders stated that the contract was at an end, and that there was nothing to send to arbitration, the claim having been finally discharged.

Lord Salvesen repelled these defences, granted declarator as craved, and sisted the action to wait the result of the arbitration, and found the Corporation liable in expenses. According to the *Scotsman*, his Lordship said it was an unusual form of action, but it was explained to him that the pursuers had been unable to approach the arbiter with a view to asking him to take up the reference, as the principal contract containing the arbitration clause founded on was in the hands of the defenders, who refused to give it up. No objection was taken to the competency of the action by the defenders. The pursuers executed the work of constructing the cable tramways in certain of the streets of Edinburgh under a series of contracts. These contracts contained two arbitration clauses. They were both of a very wide character, and it was difficult to see how the clause of reference contained in clause 4 of the general conditions could be enlarged. The defenders, nevertheless, pleaded that the claim which the pursuers desired to have referred did not fall within the reference. The claim itself was for the price of certain materials which the pursuers ordered in connection with their contracts for structural work, and which, owing to alterations on the original plans or otherwise, had been left over as being in excess of the amount actually required, and were now said to be of no value except for scrap. That claim might or might not be well founded, but with the merits of the claim he had nothing to do if the parties had contracted that that should be decided by an arbiter. In his Lordship's opinion

the claim was clearly a "charge or account connected with the contract," and as every difference relating to such, whether arising during the progress of the contract or after its completion was referred, it could not be said that the reference was merely executorial of the contract. The defenders, however, contended that all claims of that nature were made the subject of special reference to the Corporation engineers in terms of the first head of the general conditions of the contract, which provides *inter alia* that they "may make such feasible alterations in the works during its progress as they may deem necessary," and in all cases where "such alterations affect the cost of the work the Corporation engineer shall determine whether they add to or reduce the cost, as well as the amount which shall on that account be added to or deducted from the contract price." They argued that on the face of it the claim was one which arose from an alteration of the contract, and that the Corporation engineers were supreme as to the amount which should on that account be added to the contractor's claim. His Lordship expressed no opinion as to whether that clause might be founded on as a defence on the merits, but it certainly was not, in his opinion, a clause of reference. One of the things which the parties expressly referred under one of the arbitration clauses proper was making claim for extra work, but such a reference would be meaningless if that fell to be finally decided by the Corporation engineers. He would say no more on the construction of article 1 itself, because that, too, was a matter that fell within the reference. The defenders further pleaded that the pursuers' claim was barred by its having been discharged on May 29, 1903. The averments on which that defence rested involved questions of fact about which the parties were entirely at variance. If the defendants had produced a tested discharge of the very claim sued on, he supposed the Court would have been entitled to proceed on such a discharge and not have passed on a discharged claim to the arbiter for his decision. But that was very far from being the state of matters, as it was plain the alleged discharge (assuming it was relevantly averred) could not be instructed without an allowance of proof. Mr. Cooper accordingly boldly asked for a proof of his averments, on the ground that the question of whether the claim had been discharged was not one which was remitted to the arbiter. He was unable to cite any

authority in support of that demand, and his Lordship saw no principle which compelled him to follow so unusual a course. A defence to the effect that a claim which was sued for was in whole or in part discharged appeared to him to be a defence on the merits, and was therefore one which fell within the jurisdiction of the arbiter. To hold otherwise would involve extraordinary consequences. According to the defenders' contention, the Court would have to ascertain by inquiry whether the claim had been discharged, an inquiry which might in many cases involve a consideration of the nature of the claim itself, while the arbiter might hold in the end that no claim existed which required to be discharged. Conversely if the claim were referred, the arbiter on the same reasoning could not consider as part of the defence that it had been expressly or implicitly discharged in whole or in part; but would have to give his decision on the merits of the claim without reference to the question whether it still subsisted. The sound view appeared to his Lordship to be that the parties had simply substituted for the Court a private tribunal of their own which was to settle the enumerated disputes exactly as the Court would have settled them but for the clause of reference. He accordingly proposed to repel the first, third and fourth pleas in law for the defenders. It followed that the pursuers were entitled to decree in terms of the leading conclusions of the action. *Quoad ultra* he would sist the cause to await the decision of the arbiter; so that if the pursuers were successful before him, they might be enabled to enforce payment of any sum awarded by means of the present action.

#### THE INSTITUTION OF CIVIL ENGINEERS.

At the ordinary meeting on Tuesday, November 13, Sir Alexander Kennedy, LL.D., F.R.S., president, in the chair, the paper read was "Single-Phase Electric Traction," by C. F. Jenkin, B.A., Assoc.M.Inst.C.E. The following is an abstract of the paper:—

A paper on "Electric Traction on Railways," by Messrs. Mordey and Jenkin, was read before the Institution in 1902. The object of the present paper is first to bring the previous account of the different systems up to date, and to show

how far the conclusions then arrived at have to be modified in the light of recent experience; and then to describe the equipment required for single-phase working and to discuss the different problems which arise in connection with it.

Little advance has been made in continuous current working. The voltages have risen a little and a few cases are mentioned where pressures of 1,000 and 3,000 volts are in use. The principal advances in three-phase working have been the completion of the Zossen experiments, the opening of the Valtellina line, and the adoption of three-phase working for the Simplon Tunnel. The importance of the experience gained on these lines is pointed out.

A list is given of a number of single-phase lines now running and under construction. The history of the introduction of the single-phase motors which have made this advance possible is briefly related. It is shown that experience has confirmed Messrs. Mordey and Jenkin's conclusion that the single-phase is the only system which can satisfy all the requirements of a general system. A general explanation is given of single-phase traction motors, and the two types now most in use are described—the compensated series and compensated repulsion motors. Their relative merits and the methods of control are discussed, and particulars are given of the contractors and the magnets which operate them. A table is given showing the limits of voltage at which flickering is visible with glow-lamps on a low-periodicity supply.

The permanent-way equipment is then described, a method of calculation being given for finding the drop of voltage in any parts of the circuit. Illustrations taken from numerous tests made on an actual railway are given, confirming the theoretical calculations.

The advantages of high pressure and low periodicity are dwelt on, methods for reducing the drop in the rails are described, and the hope is expressed that large drops will be allowed. Electrolysis, danger from shocks, and interference with telegraph and telephone-lines are discussed, with examples of methods which have been successfully used for avoiding them. Automatic signalling is shown to be possible without a fourth rail. The mechanical design of the overhead construction is dealt with, four main types being described. The advantages of the newer methods for overcoming the effects of temperature, wind, &c., are pointed

out. Suitable insulators and safety-devices, also special work through bridges, &c., are illustrated. Collector-bows are discussed and the various designs are described, their suitability for high speeds being the most important point. The difficulties of design of single-phase generators are briefly mentioned, and the possibility of using two-phase and three-phase generators is discussed, with examples.

### THE BULFORD HUT BARRACKS.

THE committee of public accounts in their report to Parliament, comment on the fact that in the Southern District, at Bulford, the Army Council carried out certain considerable works without offering the contracts for competition and without consulting the Treasury upon this unusual procedure. This occurred in the erection of certain hut barracks, and in the case of some accommodation for the mounted infantry.

In the case of the huts, the General Officer Commanding placed before the Army Council the following reasons for the adoption of the course proposed:—"The reasons are that we have an existing contract with Messrs. Playfair & Toole; that this is coming to an end, and they therefore have staff and plant they can at once turn to account; that we can give them an order under this contract without the delay of printing fresh bills of quantities, specifications, &c., and issuing forms of tender to all the firms on the approved list; that we can give the orders piecemeal as we settle the details for each class of hut. . . ." As the addition to the contract already given was only about 11 per cent. your committee, if Treasury consent had been obtained, might have allowed this matter to pass. The case of the mounted infantry buildings is more serious; the original contract was for 28,150*l.* and the new contract was for 42,000*l.* The reasons advanced by the General, which had weight before, cannot be considered adequate when the new work, instead of being an addition of 11 per cent. to the original contract, is no less than 150 per cent. Here a contractor, by taking a small contract, gets upon the ground, and then, to the exclusion of every other firm, he tenders first for a smaller work and then for a much larger one. These contracts

# THE "DRAWWELL" GRATE

WAS PLACED

## First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

**N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.**

where the "Drawwell" can be seen in action.

were authorised by the Secretary of State, who considered that the urgent needs of the service outweighed the admitted financial objection. Your committee cannot accept this view, and must record their opinion that if the need was very urgent it could have been so strongly placed before the Treasury that the approval of that Department could have been secured. It is possible that this was a service which would have been unduly delayed had it waited for the direct sanction of Parliament by inclusion in the schedule of the Military Works Loans Bill for the ensuing year, but Parliament having provided this special machinery of Treasury sanction to meet such cases of urgency, any departure from the authorised practice is open to the severest criticism.

#### A BURGH ENGINEER'S CLAIM.

THE record has been closed in the Court of Session, according to the *Dundee Advertiser*, in the action raised before Lord Ardwall at the instance of Mr. William Mackison, civil engineer and architect, Dundee, against the Lord Provost, Magistrates and Councillors of the burgh of Dundee. The purpose of the action is to recover 49,601*l.*, restricted to 15,000*l.*, for extra work which the pursuer alleges he performed during his term of office, which began in 1868. The pursuer's statement was published on September 21.

The defenders plead, among other pleas, that the pursuer's averments are irrelevant and insufficient, or, at all events, are too vague and wanting in specification to be remitted to probation. They also plead that the pursuer is barred by delay and acquiescence, and that the sums claimed have prescribed and can be proved only by his writ or oath; further, that the work in respect of which the pursuer sues was included within the duties of his office as burgh engineer, and is covered by the salary duly paid to him as such. It is denied that the pursuer was employed by the defenders to perform work outwith his duties as surveyor of police. It is admitted that during his tenure of office as surveyor of police he performed, as it was his duty to do, the engineering work necessary in connection with the preparation and execution of various local Parliamentary measures and of various public construction works. Some

of the work authorised during his tenure of office is at present being carried on as part of the ordinary work of the burgh engineer's department. The preparation and revision of clauses in Bills formed no part of the pursuer's duties, being undertaken in the office of the town clerk, and the pursuer was consulted only with regard thereto in so far as engineering matters within his province were concerned. The defenders deny that the pursuer was employed by the defenders and their predecessors with regard to the Bills and Acts enumerated and the various public works carried out by them during the pursuer's tenure of office, on the footing that he was to be paid for such work over and above his official salary, or that any such agreement was ever entered into. All work of the kind referred to performed by pursuer during his tenure of office was within the ordinary scope of his duties as surveyor of police, and was so regarded by him and them all along. Further, it was the regular practice of the pursuer to render to the treasurer in connection with each work, for inclusion in the expenses thereof, an account of the proportion of the salaries of himself and his staff which he deemed applicable thereto, and he at no time suggested that he reserved further claims to remuneration as against any of these undertakings. It was essential that the defenders should be informed of the total outlay, including engineer's charges, involved in each of their public undertakings in order that their borrowing powers and assessments might be adjusted accordingly, and the defenders relied on the accounts rendered by pursuer as disclosing all charges of an engineering character effeiring to each undertaking. The defenders gave detailed replies and explanations as to the specific items mentioned by the pursuer. They deny that they have ever recognised or admitted liability to pay the pursuer any sum over and above his official salary in respect of the work specified, and that he ever formulated his claims or pressed for a settlement until shortly before the raising of this action. They say that by the tramway minute of October 18, 1900, they directed that the work in question should be carried out in the pursuer's department as part of the ordinary work thereof and in conformity with the defenders' practice in similar cases.

The case was sent to the procedure roll.

# The DEVON FIRE

Reg. No. 487790.

## FIRST PLACE in TESTS

### The DEVON FIRE.

"Report in 'Lancet,'  
May 19, 1906:—

"As a final result of the whole of the tests, the examiners find that of the grates submitted, those of Messrs. Candy & Co. and two other firms are the best, showing practically equal results.

"The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained: the fires were bright and clear."  
N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

HIGHEST AWARD and MEDAL at the 1906 (Bristol) EXHIBITION of the ROYAL SANITARY EXHIBITION.

### IMPORTANT TESTS OF OPEN DOMESTIC GRATES

Carried out officially by the Smoke Abatement Society in conjunction with H.M. Office of Works at the New Government Buildings, Parliament Street, London.

#### 1.—Coal Consumption during 32 hours.

Thirty-six Competing Grates.

..... 27'92 lbs.

The "DEVON" Fire.

..... 20'45 lbs.

Saving 7'49 lbs., or more than 25%.

#### 2.—Heat.

Thirty-six Competing Grates.

7'13° F.

The "DEVON" Fire

7'4° F.

Increase 27° F., or nearly 4%.

#### 3.—Smoke Produced.

Thirty-six Competing Grates.

1'09

The "DEVON" Fire.

'79

Saving more than 25%.

### The DEVON FIRE

is made in sizes and designs to suit any room, and can easily be fixed to existing mantels.

The saving in coal will be found to quickly repay the cost of installation, to say nothing of increased comfort, better ventilation, and reduction in servants' work.

Supplied in a charming variety of the most artistic colours, in tiles, bricks, or briquettes, and faience or antique glazed blocks.

Price from £2 upwards.

Send for Illustrated Price Lists and full copy of Report of Tests.

Made solely by **W. NEWMAN & SONS,**

DOOR SPRING MAKERS, **HOSPITAL ST., BIRMINGHAM.**

ESTABLISHED OVER 100 YEARS.

## The ARCHITECT and CONTRACT REPORTER.

*New Year's Special Issue.*

*77th Volume.*

6 to 11 IMPERIAL BUILDINGS,

LUDGATE CIRCUS, LONDON, E.C.

December 1906.

Dear Sir,—On Friday, January 4th next, TWENTY THOUSAND (20,000) COPIES of "**THE ARCHITECT AND CONTRACT REPORTER**" will be sent to ARCHITECTS, BUILDERS, and CONTRACTORS throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"**THE ARCHITECT**" is, in its Advertisement Columns, the *most reliable* reference for all who are engaged in Building Operations, and is acknowledged to be *the best medium for Advertisers*. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than *one-fourth the cost* of sending 20,000 Circulars by post, and it is well known that Circulars are frequently thrown into the waste basket unread. Our *New Year's Double Number* always contains beautiful illustrations and valuable letterpress, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that if you wish to secure space for an Advertisement, we shall be much obliged if you will *communicate with us* without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir, yours faithfully,

GILBERT WOOD & CO., LIMITED.

No. 549.—5 ft. 6 in. Inlaid Mahogany Bedroom Suite, Sheraton Design, £10 10s. "QUARTERING, LONDON."

# THE Architect and Contract Reporter.

FRIDAY, NOVEMBER 30, 1906.

Published weekly, subscription 19s. per annum for Great Britain, and for Colonial and Foreign subscriptions £1 6s. 6d. All business communications to the Managing Director,

P. A. GILBERT WOOD,

Publishing Offices, 6-11 Imperial Buildings, Ludgate Circus, London, England.

\*\* Entered in the United States of America as second-class matter: Agents for America, The International News Co., 5 Bream's Buildings, Chancery Lane, London, England, and New York.

As Westminster has become one of the most important centres of the professions of Architecture and Civil Engineering, arrangements have been made by Messrs. GILBERT WOOD & CO., Ltd., to establish Branch Offices in that district at 43 OLD QUEEN STREET, S.W., Messrs. W. HAY FIELDING & CO. becoming the representatives for all business purposes.

The Birmingham Offices are at 102 COLMORE ROW.  
E. D. AINSWORTH, Manager.

## AGENTS FOR THE COLONIES.

MESSRS. GORDON & GOTCH,

Melbourne, Sydney, Brisbane, and Perth, Australia; Wellington, Christchurch, and Auckland, New Zealand; Launceston and Hobart, Tasmania.

SOUTH AFRICA—Central News Agency, Ltd.

Telephone No. 4725 Holborn.

## NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

## EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

## TENDERS, ETC.

\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

## COMPETITIONS OPEN.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75/., 50/., and 25/., will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50/., and 25/., Deposit 2/., 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

GRIMSBY.—For the erection of a Congregational church, school and manse at an estimated cost of 8,200/., Premiums 25, 15 and 10 guineas. Sir W. Alfred Gilder, F.R.I.B.A., assessor, Hull. Deposit 2/., 2s. Further particulars, Mr. E. L. Bridge, Fish Docks, Grimsby.

IRELAND.—Dec. 31.—The Local Government Board for Ireland invite from architects the submission of designs for labourers' cottages in rural districts. Premiums of 50/., 30/., and 20/., for the three best designs. A copy of the conditions of the competition may be obtained from the Secretary of the Local Government Board, Dublin.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212/., each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100/., 50/., and 25/., are offered. Deposit 1/., 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

WOLVERHAMPTON.—Dec. 31.—The Board of Management of the Wolverhampton and Staffordshire general hospital, Wolverhampton, invite competitive designs for a nurses' home adjoining the hospital. Mr. J. Stephen Neil, house governor and secretary.

# MARPEDO WHITE JAPAN

## SLOW DRYING.

Suitable for either exterior or interior High-Class Decorative Work, invaluable to Architects, Decorators, Ship and Yacht Builders, Railway Companies, &c. It is easy to manipulate, and large areas can be covered evenly. When dry it presents a hard, brilliant and durable surface, which will not crack. On properly prepared surface one gallon of MARPEDO SLOW-DRYING WHITE JAPAN will cover about 80 square yards. It dries in about 12 hours.

## TRADE NOTES.

MESSRS. McDOWALL STEVEN & Co., LTD., engineers, London,  
are the contractors for the kitchen equipment of the new  
Cotton Exchange, Liverpool.THE Seaburn Small-pox Hospital, Blaydon-on-Tyne, is  
being warmed and ventilated by Shorland's patent Man-  
chester stoves and special inlet ventilators supplied by  
Messrs. E. H. Shorland & Brother, of Manchester.WE have received from Messrs. Vickers & Field, Ltd.,  
a circular relating to their patent Wirebitu, which is made  
of pure Trinidad bitumen spread on woven steel wire, thus  
forming a perfect damp-course sheeting. It is made in  
lengths and widths for purposes of lining reservoirs, tanks,  
vaults, &c.THE Patent Indented Steel Bar Company's system of  
steel reinforcement is being used for the floors of the  
Waldorf Hotel in the Strand, and also for the foundations  
and the floors of the printing machinery department of the  
new *Morning Post* buildings. Amongst other important  
contracts this company is supplying the steel reinforcement  
for the new dock works now in course of construction in  
Scotland by the Coventry Ordnance Company.OUR readers will be interested in inspecting the premises  
known as St. Paul's Chambers, 19-23 Ludgate Hill, the  
restoration of which has just been completed by Farnham,  
Ltd., under Messrs. Joseph & Smithem, architects, 83 Queen  
Street, Cheapside. The façade is of Tisbury (Wilts) stone,  
which, although treated at various times with so-called  
stone-preserving fluids, had been seriously disintegrated by  
the London climate. The decayed stonework has been  
replaced by Portland stone, the whole frontage has been  
waterproofed by the Farnham wax process and subsequently  
cleaned by sand blast, so that it is now impervious to the  
influence of the London atmosphere.MESSRS. PATMAN & FOTHERINGHAM, LTD., of 100 and 102  
Theobald's Road, London, have secured the contract for  
building a motor garage at Lothian Road, Camberwell, S.E.,  
for the Gearless Motor Omnibus Co., Ltd., of 17 Waterloo  
Place, Pall Mall, S.W.

**BUILDING AND BUILDERS.**

THE Glasgow Corporation have adopted the following resolution:—"That Clause XXIX. of the Standing Orders be altered so as to read as follows:—"Only firms paying the standard rate of wages or piece prices for all classes of work and recognising trades union conditions, whether under contract or otherwise, shall be eligible to estimate for and receive Corporation contracts. All Corporation contracts shall contain a clause requiring the contractor to pay not less than the standard rate of wages or piece prices in each branch of the trade, or, where no such standard rate of piece prices exist, such wages or piece prices as are generally recognised as fair in the trade; and in districts or places where the Glasgow scale of wages or piece prices do not apply, to pay to the said workpeople not less than the standard rate of wages or piece prices paid in such districts or places, or, where no such standard rate or piece prices exist, such wages or piece prices as are generally recognised as fair in the trade in such districts or places."

IN the Court of Appeal the Master of the Rolls and Lords Justices Romer and Mathew recently had before them the case of *Brindle v. Jones*. The defendant, a builder, appealed against an award of the judge of the Chorley County Court under the Workmen's Compensation Act, 1897. The defendant had contracted to repair a building, and after three men had been at work for an hour whitewashing an outside wall, each standing on a ladder, the ladder on which one of them, named John Brindle, was standing gave way and he was killed. The dependents of the workman accordingly claimed compensation. In the County Court the question to be determined was whether Brindle at the time of the accident was engaged upon a building which was being repaired by means of scaffolding within the meaning of the statute. The County Court Judge held that the ladders which the workmen were using at the time did not in themselves constitute scaffolding, but he found that scaffolding was being used, inasmuch as a board had been placed between a stepladder and a wall for the purposes of whitewashing at another part of the building. He therefore awarded compensation amounting in all to 234/. It was pointed out that up to the time of the accident the board and stepladder

had not been used. Without calling upon the respondent's counsel, the Master of the Rolls gave judgment. He said there was ample evidence to justify the County Court judge's conclusion. The fact that the injured workman was in no way concerned with the scaffolding, or that the scaffolding was entirely remote from the part of the building on which he was engaged, did not affect his right of action under the Act. When once it was ascertained that scaffolding was being used the right of the workman came in. Lords Justices Romer and Mathew concurred, and the appeal was dismissed with costs.

**ELECTRIC NOTES.**

THE municipal authorities of Vilna have provisionally accepted the proposal of an American company who offered to pay 7,630,000 roubles for a seventy-five years' concession for the electric tramways in the city.

THE first electrical power derived from Niagara Falls for the use of Toronto was turned on on the 19th inst., and will be used for lighting and power purposes of all kinds. The present amount available is equal to that of 40,000 horse-power.

Two members of the Walton and Felixstowe Council, Messrs. D. J. Cowles and T. Ward, have been surcharged by the district auditor, Mr. Dixon, the sum of 3,000/ which was paid on their authority to the Suffolk Electricity Supply Company, on the ground that the money was applied to a purpose other than that which was sanctioned by the Local Government Board.

AT Sunderland a Local Government Board inquiry was held on Tuesday into the Corporation's application for sanction to borrow 23,000/ for electric lighting purposes. Mr. Snell, the borough electrical engineer, said that during the year ended March last 6,159,000 units of electric power were sold, and it was expected that during the current year the sales would reach nearly eight million units. A fifteen years' agreement had been entered into with Messrs. Doxford & Sons, shipbuilders, for a supply of 2½ million units annually, and that would make the output over ten million units a year. There was no opposition.

At a meeting on Monday of the tramways and electricity committee of the Belfast Corporation it was stated that the increase in the demand for electrical energy during the past few years has been very considerable, and that it would be absolutely necessary to provide more plant for the purpose of carrying out extensions. The estimated cost of the work is 75,000*l.*, and it was agreed to take the necessary steps to obtain the approval of the Local Government Board for the loan and to advertise for tenders.

THE Western Counties Electric Railways and Tramways Company, Ltd., have announced that they intend to make application to Parliament in the coming session for leave to bring in a Bill under the name of the York and District Tramways Bill to give them power to construct tramways in the city of York, in the parishes of Huntington, Fulford, Dringhouses and Acomb. It is believed that the G. B. Surface Contact Company are backing up the application, and that it is their intention, or the intention of a syndicate, to promote the Bill in order to incorporate a company and authorise that company to lay down new tramways in the city.

THE Wood Green District Council some months ago made application for sanction to borrow between 40,000*l.* and 50,000*l.* for the purpose of generating and distributing electricity. This, however, was refused by the Local Government Board. After the inquiry the District Council had the locality canvassed as to how many tradespeople would be willing to use the light. The cost of this canvass was objected to at the audit. Mr. Young, the official auditor from the Local Government Board, stated that he knew of no authority for such payment, which seemed to him to be illegal. He should report to the Board on the subject, and probably the cost of the canvass would be disallowed and surcharged.

THE Local Government Board recently refused to sanction a loan for the purchase of a site for a town hall at Hornsey, a scheme which its opponents said would ultimately involve a cost of 200,000*l.*, though the Borough Council denied this. It has now been decided by the Council not to proceed further with the matter.

## VARIETIES.

THE Portland stone employed for the erection of the Manchester Infirmary is derived from the quarries of the Bath Stone Firms, Ltd.

THE Sunderland Rural District Council have adopted a scheme providing for the erection of 121 dwellings for miners, which will cost about 22,000*l.*

At the last meeting of the Essex education committee the offer of Sir Henry Mildmay to sell 1½ acres of land for a new school at Springfield was accepted. The price paid was 500*l.* The frontage to the main road is about 200 feet.

MESSRS. MURGATROYD & SONS, LTD., have secured the contract for the new station at Morecambe for the Midland Railway Company. An effort will be made to have the new station ready for next Whitsuntide.

THE Lincoln City Council, in committee, have decided upon a waterworks scheme, which includes the building of a new covered reservoir on Cross o' Cliff Hill, with a capacity of 6,000,000 gallons, and the construction of a water tower in Westgate. It is estimated that the scheme will cost something like 50,000*l.*

ARBITRATION proceedings between the Guildford Corporation and the Woking Water Company, with regard to the price to be paid by the Corporation for that part of the company's undertakings in the borough of Guildford, are expected to commence on December 19. The company ask for over 105,000*l.*, and the Corporation have offered 18,700*l.*

THE London County Council has informed the Hampstead Borough Council, with regard to a proposed widening of Heath Street, estimated to cost 100,000*l.*, that in view of the present and prospective heavy financial commitments of the County Council, the improvements committee would not be prepared to advise that Council either to undertake the improvement or to contribute any part of the cost of it.

At a meeting of the Kirkham and Mesham Room and Power Company, nineteen tenders were considered for the erection of the new mill, and that of Mr. J. Boland, of Blackburn, was accepted. The mill is to cost 16,000*l.*, and will have room for 1,050 looms. It is expected to be ready

# Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

*and*

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does not require expensive pressure-plant; does not reduce the mechanical efficiency of the timber; does not increase the liability of the wood to inflame; does not render the wood poisonous to human beings or domestic animals; and does not leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW,  
and 6 Crosby Square, LONDON.

for work in about four months, providing the weather is favourable.

H.M. CONSUL at Palermo (Mr. S. J. A. Churchill has forwarded an extract from the *Ora* (Palermo) respecting a project under consideration for the establishment of an industrial quarter in that city. New industries initiated in this quarter will enjoy exemption from municipal dues, and it is further proposed to award a substantial premium to any new industry employing a minimum of 500 hands.

THE Board of Trade has approved of the scheme of the Bournemouth Town Council for constructing an experimental portion of an undercliff drive eastward of the Bournemouth pier, for which a tender amounting to nearly 17,000*l.* has been provisionally accepted. The proposal to build an undercliff drive at Bournemouth has always been strenuously opposed by a section of ratepayers, and has been before the town for nearly a quarter of a century.

THE Great Central Railway Company, who have large works in Openshaw and Gorton, have notified the Gorton education committee that instructions have been given for their apprentices to be relieved from overtime, in order that they may be at liberty to attend the evening classes. This is the outcome of the committee's efforts to get the co-operation of employers in furthering their education scheme.

THE Duke of Fife has presented to the towns of Banff and Macduff as a free gift the mansion of Duff House, and that portion of the park immediately surrounding it, covering an area of about 140 acres. This would include the gardens, stables, two lodges and the rod fishing along the land comprised in the gift. This gift is offered with absolutely no restrictions as to the manner in which it is to be developed and managed.

THE Aberystwith Rural Council discussed a communication received pointing out a weakness in one of the stays of the famous Parson's Bridge, which, with the Devil's Bridge, is one of the chief attractions of the district. A member said that English visitors grouped together on the bridge and danced upon it. The chairman said the surveyor had been instructed to put up a notice that no more than two persons should go on the bridge at the same time.

THE Local Government Board have refused to sanction the further loan of 40,000*l.* which the Maesteg Council asked leave to borrow to complete the new storage reservoir at Blaencwmceryn. The Council have already expended nearly 30,000*l.* on the works without having found a satisfactory foundation for the dam. This additional loan would have exceeded the borrowing powers of the Council by about 6,000*l.* The Council have been advised by the Board to look out for a more satisfactory site.

At Chester on Saturday there was offered for sale by auction 27,300 acres of land extending from a mile and a half of Chester to Hilbre Island and West Kirkby at the estuary of the Dee. About 2,890 acres are enclosed farm lands and 1,060 are marsh grazing lands. All the estate, with the exception of two minor lots on the Flintshire side of the Dee, was first offered in one lot, and bidding started at 100,000*l.* and reached 126,000*l.* There was no advance on this sum, and the property as a whole was withdrawn and offered in individual lots.

THE Burmah Oil Company, whose headquarters are in Glasgow, have placed contracts with American and Glasgow firms for 275 miles of 10-inch iron tubes. The tubes are to form a pipe line for the conveyance of the company's oil from Burmah wells down to the river Irrawaddy. The Glasgow firms who have succeeded in gaining half of the contracts are Stewarts & Lloyds, Ltd., and Wilsons and Union Tube Company, Ltd. The contract, which is valued at half a million sterling, is the largest ever given out. The weight of material is about 30,000 tons.

THE cleaning and lighting committee of Edinburgh Town Council have received from a paper works company an offer to purchase the wastepaper collected throughout the city at present. All this wastepaper is handed over by the city's cleaning department to the distress committee, the city supplying waggons and men for the purpose; and the distress committee have recently taken premises in order to handle the collection more effectively and quickly. The offer of Messrs. Caldwell, if accepted, would mean, it is said, an income of about 700*l.* a year to the city. The offer is to be considered.

THE Gorton education committee have decided to pay for the cost of a new stove in St. Francis's school, on the

managers giving the undertaking that they will pay the whole of the cost in the event of the Local Government Board auditor surcharging the amount and this being sustained by the authorities in London. Hitherto the auditor has surcharged such payments (but they have been remitted later on appeal), on the ground that such things as stoves, screens, &c., were part of the structure and should be paid for by the managers. The next answer of the Local Government Board is awaited with interest.

THE Coal Smoke Abatement Society has now issued its report on the experiments carried out with a number of gas stoves with a view of ascertaining their effect upon health and their economic value. The general conclusion is that a properly-constructed gas stove, with a flue sufficiently large to carry away the products of combustion, although for constant work more costly than a coal fire, is quite as satisfactory from a hygienic point of view, and does not in any way vitiate the air of the room, nor does it produce any abnormally drying effect as is popularly supposed.

THE Motor Union have decided to make a grant to the Motor Van, Waggon and Omnibus Users' Association for the purpose of testing the legality of the action of the Great Eastern Railway Company in placing notices on a number of bridges over the Cambridge and Mildenhall line of the company, prohibiting heavy motor vehicles of two tons and upwards in weight passing over them. A member of the Board of Advisory Engineers appointed by the Association has inspected the bridges, and from his report it would seem that they are strong enough to carry the weight of heavy motor traffic.

THE Secretary of the Builders' Exchange, High Street, Birmingham, has on exhibit at the present time a collection of illustrations, mostly from the pages of our contemporary *The American Architect*, showing examples principally of Domestic architecture. Some particularly good examples are shown of the best style, but, as in all collections, there are naturally some particularly bad ones. The collection nevertheless is an interesting one to those engaged in architecture and building and will repay a visit. The Arts and Crafts Club about to be established in connection with the Exchange is progressing, the names of the present

members containing some of our prominent workers in arts and crafts.

DR. F. J. WALDO, the coroner of the City of London, gave an address recently upon fires and fire inquiries. In Scotland inquiry is made into all fires by the Procurator-Fiscal, who conducts a secret inquiry and has the power to swear witnesses. In England, Ireland and Wales there is no general judicial inquiry into non-fatal fires, except in the City of London, where the coroner, by a local Act, has power of inquiry at his discretion into all fires in the City, whether fatal or not. In ancient times all coroners had this right, which, however, fell into disuse after the reign of Edward I. It remained unquestioned until the year 1860, when in the ruling case of *Queen v. Herford* it was decided that non-fatal fires were outside the coroner's jurisdiction. The power was formally restored to the City of London by Parliament in 1888. The whole question is now under the consideration of the Home Office.

THE Surrey County Council will shortly invite tenders for the erection of a smallpox hospital at Ripley. The following permanent buildings will be erected:—An administration block containing rooms for matron and doctor, ample bedroom accommodation for nurses, large kitchen, store-room, &c.; a small ward block containing accommodation for twelve or sixteen patients, a disinfecting and a laundry block, a small observation block in which patients could be isolated if there were any doubt as to their suffering from smallpox, a porter's lodge, small discharging ward and a mortuary. In addition, foundations will be put in for three additional ward blocks on which temporary buildings could be erected in case of a serious outbreak. Other work to be done includes road-making, fencing, a supply of gas and water, and a proper system of drainage. The total cost it is expected will not exceed 14,000*l*.

MR. H. R. BURRILL, a United States special agent, in a report to the Bureau of Manufactures, Washington, on the commerce of Western Australia, says that the timber industry is still in its infancy, but from the latest and most accurate figures obtainable showing its production, enough can be learned to gauge its importance and value as a national asset and the steady rate of its development. The demand for Western Australian hard woods for railway

sleepers, street paving blocks, piles for wharfs and piers, jetties, bridges, &c., is increasing both in the Commonwealth and for export. The United Kingdom is the chief buyer of these woods outside the Australian States, but a fairly large quantity finds its way into foreign countries. A recent Government estimate gives 8,000,000 acres of jarrah forest and 1,200,000 acres of kauri forest, and the latest published records of the Western Australian Land Department indicate an acreage of only 904,260 of forest land under timber leases and licenses. These figures show the great expansion possible for this industry under intelligently directed effort, and its increasing importance as a source of State wealth. No foreign hard wood can hope to compete with the Australian kinds.

THE town clerks of Hamilton have received the opinion of the Solicitor-General, Mr. James Avon Clyde, K.C., and Mr. C. D. Murray on the question of the legality to erect the new town hall from the Common Good. This has been a burning question in Hamilton for a lengthened period. The designs of the hall are the complement of those of which the new public library now in course of construction form a part. Twice the question has been submitted to a poll of the ratepayers with adverse results, the ground of the objectors being that the cost was greater than the town could bear. Latterly Provost Keith carried a motion in the Town Council to have the buildings erected out of the Common Good. Following on that the objectors obtained the opinion of the Dean of Faculty and Mr. M. P. Fraser, advocate, that this new procedure was illegal. The town clerks gave a contrary opinion, and in the circumstances it was resolved to obtain the opinion the result of which has now been received. Counsel advise that it is legal to erect the town hall out of the Common Good and that the Town Council are not bound to follow the procedure prescribed in the Local Order of 1903 by way of a poll of the householders. They, however, point out that, in consideration of the circumstances that the Town Council have already consulted the ratepayers, and while the Court was slow to interfere with municipal corporations in the administration of their affairs, it might not be safe to proceed without fear of interdict.

### SEWER VENTILATION.

At first it seemed as if ventilation was accomplished when an opening of any kind was made by which sewer gas could pass into the air. So long as the outlet was at a sufficient height disagreeable results did not follow. But it was only a partial effort. What was no less required was to introduce fresh air into the sewer. That was sometimes attempted by separate pipes with special apparatus. But the patent "Omnifex" system of Mr. W. E. Farrer attains both ends simultaneously and by means of the same appliance. Externally there appears to be a tube rising to the air, the lower part up to a reservoir or bonnet being of a larger diameter than the upper part. The larger tube contains two tubes, one leading to the manhole and extending to the upper air, while the outer tube has ribs or diaphragms by which the air is brought into the drain. There is no mere mingling of foul and fresh air, but the latter is brought into operation at the places where it can be most effective. The system has simplicity to recommend it. There is definiteness in the arrangements, and it is an impossibility that foul air or gases should escape at the street level, where they form a terrible nuisance. Special flap valves have been devised which confer additional security. Farrer's patent disc valves are made to meet rough handling. The parts cannot get out of order, and there are no keys or handles which can become mislaid when the moment for use arrives. By means of wedges and bars the door or opening is kept in a rigid position, which allows of no more escape of air or gas than in a locked penstock. And until the simple but massive parts are altered in their positions the valve cannot be opened. The disc valves are particularly well adapted for their purpose.

### THE PLANNING OF CITY SUBURBS.

A CONFERENCE has been held at Westminster to consider the question of the planning of suburbs to cities and large towns. It was presided over by Sir James Woodhouse, the newly appointed member of the Railway and Canal Commission. Those present included the Lord Mayor, the Deputy Lord Mayor and Town Clerk of Manchester, besides representatives of Liverpool, Accrington, Bradford, Leeds, Hull, Blackburn, Harrogate, Macclesfield, Rochdale, Eccles,

Nelson, Crewe, Burnley, Sheffield, Bolton, York, Southport and Huddersfield. The matter arose out of the conference held at Manchester six weeks ago, at which the following resolution was agreed to:—"That in the opinion of this conference it is necessary for the safeguarding of the health and welfare of the inhabitants of our towns that Parliamentary powers should be conferred on town councils and other local authorities to enable them to control, by means of town extension building plans, the laying-out of all land within the boundaries of towns, or which may hereafter be incorporated. That in the opinion of this conference it is desirable that some central authority should be empowered to confer with town councils and other local authorities in regard to the plans for contemplated building upon the areas between contiguous towns." After carefully considering the question it was resolved, on the motion of the Lord Mayor of Manchester, to refer the resolution to a committee consisting of representatives of the largest towns, to prepare details of the proposal.

### ENGLISH FONTS.

THERE was not one of the late Holman Hunt's wall-paintings in the Manchester town hall which caused more dissatisfaction than the representation of the baptism of one of the early chiefs of the district. He knelt in a large vase-shaped font, and although there could be no doubt about his earnestness, it had to be allowed that his position was most uncomfortable. The ceremony seemed so remote from an ordinary christening in a modern Manchester church, visitors seemed to think that archaicism had triumphed over truth. The earliest baptisms, it is believed, were those in the river Jordan. And at various times that precedent was imitated. The subject is one deserving greater attention than it has obtained, and through the enthusiasm of Miss A. K. Walker a treatise on the subject, illustrated by a greater number of photographs than have hitherto appeared, will in due course of time be completed. The first article has been published in the *Stone Trades Journal*, and is devoted mainly to fonts that still remain in Sussex. They vary from a plain tub or well-head at Littlehampton to an architectural composition like that at Aldingbourne. The

local Sussex examples are supplemented by illustrations from ancient ivories and other representations recording the practice at different times. For lovers of ecclesiastical archaeology the subject is one of the most important.

### BIRMINGHAM ELECTRICAL SUPPLY.

THE first meeting of the new session of the Birmingham Local Section of the Institution of Electrical Engineers was held on the 21st inst. at the University. The new chairman, Mr. R. A. Chattock, the city electrical engineer, was unable to be present owing to an attack of influenza. His paper was read by the hon. secretary. He proceeded to deal with the electrical supply in the city, and said that in one way Birmingham was to be congratulated upon having delayed the development of its electrical supply until the present time. By so doing it had been able to see how electric supply had been developing in other large centres of commerce, and it had been in the position to start afresh and to make provision for dealing with the enormous power supply that it was confidently anticipated would be required in its area. It had also been able to adopt the most modern and efficient types of machinery for giving the supply and to proportion the size of its units, in accordance with the demand that might be expected. Already, although the first instalment of the general scheme was barely completed, the large manufacturers were looking carefully into the question of adopting electrical power for driving their works, and they were doing that not in a hesitating way, such as by installing a few small motors in their works, but many of them were considering the installation of some hundreds of horsepower, varying from 200 or 300 to as much as 1,500. It would therefore appear that the spirit in which Birmingham was dealing with its electrical supply was being appreciated by its citizens, and there was every indication that the policy adopted was a right one, which would eventually tend to greatly increase the welfare of the city. As an initial reason for developing this large scheme of supply Birmingham had its tramways, which it was decided to electrify, and by obtaining such a load upon its new station it assured itself of an immediate return upon a considerable proportion of its capital outlay. It was, however, con-

## CORRUGATED IRON FOR BUILDINGS

Superseded by the use of

(FIREPROOF)

# Kent Slab

(FROST AND  
WEATHERPROOF)

Buildings for all purposes which have hitherto been constructed of Galvanized Iron and Matchboarding can now be built Cooler in Summer, Warmer in Winter, and perfectly Fireproof, by the use of **KENT SLAB**. The Cost is no more, and as they do not require the repairs and painting of Galvanized Iron the cost of upkeep is done away with, and the lasting qualities are far in advance of any Iron Building.

**Kent Slab is the future Building Material.**

Write for Catalogue and list of Works carried out before using anything else.

**The Kent Slab Co., 27 Queen St., London, E.C.**

fidently anticipating a much larger demand than its tramways could give it, and by offering legitimate inducements to large power consumers there was no doubt that an enormous supply business could be built up and made remunerative in an area such as they were considering. Dealing with the question of a supply for lighting, he said the public had been very quick to recognise the great advantage of using lamps which had a higher efficiency than that of the ordinary incandescent lamp. He referred to the "Tantalum" and the "Nernst" lamps. Although in some cases their adoption was reducing the amount of current sold to certain consumers there was no doubt that the cheaper form of lighting was popularising the use of electric light, and many people were increasing the quantity of light they used now they found they could get it at a cheaper rate. He was of opinion business would be considerably stimulated by this development. He described the "Cooper-Hewitt" or "Mercury vapour" lamp, which consisted of an electric arc passing through mercury vapour in a vacuum tube. It was one of the most efficient forms of lighting. Many workshops in the country were being fitted up with this form of lighting, and there would shortly be some in the city. The fact that a direct current supply was available in so many centres in the city suggested the advisability of splitting up the supply to the tramways into districts. In that way less interference from possible breakdowns was anticipated, and arrangements had been made so that should the supply in any one district fail, the other districts could take it up between them.

### MODEL COTTAGES EXHIBITION, SHEFFIELD.

THE exhibition of model cottages to be held for Yorkshire and the North Midlands in Sheffield next year, under the auspices of the National Housing Reform Council, will be known as the Firth Park exhibition.

The classes of cottages to be erected on a site belonging to the City Council just beyond Firth Park will be as follows:—Class A.—Cottages containing two bedrooms, living room and scullery, with a bath for each house, the maximum price, to include architect's fees and builder's profits, but not to include land or roads, being 175*l*. Class B.—Three

bedrooms, living room, scullery and bath, with a maximum price of 200*l*. Class C.—Three bedrooms, parlour, living room, scullery and bath, with a limit of 225*l*. Twelve houses will be erected to the acre, and a feature of the exhibition will be the planning carried out on model lines. The cottages are to be built either singly or in blocks of not more than four. Gold, silver and bronze medals will be awarded for the best cottages in each of the classes.

The judges already selected include Mr. E. M. Gibbs (past president of Sheffield Society of Architects), Mr. E. Holmes (the present president), Mr. C. F. Wike (city surveyor), and a nominee of the Master Builders' Association. There will also be three other judges. Special furniture and gardening competitions will be held, and a display of building materials, as well as a site planning competition, the conditions for which are to be issued at once. The guarantee fund for the exhibition has been opened, and support to the extent of upwards of 100*l*. promised before any public appeal has been made.

If possible, the exhibition will be opened about the middle of June.

### THE PANAMA CANAL CONTRACT.

THE enormous quantities involved in the contract for the Panama Canal are indicated by the following figures. The first section, from the Caribbean Sea to the Mindi river, will be a channel with a bottom width of 500 feet and a depth below mean tide of 42 feet; this will call for about 9,455,000 cubic yards of dredging, mostly in soft mud, although some coral rock may be encountered. The second section, from the Mindi river to the Gatun locks, is a channel with a bottom width of 500 feet and a minimum depth of 42 feet; it calls for 11,000,000 cubic yards of excavation, partly by dredging and partly by dry methods, about one-third being indurated clay or rock and two-thirds earth. The third section is the Gatun locks, which are not yet definitely located nor even their number of lifts determined. The quantities in the case of three lifts of 28½ feet each are 3,660,000 cubic yards of excavation, 660,000 cubic yards of backfill, 1,302,780 cubic yards of concrete, 5,700 cubic yards of cut stone, 20,000 cubic yards of brick, 130,000 feet of timber, 1,830,000 lbs. of cast-iron, and steel gates weighing

29,230,000 lbs.; no estimate of quantities for locks having two lifts of 42½ feet has yet been made. The fourth section is the Gatun dam, a great embankment of 21,200,000 cubic yards. The fifth section is the regulating works at Gatun, calling for 1,580,000 cubic yards of excavation, 189,000 cubic yards of concrete, and Stoney gates weighing 5,000,000 lbs. The sixth section, from Gatun locks to Las Cascades, is the lake portion of the project, the channel having a bottom width varying from at least 1,000 feet at the west end to 300 feet at the east end, and calling for 24,000,000 cubic yards of excavation, of which about half may be rock. The seventh section, with a bottom width of 200 feet, in which the famous Culebra cut occurs, calls for 39,000,000 cubic yards of excavation in rock of various degrees of hardness, clay, earth, hardpan and volcanic material. The eighth section, from near Paraiso to the Pedro Miguel lock, has a bottom width of 300 feet, and calls for 6,835,000 cubic yards of rock and soft earth excavation. The ninth section is the Pedro Miguel lock, having a lift of 30 feet; it is not yet fully designed, but the quantities involved will probably embrace about 1,170,000 cubic yards of excavation, 1,100,000 cubic yards of dam embankment, 390,000 cubic yards of backfill, 513,612 cubic yards of concrete, 4,000 cubic yards of cut stone, 8,000 cubic yards of brick, 85,000 feet of timber, 732,000 lbs. of cast-iron, and steel gates weighing 19,500,000 lbs. The tenth section is Lake Sosa, where about 1,680,000 cubic yards of excavation will be required, some of it in rock and some in earth easily dredged. The eleventh section is the Sosa locks, having two lifts of 27½ feet each, which are not yet fully designed; the approximate quantities are 1,430,000 cubic yards of excavation, 950,000 cubic yards of backfill, 992,800 cubic yards of concrete, 6,000 cubic yards of cut stone, 14,000 cubic yards of brick, 145,000 feet of timber, 1,281,000 lbs. of cast-iron and 37,180,000 lbs. of steel in the gates. The twelfth section embraces 6,300,000 cubic yards in the La Boca dam and 5,397,000 cubic yards in the Corozal-Sosa dam. No estimates have yet been made for the regulating works. The thirteenth section, from the Sosa locks to deep water in Panama Bay, calls for 8,528,000 cubic yards of excavation in material which is believed to be nearly all soft. The fourteenth section is the relocation of the Panama R.R. from the Mindi river to Panama; no estimate is given of

the quantities involved, although it is certain to require some heavy embankments.

The total of these figures is enormous, when it is considered that they are for a single contract, for they amount to 108,338,000 cubic yards of rock and earth excavation by dredging and in the dry, 2,998,000 cubic yards of concrete, 35,997,000 cubic yards of earth dams and backfill, 3,843,000 lbs. of iron and 90,910,000 lbs. of fabricated steel. It is manifest that the execution in a tropical climate, with imported labour, of a lump-sum contract involving such quantities would be beyond the resources of any contractor. It is difficult to see how the work could be prosecuted satisfactorily except by some plan by which the nation's credit financed the undertaking and the various items of work were executed by contractors experienced in them and working harmoniously. None of the criticisms of the proposed form of contract have advanced anything better, or, in fact, have attempted to do more than suggest some features in which some of the terms of the contract could be made more fair.

#### NEW SAN FRANCISCO.

A REPORT received through the Foreign Office, from H.M. Consul-General (Mr. C. W. Bennett, C.I.E.) at San Francisco, gives the following account of the situation at present:—

There is very little sign of any permanent construction. The mass of debris, millions of tons of it, remains more or less where it was. The amount removed is barely noticeable, although in the aggregate it is large. Some of the principal streets are cleared sufficiently to allow of the passage of electric cars and wheeled traffic, but except in some of the main streets the pavements are still more or less obstructed. A mushroom city of wooden shanties, "shacks," has sprung up on the edge of the burned district and near the water-front; street cars are running on nearly all the old routes there, and vehicles of other kinds are available for business.

Business is active, but the wholesale and retail trade is much hampered for want of warehouses and depôts for storing stocks. The volume of trade has probably not much decreased, but the nature of the goods sold is not

what it was before the disaster. Everything is of a cheaper kind. Luxuries are not to be obtained. Men who smoked shilling cigars now smoke threepenny ones. Men who wore six or eight suits of clothes made to order at seventy or eighty dollars a suit now buy ready-made clothing at about twenty-five to thirty dollars a suit and order half the number of suits or less. Economy is practised in every direction.

Had things otherwise been normal, had the insurance money been paid up well, and had not labour troubles come in an acute form on top of a disordered commerce, things might have righted themselves more quickly. But insurances in many cases have not been paid. Several of the companies having "earthquake clauses" have definitely refused. Some have paid small claims of a few hundred dollars. Other companies have paid up in full; others again at a reduction varying from 10 to 50 per cent. In numberless cases the insurance money was required to organise the business or to tide over present difficulties. It is not forthcoming and trading is hard. No firm knows exactly how it stands. This applies also to capitalists who, before the earthquake, were millionaires.

Speculative trading after the disaster has caused further losses. It was at once seen, for instance, that cement would be required in large quantities. Several ships were chartered to bring it over, and the first arrivals were sold at good prices. But everybody ordered cement, and the market is overstocked and there is no place to store it. The cash for these orders was, as a rule, advanced by the banks against the bills of lading. The banks lose—temporarily, at any rate—the advance made, and the consignees are still more deeply burdened with debt. San Francisco is thrown back practically to the days of 1849 with this one exception—she now has trans-continental communication with the Atlantic States and a steamship service on the Pacific. This is an enormous advantage and will aid in re-establishing trade on new lines.

It is questionable whether the payment of insurance money has really benefited the insurers to any great extent, at any rate those who were really in need of it. The case of large insurers need not be considered, for, as a rule, the nonpayment of insurance would not break them. There were, however, an enormous number of artisans, clerks

and junior employes who have saved a little money and purchased a piece of land. Sometimes they had paid the purchase money in full, in others they had mortgaged their interest in the "lot" to build a house and pay for it in instalments. The savings banks were in the habit of advancing to an owner three-fifths of the value of the ground and of the house upon it. The fire comes, destroys the house, the insurance assigned to the savings bank was paid in whole or in part (or was not paid at all) and credited in part payment of the mortgage. For the remainder of the mortgage the bank forecloses and the owner loses both lot and house. Thousands of such cases will occur, and the insurance money will benefit only the banks. The banks will therefore be loaded up mainly with real estate, barely worth half of the money advanced on it in the first instance. In a few months the banks must sell this mass of real estate, and at, no doubt, a considerable loss.

The commercial banks are extremely chary as to making loans, which everybody wants, as the clients have no security to offer. Practically everything has been burned down, business blocks, private houses, stocks; nothing is left but vacant "lots," at times already mortgaged, and covered with debris which it will cost a large amount to remove to make ready for building on.

Large sums formerly invested in California have been withdrawn, and it is feared that much more may be. In view of such a disaster as has recently befallen San Francisco, the above facts are depressing enough, but all these difficulties have been augmented a hundredfold by labour troubles.

If the earthquake made outside capitalists cautious as to investments in San Francisco, the labour question, now so acute, has frightened them still more. Californian capitalists, of course, whatever happens, must support the city even by throwing good money after bad in order to save something.

Even before the earthquake and the advance in wages a building could be put up in Los Angeles, where labour unions are not supreme, for 30 per cent. less than in San Francisco. Now the cost of building is almost prohibitive, and a man will think carefully before he puts up, at enormous cost, a building which can hardly make any return on the capital invested. Finally, the cost of living has increased fully 20 per cent. since the fire.

## "KLEINE" PATENT FIRE-RESISTING FLOORING.

FLAT arches of brickwork are familiar to the youngest builder. To what extent they are practicable is a question which has often been debated. Brunel, who was in advance of his age, demonstrated by a very flat arch at Maidenhead that brick laid with hoop-iron along the courses was capable of being used to an extent that appeared to be incredible. That inventive engineer would, if he were living, be certain to approve of the Kleine flooring, in which hollow bricks, flat metal bars and concrete are combined to constitute a floor that is light, strong, fire-resisting and capable of being employed to cover regular or irregular spaces.

Practically the system may be considered as a slab, which in modern phraseology can be described as "armoured brickwork." It corresponds with armoured concrete in any tensile strains being sustained by the metal bars. There is, consequently, no thrust, and apparently there is no probability of contraction or expansion in the brickwork, unless to an infinitesimal degree. It is, however, of little advantage to confine attention to general conditions. Floors in factories and warehouses have to sustain heavy loads; besides, there is the contingency of a body falling from a height upon them. To determine how far a Kleine slab was equal to both purposes was the object of tests lately made at Irongate Wharf, Paddington, in the presence of several experts, and under the direction of Mr. A. T. Walmisley, M.Inst.C.E.

For the testing two slabs were prepared by ordinary workmen without special supervision. The first measured 12 feet by 5 feet 3½ inches, and was supported by rolled joists. It was made up of special hollow bricks placed alternately 6 inches and 4 inches deep. A metal bar 1½ inches by ½ inch was inserted in the centre of each longitudinal joint, and was turned at right angles at the ends. Over the bricks was laid a bed of 6 to 1 concrete. On the slab pig-iron was piled with care until the load on the 63½ square feet of floor attained a distributed load exceeding 25 tons, or 7.9 cwt. per square foot approximately. As the safe load was assumed to be 2 cwt. per square foot, the strength before collapse was nearly four times in excess of requirements. The ten-

KLEINE PATENT FIRE-RESISTING FLOOR

GENERAL ARRANGEMENT OF TEST

sion bands were found to be unbroken, there was no thrust on the unloaded sides or extensions. The concrete was not well mixed and did not appear to add to the strength. The second slab was used for tests by falling weights. In construction it corresponded with the first. The concrete was omitted, but the bricks were covered with sand. A distributed load of 4 cwt. was applied without any recorded change. It was removed. Then a weight of 84 lbs. was allowed to fall from a height of

8 feet. The sand was disarranged by the impact, and in the centre of the floor was a depression of 2 inches. The sand was removed and a like weight fell from a height of 9 feet. The lower part of the bricks for about 18 inches was broken. For the third time the weight fell on the centre of the slab and made a hollow about 8 inches square, but the iron band was intact, and Mr. Walmisley recognised the superiority of flat to round iron for such purposes.

## THE BRITISH SANITARY CO.'S NEW AND IMPROVED SELF-ACTING EARTH CLOSET.

### HIGHEST AWARDS:

Birkenhead, 1881; Newcastle-on-Tyne, 1882; Glasgow, 1883; Dublin, 1884; Plymouth, 1885; Edinburgh, 1886; Glasgow, 1887; Haddington, 1892; Liverpool, 1894; Newcastle-on-Tyne, 1896.

**For Simplicity and Efficiency their Closet stands alone.**

**Medal from the Society of Architects, London, for superiority of workmanship and materials used in manufacture of Closets.**

### ITS ADVANTAGES ARE:—

1st. The simplicity, strength of the mechanism, and non-liability to get out of order. 2nd. It is self-acting. 3rd. The effective distribution of the deodorising material thoroughly covers and absorbs all offensive matter and smells. 4th. The large capacity of the containing magazine holding the earth or other deodorising material. 5th. The very moderate price it can be sold at as compared with other closets not even possessing the above advantages.

CATALOGUE UPON APPLICATION.

Thirty-third Year of Publication. Now Ready.

**"THE ARCHITECT'S DIARY" for 1907.**Specially prepared for the use of **ARCHITECTS, SURVEYORS, and ENGINEERS.**

These Publications contain not only the usual Diary, ruled and printed to a particular form, specially adapted for professional use, but, in addition, an Index, a Note-Book, a Rent and Insurance Register, a Cash Book, and a Ledger, with all the usual diary information, and much special matter referring to the various Architects' and Engineers' Associations; a digest of all the Acts passed last Session; contain also cases decided in the Superior Courts of Justice during the legal year, from November 1905 to August 1906, of interest to the Profession; Regulations of the London County Council under the orders of the Council applying to Music, Dancing, Theatre, and other Licenses; complete List of Metropolitan Surveyors and Districts, with Official and Private Address; Alphabetical Index to the Practical Statutes, Stamp Duties, &c., the whole forming in **ONE VOLUME A COMPLETE SET OF BOOKS FOR THE YEAR.** The Editions are—  
 No. 12.—One page to a day, size 8½ in. by 5 in., cloth, gilt, 4/6. | No. 13.—Two pages a day, size 8½ in. by 5 in., cloth, gilt, 5/6.

**"THE BUILDER'S DIARY" for 1907.**Specially prepared for the use of **BUILDERS and CONTRACTORS.**

No. 11.—Two days on a page, ruled and printed to a special pattern; also contains Bill Register, Note Book, Rent, Insurance, and Mortgage Register, Cash Book, Ledger and 130 pages of Tables of great value to all engaged in the Building Trade, in all 460 pages, size 8½ by 5, bound, whole cloth, gilt. Indexed, and paged to end of Diary. Price 4s. 6d.

"For use in the office of Architects and Builders they are better fitted than any diaries with which we are acquainted."—*The Architect*.  
 "The novel and valuable feature of these Diaries is that each volume forms in itself a complete set of books for the year."—*The Builder*.  
 "We have used them ourselves throughout the year with much satisfaction, and are glad now to draw attention to the new batch sent us."—*The Building News*.  
 "Messrs. Hudson & Kearns's Diaries need no recommendation save a trial."—*The British Architect*.  
 "The Diaries published by Messrs. Hudson & Kearns are quite unrivalled for convenience and comprehensiveness."—*Building World*.  
 "These Diaries may be said to have become the Diaries for the professions for which they are issued."—*Illustrated Carpenter and Builder*.

# The DEVON FIRE

Reg. No. 487790.

## FIRST PLACE in TESTS

**The DEVON FIRE.**

'Report in "Lancet," May 19, 1906:

"As a final result of the whole of the tests, the examiners find that of the grates submitted, those of Messrs. Candy & Co. and two other firms are the best, showing practically equal results.

"The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained: the fires were bright and clear".

P.N.B.—Thirty-seven grates were tested, including nearly all the best known modern types.

**HIGHEST AWARD and MEDAL** at the 1906 (Bristol) EXHIBITION of the ROYAL SANITARY EXHIBITION.

### IMPORTANT TESTS OF OPEN DOMESTIC GRATES

Carried out officially by the Smoke Abatement Society in conjunction with H.M. Office of Works at the New Government Buildings, Parliament Street, London.

**1.—Coal Consumption during 32 hours.**

Thirty-six Competing Grates. 27'92 lbs.

The "DEVON" Fire. 20'45 lbs.

Saving 7'49 lbs., or more than 25%.

**2.—Heat.**

Thirty-six Competing Grates. 7'13° F.

The "DEVON" Fire. 7'4° F.

Increase 27° F., or nearly 4%.

**3.—Smoke Produced.**

Thirty-six Competing Grates. 1'09

The "DEVON" Fire. '79

Saving more than 25%.

**The DEVON FIRE**

is made in sizes and designs to suit any room, and can easily be fixed to existing mantels.

The saving in coal will be found to quickly repay the cost of installation, to say nothing of increased comfort, better ventilation, and reduction in servants' work.

Supplied in a charming variety of the most artistic colours, in tiles, bricks, or bright green, and faience or antique glazed blocks.

**Price from £2 upwards.**

Send for Illustrated Price Lists and full copy of Report of Tests.

**Works:**

Heathfield Station, NEWTON ABBOT, DEVON.

London Show Rooms: 87 NEWMAN ST., OXFORD ST., W.

NEW YEAR'S SPECIAL ISSUE.  
:: :: 77th VOLUME. :: ::

6 to 11 IMPERIAL BUILDINGS,  
LUDGATE CIRCUS, LONDON, E.C. December 1906.

Dear Sir,—On Friday, January 4th next, TWENTY THOUSAND (20,000) COPIES of "**THE ARCHITECT AND CONTRACT REPORTER**" will be sent to ARCHITECTS, BUILDERS, and CONTRACTORS throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"**THE ARCHITECT**" is, in its Advertisement Columns, the *most reliable* reference for all who are engaged in Building Operations, and is acknowledged to be *the best medium for Advertisers*. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than *one-fourth* the cost of sending 20,000 Circulars by post, and it is well known that Circulars are frequently thrown into the waste basket unread. Our *New Year's Double Number* always contains beautiful illustrations and valuable letterpress, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that if you wish to secure space for an Advertisement, we shall be much obliged if you will *communicate with us* without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir, yours faithfully,

GILBERT WOOD & CO., LIMITED.

BRONZE MEDALS, HIGHEST AWARD, SANITARY CONGRESS HEALTH EXHIBITIONS, 1899, 1902, and 1903.

Payments extended over any number of years for Corporations and District Councils.

## NOTICE TO ADVERTISERS.

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

## EDITORIAL NOTICES.

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL

ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

## TENDERS, ETC.

\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

## COMPETITIONS OPEN.

GLASGOW.—Dec. 12.—The Corporation of Glasgow invite competitive designs for laying-out the estate at Riddrie, by the erection thereon of small self-contained houses. Premiums of 75l., 50l. and 25l. will be awarded. Mr. A. W. Myles, town clerk, City Chambers, Glasgow.

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. Premiums of 50l. and 25l. Deposit 2l. 2s. Mr. James Wm. Johnson, clerk to the Governors, Council Offices, Goole.

IRELAND.—Dec. 31.—The Local Government Board for Ireland invite from architects the submission of designs for labourers' cottages in rural districts. Premiums of 50l., 30l. and 20l. for the three best designs. A copy of the conditions of the competition may be obtained from the Secretary of the Local Government Board, Dublin.

MONTEVIDEO.—Dec. 14.—La Comision Nacional de Caridad require competitive plans for new foundling hospital with approximate cost. Plans and report, under mottoes, and, in sealed envelope, name and address of competitor. The four selected plans will receive 212l. each, and will be asked to further compete. Further particulars from the Consulate-General for Uruguay, 5 and 6 Clement's Inn, Strand, W.C.

SUNDERLAND.—Feb. 1.—The committee of the Sunderland infirmary invite designs for a children's hospital. Premiums of 100l., 50l. and 25l. are offered. Deposit 1l. 1s. Mr. Thomas Robinson, secretary, Infirmary Offices, Bank Buildings, Sunderland.

WOLVERHAMPTON.—Dec. 31.—The Board of Management of the Wolverhampton and Staffordshire general hospital, Wolverhampton, invite competitive designs for a nurses' home adjoining the hospital. Mr. J. Stephen Neil, house governor and secretary.

The commission appointed to report on Italian ports has submitted to the Minister of Public Works a scheme for the improvement of nearly 100 ports, and of the lights on the coast during the years 1907-17, the total expenditure being placed at about 7,200,000*l.* The estimate does not include the cost of railway extension which will be needed at some ports. A considerable portion of the sums voted in previous years for extraordinary expenditure on port works still remains to be disbursed. If the proposals of the commission are sanctioned the total expenditure on these works during the next ten years will amount to about 10,000,000*l.*

In a consular report issued from the Washington Chamber of Commerce it is stated that a Hungarian chemist named Brunn claims to have discovered a liquid chemical compound which renders certain kinds of matter proof against the effects of time. He asserts that it doubles the density of nearly every kind of stone and renders it waterproof. It imparts to all metals qualities which defy oxygen and rust. The Professor says that while travelling in Greece twenty-five years ago he noticed that the mortar in stones of ruins which were known to be over 2,000 years old was as hard, fresh and tenacious as if it had been made only a year. He secured a piece of the mortar and has been working on it ever since until now, when, he says, he has discovered the secret. His discovery, he claims, will at the least double the life of metal exposed to the air, such as in bridges, railroads, vessels and tanks.

Your bathroom equipped with  
**"Standard"**  
 Porcelain Enamelled Baths  
 and One Piece Lavatories  
 Means Comfort and Health to your Home

**"Standard"** Ware is sanitary because its snowy surface is non-porous, without crack or crevice for dirt to lodge. The complete equipment can be bought and installed at very moderate cost. A bath-room equipped with **"Standard"** Ware adds a cash value to property far in excess of cost of installation, and brings more comfort and satisfaction than any room in the house.

Write for our elaborate catalogue, **"MODERN BATH-ROOMS,"** also for our special lavatory booklet, showing many new patterns. Ask for Booklet No. 6, post free on application to Dept. F.,

who was responsible for that organisation and for the status of the firms exhibiting; and whether he proposed to consider how the British department of international exhibitions might be better organised in future. The President of the Board of Trade said the British section was organised by an unofficial commission, composed of a number of representative men, chiefly drawn from British chambers of commerce and other bodies directly concerned with trade and industry. That body was formed mainly under the auspices of the London Chamber of Commerce. No complaints of the character indicated had reached the commission. As regards the last part of the question, a departmental committee was sitting to consider questions affecting the participation of this country in international exhibitions.

EXCEPTION appears to have been taken to the comments on the treatise relating to "Public Baths and Washhouses," by A. W. S. Cross, which appeared in our issue of November 9 last, more particularly as regards the heating and ventilation of Turkish baths, and in this connection our representative was recently invited to inspect the Charing Cross Turkish Baths in Northumberland Avenue, W.C., which comprise a suite of rooms having a floor space of about 12,000 feet for gentlemen, with a smaller set in a separate contiguous building for ladies. In the erection and fitting of these baths the proprietors, Messrs. Nevill, have brought their long experience and practical knowledge to bear on all questions connected therewith, so as to make them the most complete and comfortable extant. The heat in the bath-rooms is maintained by the convoluted stove, and the ventilation effected by the principle first introduced at the London Bridge baths. The cooling-rooms, which are surmounted by a lofty dome, are fitted in a luxurious manner, and we noticed that ventilation is much facilitated by the employment of several of the well-known Tobin ventilators. Attention is moreover called to the fact that the plans, elevations, &c., for the block of buildings containing the baths, which occupy a prominent position in Northumberland Avenue, were examined and approved by the Council of the Royal Institute of British Architects.

THE Mayor of Norwich presided at the annual meeting of the Plumbers' Registration District Council for Norfolk

and Suffolk. The Mayor was supported by Mr. Alderman Dakin, president of the District Council; Mr. A. E. Collins, city engineer; Mr. J. Brooks, chief inspector of nuisances; and Mr. F. W. Brock, of the Technical Institute. The Mayor expressed his opinion that the registration of plumbers was a grand object in which everybody was more or less interested. He congratulated the young plumbers who attended the plumbing classes with the object of improving themselves in the principles and practice of their trade. There would certainly not be so many men out of employment if only they could be got to learn a trade thoroughly when they were young, and he much regretted the decay of the apprenticeship system. Mr. A. E. Collins, city engineer, stated that there was not the slightest question as to the great improvements that had been effected in plumbing work, and these improvements had undoubtedly resulted in the greatest possible benefit to the community. He would like to see the registration of plumbers made compulsory, and if it was the law that an inspector of weights and measures, who only had to do with slight differences of weight, should be compulsorily qualified, it was very much more important that persons who had to deal with matters that affected the health and real comfort of the community should not be allowed to practise unless they could show themselves to be absolutely capable.

#### SOCIETY OF ENGINEERS.

At a meeting of the Society held at the Royal United Service Institution, Whitehall, on Monday evening, December 3, Mr. Maurice Wilson, president, in the chair, a paper was read on "The Prevention of the Bacterial Contamination of Streams and Oyster Beds," by Mr. W. Pollard Digby and Mr. Henry C. H. Shenton, and of which the following is an abstract:—

The authors first pointed out the great danger to health arising from contamination by sewage of rivers and fisheries. Proofs were quoted from reports of the Royal Commission on sewage disposal. Bacterial purification was formerly not considered, chemical purity being the only qualification

demanding by river authorities. Effluents from good works, however, contain few pathogenic germs, as shown by Dr. Rideal's Caterham experiments and by others. The authors showed that the fourth report of the Royal Commission insists on the importance of bacteriological purity.

The practical side of the question was next considered, and the methods for obtaining chemical purity in the effluent were discussed. The sterilisation of sewage effluent was then dealt with under the heads of, its need, the manner in which it may be effected, the cost of effecting it and the question upon whom the cost should fall. The authors dwelt upon the absolute necessity of making the effluent chemically pure before proceeding to sterilise it. The fact that pathogenic bacteria must be combated wherever met was insisted upon. If sewage containing a large proportion of organic matter were sterilised, this organic matter remaining in the river would act as a food for other disease-producing micro-organisms entering the river from other sources.

The various methods of sterilisation were then described. These include boiling, which was stated to be quite impracticable for sewage effluents; treatment with various chemicals, such as acids and acid solutions, copper compounds, permanganates, sodium manganate, the cost of which processes was declared to be so great as to make them practically impossible. Chlorine compounds, such as chloride of lime, were mentioned, also liquid solutions of hypochlorites, which it was stated could be produced either by chemical means or by various electrolytical processes. Chloros, a chemically produced solution of sodium hypochlorite, was referred to as having recently been used by the Metropolitan Water Board for sterilising sewage effluent, and also by the Lincoln Corporation during the typhoid epidemic.

The history of the application of hypochlorite solutions was then given. The Guildford experiments of 1897 and the Maidenhead experiments with the hypochlorite solution known as "electrozone" were mentioned. The Guildford tests with oxychloride solution, the Hermite trials at Worthing, the Woolf trials (Danbury, U.S.A.), the surface sterilisation at Rickers Island by the Woolf plant, and Woolf's installation at Brewster, N.Y., were also referred to.

A brief history of the electrolytic production of sodium

hypochlorite was next given. The practical application of hypochlorite solutions to the effluents from contact beds or filters was shown to be a very simple matter. No extra fall at the works was required and it was stated that sterilisation could be accomplished in the discharge channel in the space of from five to seven minutes. The test for sterilisation or for an excess of sterilising solution in the effluent was shown to be very simple, needing no special knowledge. As regards the cost of the application, it was shown that the cost of sterilising 61,600 gallons of effluent chemically pure—i.e. not liable to secondary decomposition—would amount to 10d., exclusive of capital outlay, which was stated to be small.

The position of the Local Government Board with regard to the absolute purification of sewage and water used for drinking purposes was discussed. The authors consider that no disease germs should be allowed to enter a river, the water of which was used for drinking purposes, if it could possibly be prevented; also that if steps were taken in the Thames and the Lea to sterilise sewage effluent, the cost would be very much less than that of obtaining water from Wales or elsewhere. They thought that if sewage and trade wastes entering the river were absolutely purified the pollution due to land drainage and surface water would not cause the water to be unfit for drinking after the water authorities had purified it. If necessary and desirable it could also be sterilised. The authors stated as their opinion that the cost of works needed to sterilise effluent from sewage works ought under these circumstances to be borne by the water authorities rather than by the ratepayers.

#### PATENT LAW REFORM.

A PAPER was read last week at the Society of Arts by Mr. John William Gordon on "Patent Law Reform," in which he suggested, for the consideration of the Society of Arts, whether it is not fitting, at a time when Patent Law reform is being officially taken in hand, that the principles upon which this terrible jurisdiction to grant injunctions ought to be administered should be carefully considered by the Legislature and accurately defined by the authority of Parliament itself.

## CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

**ARTHUR L. GIBSON & COMPANY,**

19, 20 & 21 TOWER STREET, UPPER SAINT MARTIN'S LANE, LONDON, W.C.

Sir Joseph Lawrence, after thanking the author for his excellent paper, said the chairman had dwelt upon the drawbacks the judges were under in interpreting Acts of Parliament passed by the Legislature without their having had anything to do with the framing of the Bills in the first instance. The difficulty he experienced in regard to the measure of 1902, which he assisted Mr. Gerald Balfour very considerably in carrying, was that they were legislating on the basis of a report prepared by a departmental committee which largely consisted of lawyers. He felt there was not a man on that committee who was practically and commercially acquainted with the working of patented industries, the result being that the great reform for which the commercial community of the country had been crying aloud for nearly forty years was never touched in the slightest degree; in fact, the present Lord Chief Justice, who was a member of the committee, said when the question was raised, that the committee was not met to discuss the economic question. The terms of reference to the committee were extremely narrow, and excluded the questions which the commercial and manufacturing community desired to be discussed. For nearly thirty years Mr. Levinstein had been agitating on the question at the Associated Chambers of Commerce and Chemical Institutions. He was the man who called attention to the prospective loss of the aniline dye industry, a great question which was not even referred to by the committee. The reformers were told by the lawyers that the matter could not be remedied, and even Mr. Gordon at one time held that view, but he was fast coming round to an opposite opinion. It had now become necessary for the laymen to tell the lawyers of this country what was done by the laws and legislatures of other countries. In this connection he desired, to save time, to quote from an article of his own, which appeared in the October number of the *National Review* as to what was being done in Germany, a country which was going ahead by leaps and bounds. He there said:—"A long series of successful actions for the revocation of patents in Germany, on the ground of non-working, show that the question considered by the Courts is whether the Commonwealth has suffered, or is likely to suffer, by the neglect of the patentee to work his patent in the country. The law keeps the common weal in view in compelling the working of

the patent in Germany. The production must contribute to the advancement of inland commercial industry. The articles protected by the patent must be produced in the country. The patentee cannot excuse himself from the legal obligation to work his patent by the plea that there is no remunerative demand for the patented article. Only *bona fide* efforts to work are of any avail; part of the work being done in Germany will not be regarded as working 'to an adequate extent.' In no case is it admitted that the patentee can delay working till he has a certain prospect of a market to recoup him for his outlay. As recently as April 1904 a patent for stoppered bottles was revoked because, though the bottles had been made in Germany, the aluminium stoppers had been imported. One of the reasons given by the German Court is noteworthy:—"Because aluminium is cheap in Germany, German industry as such has an interest in the patent being worked in this country." He quoted in the House of Commons the celebrated case of Gruson, of Magdeburg, who held a patent for armoured trains in France. The French officials contended that the two years within which he ought to have manufactured in that country under his patent had expired. The patentee replied that there was only one customer for armoured trains in France—the Government; that he offered the patent to the Government who, after considering it for eighteen months, declined it. Nevertheless, the French patent office confiscated the patent. It was untrue, historically and in fact, to say that compulsory working was not enforced on the Continent. It was enforced to such an extent that it was a colossal disadvantage to English industry. Five years ago Mr. Levinstein and himself headed a powerful deputation from various chambers of commerce, representative of all shades of political opinion, to the then President of the Board of Trade with the object of amending the Bill of 1902, which was framed on the recommendation of lawyers, and he then stated that the Bill was an instance of the way in which English commercial industries were menaced by the present patent laws. The whole system of English patent laws had been overlaid by the subtleties of the law. He had a high appreciation of Mr. Gordon's enormous learning on the question of patents, because no man had devoted himself to the question with a higher sense of duty, singleness

of purpose and a profounder desire to remedy the present evils than Mr. Gordon had done; and if the author did not see absolutely eye to eye with Mr. Levinstein and himself, yet he had a strong eye for justice, and was gradually beginning to realise that they were not such fools as they had hitherto been represented to be by lawyers, and that good solid common sense was at the basis of what they were working for. He thought they could take some comfort from the results of their endeavours. For years they had been pegging away in the Associated Chambers of Commerce, with the result that two unanimous resolutions had now been passed recommending the policy which Mr. Levinstein had brought forward, namely, that where a foreigner took out a patent in this country and worked it in his own, he must come here also and work it in order to give employment to English people, which was one of the conditions upon which the original patent rights were granted. That followed a sound good policy, and it furthermore staved off very grave injustices which had been inflicted upon English people in the past. For instance, everybody knew the celebrated case in which Mr. Levinstein sought to get elementary justice by carrying the case to the highest court and failed. People in Germany took out patents for manufacturing dye stuffs which vitally hit Mr. Levinstein's business; Mr. Levinstein unsuccessfully endeavoured to obtain a compulsory license, with the result that the German manufacturers seriously interfered with the trade of every chemical manufacturer in this country. Mr. Gordon set out very strongly the evils of patentees owning the control and profits, but suggested no remedy, only recommending very warmly a very pet view of his, namely, some restriction being placed on the power of judges to grant injunctions. He did not think that people engaged in manufacture in this country were particularly anxious about that, and there had been no pronouncement upon the part of any of the public bodies of this country in favour of limiting that power. He knew of a recent case where the exercise of that power by the judges had a just and wholesome effect. Some foreigners came over to England and introduced an industry which was a gross infringement of an existing patent, and if they had been allowed to go on the manufacturer whose business was prejudiced would not have had a bawbee left by the time he had taken all the

necessary legal steps through the courts up to the House of Lords. In such a case it was a very wholesome power to keep unrestricted, and he thought the judges might be trusted to exercise a very fair discretion, because they were men animated by a high sense of justice and fair play. He would do nothing to restrict that power; in any case he would not lessen their powers of discretion. He frankly admitted that the Act of 1902 was a dead letter. They asked for the power of compulsory working, but were not granted it, the bugbear of the Convention being thrown in their faces. They were not asked as a body to give evidence before the departmental committee, and consequently their views were not known. On the occasion of the last deputation to the Board of Trade, he told the President that he did not desire to place any disability upon any foreign patentee which he, as an Englishman, was not prepared to submit to. Mr. Lloyd George at once said that that was the only point that had hitherto divided them, and agreed that they had absolutely made out their case, and, on a subsequent occasion, informed them that he intended to bring in a Bill on the lines the deputation recommended. There was, therefore, a prospect of what they had been fighting for for so many years being realised before long, and he trusted they would have the loyal help and support of Mr. Gordon in the framing of the measure which would be brought before Parliament. A Bill had already been drafted and laid before the President of the Board of Trade which, he believed, would meet with the unanimous support of all parties in the House, of all the commercial and manufacturing community, and last, but not least, of the legal powers of the country. The difficulty he experienced in the House of Commons was that, whilst he had certain able patent counsel on one side supporting the commercial interests, there were other lawyers on the other side who were frightened to death to do anything to disturb the Ark of the Covenant. He told them it would have to be done, and by dint of hard work he thought they were in a fair way of getting it accomplished.

The Chairman announced that, owing to the number of gentlemen who were desirous of speaking, it had been decided to adjourn the discussion to Wednesday, January 16, the first evening meeting after the Christmas recess.

**NEW LIVERPOOL COTTON EXCHANGE.**

THE new Cotton Exchange stands on an island site of more than an acre in area, having streets on all four sides. The main façade fronts Old Hall Street, and is carried out in Portland stone. The style of the architecture is Classic, the Doric order being used in the lower portico and the Ionic order in the upper colonnade, which masks the roof of the great hall and connects the towers which flank the building. The towers are enriched with sculptured figures at the angles, symbolical of the Arts, Science, Industry, Commerce, &c. The two crowning figures represent the river Mersey and the Ocean. The elevation toward Edmund Street is carried out in steel encased in ornamental cast-iron. This form of construction was devised by the architects to meet the requirements of the cotton trade, in which a maximum amount of light with a minimum of obstruction is necessary, so that the quality of the cotton may be accurately judged. The Bixteth Street façade is faced with Portland stone, and the elevation to Ormond Street with grey sand-faced and white glazed bricks. There are entrances on all four sides, with contiguous spacious staircases, and twelve electric lifts, three of which are reserved for messengers and cotton samples.

The principal feature of the interior is the main hall or exchange, and the attention of the visitors on entering is at once drawn to the monolithic royal pearl granite columns, which are not merely ornamental, but form an integral part of the structure as supports. There are seventy-four of these monoliths, which were quarried in Norway, shipped to Aberdeen, where they were turned and polished, and then shipped to Liverpool. It is interesting to note that nearly 200 stones were quarried before the requisite number of perfect ones could be obtained. The ground-floor columns are of the Doric order, and those of the gallery of the Ionic. The caps and bases are of Bleu Belge marble, and the balustrades of Greek Cippolino and Verde Antico. The moulded architraves of the door openings and the entrance porches are in Italian Mazzano cream-coloured marble, which makes an excellent harmony with the Portland stone. The entablatures and cornices are executed in the finest Portland stone from the base bed. The walls are panelled

in Spanish mahogany, finished with a richly-carved cornice, and above that the walls are finished in French plaster, which is also used for the large ornamental ceiling over the central area. The floor is laid with Australian Jarrah wood blocks, keyed together and bedded in an asphalt composition. The surrounding steps are in French Eschailon stone, which was adopted on account of its non-slippery surface. The floors of the colonnades are laid with rubber flooring in 2 feet 6 inch squares with black diamonds at the intersections. This flooring gives a fine architectural appearance and is absolutely noiseless. The angle fireplaces are important features, and are executed in Mazzano, and the grates are fine specimens of the smith's art. On the backs will be observed a bull and a bear, symbolising the varying strife in the rise and fall of the value of cotton. The dimensions of this large hall are 140 feet long by 165 feet wide. The side wings are occupied by telephone boxes, post, telegraph and cable offices, so that no time shall be lost in the transaction of business. A system of tape machines is also installed, every office having its instrument or ticker which will record the prices as they are marked on the quotation boards. Synchronised electric clocks are fitted throughout the building.

Beyond the hall are the members' smoke and reading-rooms, handsomely panelled in Italian walnut, with a polished oak floor. From the gallery access is gained to the ante-room, board-room, secretary's room and committee-room. The board-room is panelled to the ceiling in wainscot oak. It has a mantelpiece in Mazzano and richly ornamented plaster ceiling. The board-room table and other furnishings are to be in dark polished walnut. The clearing-house and bank are important departments of the Association's business. They are situated on the first floor next Ormond Street, and are completely fitted up for the work to be carried on there.

On the sixth floor are placed the arbitration and appeal rooms, with a north-east light, where all disputed bargains and contracts are settled by experts without recourse to the delays and uncertainties of the law.

The remainder of the various floors is occupied by suites of cotton offices and sale-rooms, and their rentals pay

a handsome return on the capital expended on the undertaking, which, including land, will not fall far short of 350,000/.

The building is lighted throughout by electricity, and the large hall alone will be lighted by some 500 lamps placed on the main cornice, the light being reflected from the ceiling, whereby a more pleasing effect is produced than by the ordinary point lighting. The ventilation has received especial attention. The fresh air is brought in, is filtered and washed, and passed over heating coils in winter and propelled into the large hall by powerful electrically driven fans. The fresh air, which is cool in summer and warm in winter, is concentrated at the Cotton Ring or Pit, where the crowd of traders congregate. The exhausted air is drawn away through the perforated risers in the steps of the Pit and through openings, and is expelled by a 20-horsepower fan up the main shaft above the roofs. Fireproof construction is used throughout the building, and fire mains and hydrants are placed in several positions on each floor. Postal facilities are also arranged for on each floor, with a letter shoot into a letter-box on the ground floor.

The buildings have been designed by Messrs. Matear & Simon, the Waring-White Building Company, Ltd., of London, being the general contractors. It is interesting to note that the work has been carried out in the short period of seventeen months, well within the stipulated period.

The heating and ventilating has been carried out by Messrs. Ashwell & Nesbit, Ltd., of Leicester, under the supervision of their engineer, Mr. Lund. The Northern Electrical and Ventilating Company of Liverpool have carried out the electric lighting, under the supervision of the consulting electrical engineer, Mr. Alfred H. Gibbings, M.I.E.E.

Messrs. Waring & Gillow, Ltd., of Bold Street, Liverpool, have executed the wall panellings and the ornamental joinery in a first-class manner. Messrs. A. & F. Manuelle, of London, are responsible for the granite columns and marblework, the balustrades and mantelpieces being executed by Messrs. Emley & Son, Newcastle-on-Tyne.

The constructional steelwork was in the hands of Messrs. Edward Wood & Co., Ltd., of Manchester, and throughout was of a high quality and expeditiously carried out from the detail drawings, and under the super-

intendence of Mr. Henry S. Woodhouse, C.E., of Liverpool. The same must also be said of the work of Messrs. Walter Macfarlane & Co., of Glasgow, who executed the ornamental cast-iron work of the Edmund Street and internal façades.

The Fram Fireproof Flooring Company executed the fireproof floors. The figure and decorative sculpture has been ably executed by Mr. Birnie Rhind, R.S.A., of Edinburgh, and Mr. E. O. Griffith, of Liverpool. The ornamental plasterwork was in the hands of Messrs. Henry Johnson & Sons, of Primrose Hill, Liverpool, the modelling being done in their shops by Mr. Stenborn.

The wrought-iron work of the lift enclosures, the large ornamental ceiling of the Exchange Hall, and the lead-light glazings throughout were executed by Messrs. George Wragge, Ltd., of Salford. Mr. Joseph Ebner and the Acme Wood Block Flooring Company laid the wood-block floors. The terrazzo floors were executed by Messrs. Diespeker, Ltd., of London, and the wall tiling by Mr. G. Swift, of Liverpool, also Messrs. Martin Van Straaten and Messrs. Doulton & Co., of London. The latter firm are also responsible for the sanitary fittings.

The lifts have been executed by the Easton Lift Company, of London, and the metal casements by Messrs. Henry Hope & Sons, of Birmingham.

The rubber flooring of the colonnade was executed by Messrs. George MacLellan, of Glasgow, under the supervision of Mr. R. H. M. Taylor.

The furnishings of the smoke and reading-rooms are being supplied by Messrs. Maple & Co., of London, and Messrs. Waring & Gillow, Ltd., are supplying those for the board-room.

The bank and clearing-house, as well as the arbitration and appeal rooms, were fitted up by Messrs. W. A. Peters & Son, of Rochdale.

Messrs. Ockleston & Drayton, of Liverpool, have executed the iron sliding gates which enclose the portico at night.

The tickers and electric clocks have been installed by the Private Wire and Telephone Installation Company, of London, and the telephone installation has been in the hands of the Telephone Company.

Messrs. Hurrell & Taylor, of 6 Stanley Street, Liverpool, were the quantity surveyors.

**WATER SUPPLY.**

At the ordinary meeting of the Institute of Civil Engineers on the 27th ult., Sir Alexander Kennedy, LL.D., F.R.S., president, in the chair, three papers were read, namely, "The Talla Water Supply of the Edinburgh and District Waterworks," by W. A. P. Tait; "Repairing a Limestone Concrete Aqueduct," by M. R. Barnett; and "The Yield of Catchment Areas," by E. P. Hill. The following are abstracts of the papers:—

The first paper deals with the new supply lately introduced from Talla, one of the head waters of the river Tweed, and occasion is taken to review shortly the other proposed sources of supply which for a time were under consideration. Attention is directed to the results of borings and trial pits at other sites which were considered, viz. St. Mary's Loch and the Manor Valley. A statement is given of the population and water consumed for domestic and trade purposes in 1870 and at the present date.

Attention is directed to various points in the Act authorising the construction of the Talla works. For instance, there was some diversity of opinion as to the available rainfall. The steps taken to appoint arbitrators to determine this and the subsequent amount of compensation-water are dealt with. The basis upon which the arbitrators proceeded in considering and issuing their award is fully placed before the Institution, and it is also mentioned that the Water Trustees, though only bound by their Act to have rain-gauges read during a period of seven years, have adopted a suggestion made to them by the arbitrators, that the readings of these gauges should be continued. The author points out that it might have been more satisfactory if the clause appointing the arbitrators had provided for regular readings of gauges on the stream as well as ordinary rain-gauges, and the paper goes on to refer to a series of observations which have been made during the filling of the reservoir with a view to determine the relationship between actual and available rainfall on this drainage area.

The opposition by the River Tweed Commissioners and

the proceedings in the subsequent arbitration with them are also noticed, and the award by the umpire is stated.

The general features of the valley in which the Talla reservoir is placed are described, and some drawbacks to Talla as a really good reservoir site, including the total absence of suitable clay for puddle and of good building stone, are referred to. A general description is given of a railway ten miles in length, which was constructed to the reservoir from the nearest point on the Caledonian Railway, for bringing up clay, building materials, &c.

The general design of the reservoir embankment and puddle trench is described and changes in the design which were brought about by various causes are referred to. Mention is also made of the timely discovery that water was escaping outside the lining of the outlet tunnel from the reservoir. The probable cause of this and the method of preventing subsequent leakage are dealt with.

Particulars are given of the outlet works and of the gun-metal valves which were adopted.

A general description of the aqueduct is given and various troubles encountered in its construction are related. The method of timbering adopted in some of the soft tunnels is described. For one of the tunnels recourse was had to compressed air without a shield and the process of driving and the plant used are described.

The paper concludes with a statement of the cost of the work and also statistics of the Edinburgh and District Water Trust's rating and revenue.

To it are appended tables of the rainfall on the Tulla drainage area for ten years and also a series of gaugings of springs extending over forty-three years.

The second paper describes the work of repairing a short length of the Thirlmere aqueduct which conveys water from Thirlmere, in the Lake district, to Manchester.

The aqueduct, which is nearly 96 miles in length, was completed and brought into use in October, 1894. After the water had been flowing through the aqueduct for a number of years, it was found that the full quantity of water was not being received at Manchester, and one of the causes was that considerable leakage was taking place in the concrete culvert portion of the aqueduct at Hutton Roof—a length of nearly 3 miles. For several years repairs were carried out in this length, but these did not stop the leakage, as it was

ENGINEERS & IRONFOUNDERS,  
**Crossbank St., Oldham.**

Telegraphic Address: "IRONFOUNDERS, OLDHAM."  
National Telephone: 161 OLDHAM.

found that the same began at new places. The author, who had been resident engineer in the same district during the original construction of the Thirlmere aqueduct, and had returned in connection with the laying of a second line of pipes, was requested to investigate this matter and carry out the necessary repairs.

The first work done was to re-test the length in question in order to locate the leakage. This was done by fixing timber stanks across the culvert at the manholes. These stanks were made with a rectangular opening, large enough to pass the water through to Manchester, but which could be closed with a wooden door during the tests. The main divisions were further subdivided into 4-chain lengths and tested. The tests proved that there was a total loss of over 1,250,000 gallons of water in twenty-four hours when the aqueduct was running full, and also indicated where the leakage was occurring and its relative extent in several sections.

The work of repairing was started in the section at the north end, where the leakage was found to be greatest. On making an examination of the concrete in this length, the author found that the cause of the leakage was due to the action of the soft water from Thirlmere on the limestone in the concrete of which the Hutton Roof section had been built. Holes were found in the floor of the culvert by which the water was escaping, and all the small individual pieces of limestone were found to be much water-worn.

Analyses of the water in the Thirlmere aqueduct are given.

The author made experiments to ascertain the rate of the action of the soft water on blocks of the limestone, and the Portland cement and mortar (one of cement to one of sand) used for the repairs, were similarly tested. Chemical analyses were made of the limestone from which each of the blocks was prepared, as well as of the Portland cement and the sand, and the results of these tests and analyses are given.

After three months' immersion the rate of wastage of the blocks varied from 6.83 per cent. per annum to 18.10 per cent. per annum, and after six months' immersion from 6.75 per cent. per annum to 17.09 per cent. per annum. The sample blocks of Portland cement and mortar, instead of losing, actually gained slightly in weight, namely, the

cement block 5.47 per cent. per annum and the mortar block 3.57 per cent. per annum.

It was decided that the whole water surface of the concrete in which limestone had been used should be refaced with Portland cement mortar not less than 1 inch in thickness. The methods adopted in removing the necessary thickness from the old concrete and in applying the new mortar facing are described in detail. The mortar was put in between timber framework fixed so as to give the correct thickness and maintain the original dimensions of the culvert. The surface of the invert was hacked off and replastered after the side walls had been done.

A description is given of various special circumstances arising during the execution of the repairs, and of the nature of the various holes, &c., met with. Although the removal of the surface of the concrete in the culvert was a very searching test, the whole of the concrete in the Hutton roof section of the aqueduct was found to be excellent in quality, as far as the workmanship was concerned, and could not be improved upon in this respect.

The way in which the outside water was dealt with is described. In all cases free vent was given to the water by the insertion of pipes of suitable diameter, and these were carried up the side walls to above top water-level.

The author of the third paper points out the deficiency of data for computing the yield of drainage-areas for waterworks purposes, and the necessity for such data in utilising the areas in the most economical manner, having in view the few suitable areas yet remaining unappropriated.

Reference is made to the difficulties encountered in making stream gaugings on a large scale and recording the observations continuously.

The present method of estimating the yield by rainfall observations combined with assumptions as to loss by evaporation and rate of flow in the streams, is next described.

Finally, the author urges the necessity for every waterworks being utilised as an experimental station, and for water authorities keeping an account of water received and expended, like a banking account, as a condition of their being allowed to appropriate a portion of the national sources of water supply.

# THE "DRAWWELL" GRATE

WAS PLACED

## First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

**RAPID TRAVEL IN LUXURY.**

Each Express is VESTIBULED and has a BUFFET CAR attached available for FIRST and THIRD-CLASS PASSENGERS.

The London Express Trains centre on Sheffield, branching therefrom westward to Manchester, Oldham, Stalybridge, Stockport, Warrington and Liverpool; northward to Huddersfield, Halifax, Bradford, Leeds and York; eastward to Doncaster, Grimsby, Hull and North Lincolnshire.

Cross Country Expresses and Through Arrangements with other Companies are a distinct feature of the Great Central services. Liverpool, Manchester, and Sheffield are linked up by corridor trains with Lincoln, Harwich, Lowestoft, Norwich, and the Great Eastern system. Newcastle, Sunderland, Durham, York, Bradford, Huddersfield, Rotherham and Sheffield are provided with through trains via Nottingham, Leicester, Banbury and Oxford, to and from Southampton, Bournemouth and the South-Western Line.

Bath, Bristol, Exeter, Torquay, Kingswear, Plymouth, and the Cornish Riviera are reached by Express Trains from Leeds, Wakefield, Halifax, Huddersfield, Sheffield, Nottingham, and Leicester.

TICKETS are issued in advance at all offices, or by Messrs. Dean & Dawson, the Company's Agents, who also book to the Continent by any Channel service in connection with the Rundreise or Tourist system, which affords travellers choice of route and a reduction of about 30 per cent. off ordinary fares.

# The ARCHITECT and CONTRACT REPORTER.

*New Year's Special Issue.* 77th Volume.

6 to 11 IMPERIAL BUILDINGS,

LUDGATE CIRCUS, LONDON, E.C.

December 1906.

Dear Sir,—On Friday, January 4th next, TWENTY THOUSAND (20,000) COPIES of "THE ARCHITECT AND CONTRACT REPORTER" will be sent to ARCHITECTS, BUILDERS, and CONTRACTORS throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"THE ARCHITECT" is, in its Advertisement Columns, the most reliable reference for all who are engaged in Building Operations, and is acknowledged to be the best medium for Advertisers. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than one-fourth the cost of sending 20,000 Circulars by post, and it is well known that Circulars are frequently thrown into the waste basket unread. Our New Year's Double Number always contains beautiful illustrations and valuable letterpress, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that if you wish to secure space for an Advertisement, we shall be much obliged if you will communicate with us without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir, yours faithfully,

GILBERT WOOD &amp; CO., LIMITED.

WOLVERHAMPTON.

### AUTOMATIC FLOOD TRAP

Murray's Patent, No. 23260.

Showing the Gully sealed.

THIS GULLY TRAP provides means whereby, in the event of a sudden back flush of water in the drains, the Gully is automatically sealed from the interior and the water in the drains prevented from escaping through the inlet of the Gully.

#### ADVANTAGES.

Gully can be fixed without touching the drains. The working parts are very simple and cannot get out of order. The Gully can be cleaned out without moving anything. The working parts are made of noncorrosive metal. The trap is self-acting.

## H. & C. Wrought Steel "LOUVRE" VENTILATORS.

MADE IN 130 SIZES.

From 4 x 6 to 24 x 42.

Black Japanned,

White Japanned,

Nickel Plated,

Bronze Plated,

ALSO IN

Solid Wrought Brass

AND

Bronze Metal.

ELEGANCE. LOW PRICE. NO BREAKAGE.  
SPECIFIED BY ARCHITECTS.Each Ventilator is packed in a separate cardboard box,  
and is furnished with one brass pulley (no cord or tassels).

These Ventilators being made entirely of **Wrought Steel**, breakage either in transportation, in stock or in use, is practically impossible.  
They are light in weight, with a consequent **Saving in Carriage**.  
The Operating Slide is made of very heavy gauge steel, and is especially **strong** to insure against breakage and guaranteeing a free and positive operation.

Each Ventilator is packed in a separate cardboard box, and is furnished with one brass Pulley (no cord or tassels).

Sold by all First-class Builders' Merchants.

WM. E. PECK &amp; CO. (Inc.), 8 Bradford Avenue, London, E.C.

**TRADE NOTES.**

A LARGE clock with four dials has been fixed in the turret of the buildings known as Spondon pumping station, Derbyshire, by John Smith & Sons, Midland Clock Works, Derby.

A NEW clock, striking the hours and showing time upon one dial, is to be erected in the tower of Staunton-on-Arrow Church, Herefordshire. The work has been entrusted to Messrs. J. B. Joyce & Co., Whitchurch, Salop, who are also making a large clock for the Royal Enfield Cycle Company, Redditch.

**AMALGAMATION OF CRANE MAKERS.**—Arrangements have been completed for the amalgamation of the firms of Jessop & Appleby Brothers (Leicester and London), Ltd., and the Glasgow Electric Crane and Hoist Company, Ltd., under the style of "Applebys, Ltd.," as makers of giant cranes, shipbuilding berth equipments, lifting appliances of all types and powers, &c., with head offices at 56 Victoria Street, S.W.

MR. H. S. DICKINSON, of 42 Union Street, Bradford, has just introduced a new and economical composition known as "Leadite," which is claimed to make the strongest jointing material for water mains, gas mains, sewer and soil pipes in the market. It requires no caulking, saving thereby labour, and as it is not affected by oxidation or by extremes of heat and cold, it is absolutely efficient.

A BLUE-BOOK has been issued containing illustrations of methods of dust extraction in factories and workshops, compiled by Commander Sir Hamilton P. Freer Smith, R.N. (late H.M. Superintending Inspector of Factories). While great advances have been made in the direction of exhaust ventilation of factories, it is often found that owing to misapprehension of the conditions of the problem ineffective installations have been provided at considerable cost, and in view of this it has been thought advisable to bring together for the information of manufacturers a number of examples of well-planned installations which in practice have secured the desired results.

"M.L.T." is a new material for the purpose of erecting partitions. Metal Ladder Tape is the name of this the latest invention for this purpose. It is produced by diagonally splitting strips of steel at intervals somewhat short of either edge, and it is supplied in this way in coils; the lengths are secured at top and bottom by staples, with the

cross-pieces at right angles to the face of the partition. When fixed a ladder formation is the result, forming a first-rate key for the plaster. We give an illustration which will show some idea of the system. The address of the Metal Ladder Tape Co. is 84 Newhall Street, Birmingham.

An "International Exhibition of Balneation and of Bathing Resort Life" will take place next year in Spa under the patronage of H.R.H. Princess Clementine of Belgium. The programme of the exhibition includes balneology, hygiene, medicine and chemistry, architecture, furniture and its accessories, the decorative and graphic arts, electricity, styles, alimentation, locomotion, sport and play, association and publicity.

**ELECTRIC NOTES.**

THE Caledonian Railway Company have decided upon the installation of electro-pneumatic power for working the railway signals and points at their new central station at Glasgow. All the traffic will be worked from one cabin, with no fewer than 347 levers. The Westinghouse electric pneumatic signals will be used, and it will be by far the largest interlocking signalling plant.

At an inquiry into the explosion near Pontypridd whereby six men lost their lives three weeks ago, in accordance with the theory propounded by the management and inspectors of mines, the jury returned a verdict that the explosion was caused by the emission of sparks from the electric battery used for lighting colliers' lamps in the mine, but that no fault or neglect could be attached to any person concerned.

THE electricity committee of the Manchester Corporation received a deputation which attended from the Failsworth District Council with a request that the committee will put in use the powers (which by an arrangement with the District Council they now possess) for supplying Failsworth with electric current for lighting and power purposes. Hitherto it has seemed to the committee that the demand for the electric light in the district was so small that serious loss would attend the grant of the request, but after hearing what the deputation had to say it was agreed on both sides that a special effort should at once be made to ascertain the wishes of the inhabitants of the district, and if the result of the canvass gives promise of a fair return on the capital outlay the committee will be pleased to comply with the District Council's wishes.

**BUILDING AND BUILDERS.**

THE Institute of Builders will visit St. Paul's Cathedral on Monday, December 10, at 2.30 P.M.

THE London Master Builders' Association Council meet on Thursday, the 13th inst., at 4 P.M.

THE Rochford (Essex) Guardians have passed plans for the enlargement of the workhouse at an approximate cost of 10,000*l.*

Two cases under the Factories and Workshops Act came before Sheriff Gardner Millar on Friday last in Edinburgh Sheriff Court. James Millar & Son, builders, Edinburgh, were charged with failure to report to H.M. Inspector of Factories in charge of the Edinburgh division an accident which proved fatal to James Gaffney, labourer, who was injured at the building in course of construction at the corner of St. Andrew Street and Princes Street on October 15. The firm pleaded ignorance of the Act, but the Inspector pointed out the action taken by the Home Office to make these provisions known, and the Sheriff imposed a penalty of 3*l.*, including expenses.

THE Bath Master Builders' Association had a special meeting last Friday to consider the new rules proposed by the men governing working conditions, hours, wages, &c., which were summarised at the meeting. It appears that the general advance movement has arisen out of a proposal to readjust the working hours of the winter months so that more advantage might be taken of the hours of daylight. The proposals of the men tend, speaking generally, to place the Bath building trade under the same rules as govern the Bristol operatives, and have not been at all favourably received by the master builders, whose inclinations run rather in the direction of less wages than of more. The Association has appointed a sub-committee to go into the matter and report.

**VARIETIES.**

It is proposed to erect a new wing to the Yorkshire Institution for the Deaf and Dumb at Doncaster, for which plans are being prepared for the approval of the Board of Education by Mr. E. H. Ballan, M.S.A., Doncaster.

THE Bremen Senate has put a motion before the Common Council for the building of a new industrial harbour at Oslebshausen, between Bremen and the mouth of the river Weser, at an estimated cost of 20,000,000 marks.

THE Salford Union Guardians have agreed, subject to the sanction of the Local Government Board, to purchase the site in Irwell Place and the Crescent, containing 1,802 square yards, for 2,300*l.* for the purpose of providing new offices.

BUSINESS PREMISES, 353 OXFORD STREET, W.

A GRANITE monument has been completed in Aberdeen for shipment to Invercargill, New Zealand, where it is to be erected by the municipality in memory of the colonial troopers who fell in the South African War. The cost of the monument is about 2,000*l*.

THE engineers to the water committee of the Birmingham Corporation have issued their final certificate for Contract 12 for construction of the aqueduct from Cleobury to Hagley, amounting to 456,111*l*. 11*s*. 8*d*. The amount provided for the contract in the ultimate estimate was 455,731*l*. 17*s*. 6*d*., so that the completed work exceeds the provision by 379*l*. 14*s*. 2*d*., or .08 per cent.

THE Pennsylvania Railroad Company has called for bids for the construction of 100 all-steel non-inflammable passenger-cars. This will be the first lot of such equipment to be made in accordance with the company's intention to build no more wooden cars. The Pullman Company, at the instance of the Pennsylvania Railroad, is at work upon an all-steel non-inflammable sleeping car.

THE finance committee of the Kensington Borough Council have submitted a statement showing an increase in the number of empty houses in the borough, due, it is said, to the annoyance caused by the motor omnibus and other heavy motor traffic. The loss to the rates during the past half-year in consequence has been 25,245*l*., or 49,000*l*. for the twelve months. A petition from residents against the

present motor omnibus traffic was referred to the law committee for consideration.

MR. GUENTHER, the American Consul-General at Frankfurt, in a report to the Washington Bureau of Manufactures, says that "alzen" is the name given to a new metal, composed of two parts of aluminium and one part of zinc, and which is said to equal cast-iron in strength, but is much more elastic. Alzen is superior because it does not rust as easily as does iron, and it takes a high polish. Besides being very strong this new metal is capable of filling out most delicate lines and figures of forms in casting.

THE borough engineer of Camberwell has presented a report to his Council respecting the price paid by them for some land in Addington Square, off Camberwell New Road. In 1902 10,170*l*. was raised for the purchase of the Council's original depot, which worked out at 13,181*l*. an acre. But later the Council resolved to acquire additional space, and this time 15,478*l*. was paid, or at the rate of 32,182*l*. per acre. Since the purchase the land has not been used, and a board announces that it is to let.

THE Coventry City Council on Tuesday agreed upon the expediency of promoting a bill authorising the Coventry Corporation and the Birmingham Corporation to enter into and carry into effect agreements for the supply by the Birmingham Corporation of water to the Coventry Corporation, and to empower the Coventry Corporation to lay mains and carry out waterworks; to authorise the Coventry Corporation to borrow money for the purpose; and to confer on the Coventry Corporation further powers with regard to their water undertaking.

THE waterworks committee of the Manchester Corporation have completed arrangements with Messrs. G. H. Hill & Sons, waterworks engineers, for the construction of the third conduit from Thirlmere. The work will be begun as soon as possible. Messrs. Hill were the engineers of the two pipes already laid between Manchester and Thirlmere. The committee also decided to appeal against the increased assessment of the rateable value of the work at Thirlmere made by the assessment committee of the Cockermouth Council consequent on the raising of the level of the lake for supplying the new pipe. The increase—from 4,450*l*. to 8,500*l*.—was considered wholly unreasonable.

2 & 3 NORFOLK STREET, STRAND, W.C.

THE Local Government Board has given its sanction to the raising of a loan of 18,000*l.* by the Bournemouth Town Council for the purpose of constructing the proposed new Undercliff Drive. This work, when completed, will not only form a handsome new promenade, but will also serve to preserve and protect the cliff, for which purpose it has been designed, between Bournemouth Pier and Meyrick Road. The new drive will be about 850 yards long, and forms part of a scheme for linking Bournemouth and its neighbour Boscombe by a new carriage-way, estimated to cost altogether 60,000*l.*

THE Lincoln City Council have adopted the report of the waterworks committee, which recommended that a water tower capable of holding 300,000 gallons be constructed at an estimated cost of 7,000*l.*, that the present reservoir on the cross of Cliff Hill be abandoned, that a new covered reservoir capable of holding 6,000,000 gallons be constructed at the summit of the cross of Cliff Hill at a cost of 26,500*l.*, and that the Council provide an additional rising main or mains and a supply main from the proposed reservoir to High Street, South Bar; also that the waterworks engineer's salary be increased to 400*l.* per year.

In the King's Bench Division, before Mr. Justice Bucknill and a common jury, a woman was awarded 100*l.* damages for personal injuries against a furniture dealer, of Westbourne Grove, London. Plaintiff visited defendant's shop for the purpose of making purchases, and whilst she was there a portion of the cornice under the parapet of the house fell, breaking the skylight in the roof, killing the shop assistant and injuring plaintiff, her companion and others. Plaintiff's case was that the defendant had neglected to take reasonable care to secure the safety of his establishment in the interest of his customers, and defendant, on the other hand, attributed the accident to a heavy gale which, he said, was blowing at the time.

THE International Society of Building Commissioners and Inspectors, U.S.A., at a recent meeting stated that there are 11,500,000 buildings in the United States valued at 14,500,000,000*l.*, and only one of the buildings—that of the Underwriters' Laboratories in Chicago—is absolutely fireproof. It was declared that such absolute fireproofing cost only 12 per cent. more than ordinary building con-

struction would. If a building is absolutely fireproof, fire insurance is dispensed with, but as so-called fireproofing is but a reduction of annual fire hazard, the question arises if a building cost 12,000*l.* for ordinary construction, and only 13,440*l.* when "fireproofed," what is the difference between insurance cost and annual interest cost at say 4 per cent.?

THE longest concrete arch yet undertaken anywhere is that of the main span of the Walnut Lane bridge in Philadelphia, which also has the third place in the list of long-span arches of all classes of masonry. The structure, which is now in process of construction, consists of one main arch having a clear span of 233 feet with a rise of 73 feet, and five other arches each having a clear span of 53 feet. The total length of the bridge is 585 feet. The bridge is designed for highway traffic and carries a 60-foot street at a height of 147 feet above the creek. The five approach arches are all semicircular in form, and each has two ribs or rings resting on twin shaft piers. Their general design conforms closely to that of the main arch.

THE Chief Registrar of Friendly Societies in his annual report gives figures regarding the work being carried on by various schemes under the Workmen's Compensation Act. Various schemes, differing in character, had on June 30, 1905, been adopted by 100,215 workmen, who contributed during the year 35,221*l.* The employers contributed 51,252*l.* The payment on death was 15,422*l.*; during incapacity, 50,472*l.*, of which 17,727*l.* was paid for the first two weeks of incapacity for all cases, 27,686*l.* after the first two weeks, and 5,059*l.* in lump sum payments; for other benefits, 11,646*l.* The funds were 185,570*l.* The number of deaths eighty-seven, in sixty-six of which 128 dependents, comprising fifty-two widows, sixty-two children and fourteen parents, were left. The number of cases of incapacity, 16,147. The average contribution of each workman, 7*s.*

MR. WEDGWOOD, M.P., on Tuesday in the House of Commons asked the President of the Board of Trade whether he was aware of the dissatisfaction existing among the British exhibitors at the Milan Exhibition, especially in the section devoted to applied arts, owing to the bad organisation and arrangements of the British exhibits;

FEW Words About "ETERNIT" SLATES AND TILES, the Modern Roofing Material. Superseding Welsh Slates and Tiles. Our Artificial Slate combines artistic appearance with indestructibility, and therefore represents the most economic, high-class fire, frost, acid, and weather-resisting roofing. We guarantee roofs covered in accordance with our instructions to require no repairs for at least 20 years. As supplied to the Admiralty, War Office, Crown Agents for the Colonies, Board of Works, etc. Colours: Terra Cotta, Granite Grey and Blue. 66½% lighter weight than Bangor Slates, and 60% stronger. ETERNIT SHEETS, 8ft. by 4ft., cheapest and strongest fire-resisting material for lining Walls and Ceilings: Asbestos, with minimum binding matter.

Write for full particulars to G. R. SPEAKER & CO., 29 Mincing Lane, LONDON, E.C. (Telegrams: "Etrasheet"); and at 57 Hope Street, Glasgow, and 33 Victoria Street, Bristol.

## C. A. JONES' — "CAJAC" EXTENSION LADDERS.

(Patent Applied for.)

Registered Trade Mark "CAJAC."

Made in TWO SECTIONS only.  
HARDWOOD TREADS.

STOCKED in EIGHT SIZES up to 30ft. (extended height).

Possess the following advantages over all others.

1. Greater constructional rigidity.
2. No iron clutches.
3. No possibility of catch getting out of order.
4. Catch bound always to take the tread on its underside, along its entire length, thus preventing wearing of treads.

Write for List including our CELEBRATED COMPENSATION-JOINT  
TABLES, HATHERLEY LATTISTEPS (Step Ladders), &c.

THE

### LLANGOLLEN ADVERTISER,

Denbighshire,

Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years, has a very large and influential circulation throughout North Wales. Being conducted entirely on neutral principles, it finds its way into families of all classes. As it is also the only paper printed and published in this district, it offers peculiar advantages to advertisers.

HUGH JONES, Castle Street,  
Proprietor.

**SOUTH WALES DAILY NEWS.**—Prominent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**SOUTH WALES ECHO.**—Eight editions daily. 36 columns, 1d. One of the largest and most attractive evening papers in the province. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together.—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**CARDIFF TIMES** (Weekly, 1d.)—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2d. to a 1d. paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

## "THE ARCHITECT'S DIARY" for 1907.

Specially prepared for the use of ARCHITECTS, SURVEYORS, and ENGINEERS.

These Publications contain not only the usual Diary, ruled and printed to a particular form, specially adapted for professional use, but, in addition, an Index, a Note-Book, a Rent and Insurance Register, a Cash Book, and a Ledger, with all the usual diary information, and much special matter referring to the various Architects' and Engineers' Associations; a digest of all the Acts passed last Session; contain also cases decided in the Superior Courts of Justice during the legal year, from November 1905 to August 1906, of interest to the Profession; Regulations of the London County Council under the orders of the Council applying to Music, Dancing, Theatre, and other Licences; complete List of Metropolitan Surveyors and Districts, with Official and Private Address; Alphabetical Index to the Practical Statutes, Stamp Duties, &c., the whole forming in ONE VOLUME A COMPLETE SET OF BOOKS FOR THE YEAR. The Editions are—  
No. 12.—One page to a day, size 8½ in. by 5 in., cloth, gilt, 4/6. | No. 13.—Two pages a day, size 8½ in. by 5 in., cloth, gilt, 5/6.

## "THE BUILDER'S DIARY" for 1907.

Specially prepared for the use of BUILDERS and CONTRACTORS.

No. 11.—Two days on a page, ruled and printed to a special pattern; also contains Bill Register, Note Book, Rent, Insurance, and Mortgage Register, Cash Book, Ledger and 130 pages of Tables of great value to all engaged in the Building Trade, in all 460 pages, size 8½ by 5, bound, whole cloth, gilt. Indexed, and pagged to end of Diary. Price 4s. 6d.

"For use in the office of Architects and Builders they are better fitted than any diaries with which we are acquainted."—*The Architect*.  
"The novel and valuable feature of these Diaries is that each volume forms in itself a complete set of books for the year."—*The Builder*.  
"We have used them ourselves throughout the year with much satisfaction, and are glad now to draw attention to the new batch sent us."—*The Building News*.  
"Messrs. Hudson & Kearns' Diaries need no recommendation save a trial."—*The British Architect*.  
"The Diaries published by Messrs. Hudson & Kearns are quite unrivalled for convenience and comprehensiveness."—*Building World*.  
"These Diaries may be said to have become the Diaries for the professions for which they are issued."—*Illustrated Carpenter and Builder*.

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL

ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\* \* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. WORCESTER.—Dec. 25.—For the erection of warehouse and offices, for Kays, Ltd. Deposit 2% 2s. Messrs. Simpson & Ayrton, architects, 3 Verulam Buildings, Gray's Inn Road, London, W.C.

THE State of New York is, for the first time in its history, pursuing a systematic plan for the construction, maintenance and repair of the 75,000 miles of highways within its boundaries. First, by extending State aid in the construction of a county and State system of main or market roads equitably apportioned among the counties and covering a distance of 7,500 miles. Of this 692 miles have already been improved, and plans for the improvement of 1,550 miles have been approved by the boards of supervisors, leaving 5,450 miles of additional roads the improvement of which is suggested. Second, by extending State aid to all towns which have substituted for the antiquated system of working out the road tax the more modern and businesslike method of paying same in cash. Five hundred and thirty-three towns, containing 45,005 miles, have adopted this money system, and many of the remaining 399 towns, containing 30,083 miles, are rapidly following their example.

## TENDERS.

## ACCRINGTON.

For the erection of an engine and boiler-house at Altham Bridge. Messrs. HAYWOOD & HARRISON, architects, Accrington.

FIRES caused electrically during the last three months in the United States were seventy-four in number, and resulted in 161,000 dols. loss, according to a report of the National Board of Fire Underwriters. Eight were due to the crossing of high-tension wires with telephone and lighting circuits, nine were due to the grounding of lighting and motor circuits, and thirty-one were due to short circuits on interior wiring.

For alterations and additions, including cast-iron and steel-work, in connection with a warehouse in Bristol, for Mr. S. ILES, under the superintendence of Mr. T. J. MOSS-FLOWER, A.M.Inst.C.E., Carlton Chambers, Bristol, and 28 Victoria Street, Westminster, London.

LOVELL & SON, Bristol \* £4,130 0 0

\* Accepted subject to deductions.

**TRADE NOTES.**

WE are informed that Messrs. Redpath, Brown & Co., Ltd., have secured an order to the value of 3,000l. for the steel framework for a new electric-power station which is being erected by Messrs. D. Davis & Sons, Cardiff, at their Tylorstown colliery.

THE extensions to the infectious diseases hospital, Lincoln, are being warmed and ventilated by means of Shorland's double-fronted patent Manchester stoves with descending smoke flues and exhaust roof ventilators, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

A HANDY little spirit-level is that known as the "Cat's Eye," supplied by Mr. J. R. Wood, of 20 Union Street, Glasgow, in sizes from 1½ inch up to 5 inches, at such a reasonable rate that every builder should possess himself of one.

A NEW steam fire engine by Messrs. Merryweather & Son was tested by the fire brigade, Glasgow, a few days since in boisterous weather. Water was thrown to a height of 140 feet, and afterwards a test was made with a low-pressure supply. The results were satisfactory.

WE have often referred to the care taken by the Yale & Town Co., Ltd., New York, to produce locks and lock furniture which would be adapted to all varieties of styles. The company's metalwork of those classes has been employed throughout the new Liverpool Cotton Exchange, which it will be remembered is Classic in style.

THE vicar (the Rev. Charles L. L. Gwilliam) and inhabitants of Otterburn have given instructions to Messrs. Wm. Potts & Son, clock manufacturers, Newcastle and Leeds, to erect a public clock in the village church, of the very best quality, with all Lord Grimthorpe's improvements inserted, which is now well in hand, and will shortly be fixed in the tower. Otterburn is the village where the celebrated Border fray occurred, as depicted in the ancient ballad of "Chevy Chase," some centuries ago.

**NEW DIARIES.**

No architect or builder who desires to be up to date should be without the diaries issued by Messrs. Hudson & Kearns, which are replete with information and are produced in such excellent style. This firm also supply the best blotting pads we have yet had brought to our notice. The one numbered 8A is possibly the most useful, although "The Banker's" may run it very closely for popularity; each pad consists of blotting-pad, diary and date remembrancer. The one known as 8A has, in addition, ample provision for standing memos; the blotting-paper is of the best quality, and the whole is so admirably produced that it is an ornament, whether for the studio, office or board-room table.

**NEW CATALOGUE.**

WE have received from Messrs. Barford & Perkins, engineers, Peterborough, a copy of their admirable new illustrated catalogue of steam cooking, heating and laundry appliances, which are specially adapted for the requirements of workhouses, asylums, schools, hotels, messrooms, &c. Among the numerous advantages claimed for Barford & Perkins's system is economy, inasmuch as one fire only is required for the complete system of cooking all kinds of food, heating by steam all parts of the institution, supplying hot water to baths, driving laundry and pumping machinery, drying clothes, &c.

**ELECTRIC NOTES.**

MR. ROLES has been offered the appointment of electrical engineer and manager to the Bradford Corporation, in succession to Mr. Blackman, who has accepted the appointment at Sunderland.

MR. P. C. COWAN, M.Inst.C.E., chief engineering inspector, Local Government Board, held an inquiry in the town hall, Ballsbridge, Ireland, into an application by the Pembroke Urban Council for a loan of 6,500*l.* for the proposed extension of the electric-lighting scheme in the Pembroke township.

THE Aston Town Council have agreed that the town clerk be authorised to make application to the Local Government Board for sanction to the borrowing of the sum of 7,000*l.* to defray the expenditure incurred in the laying of feeder cables and works incidental thereto in connection with the supply of electrical energy for tramway purposes in Erdington. The demand for lighting and power was still showing a very marked upward tendency.

THE Wolverhampton electricity committee report that certain generators and transformers which formed part of the old high-tension system are now out of date, and it is recommended that they be disposed of. The original first cost of the machines amounted to 5,245*l.*, and their present scrap value is placed at 657*l.*; the amount repaid by the operation of the sinking fund is 2,386*l.*, and the balance to be provided out of reserve fund to extinguish the remaining debt is 2,202*l.*

At the next meeting of the Islington Borough Council the lighting committee will report that on March 2 last the late Council resolved to proceed with a scheme for the extension of arc lighting at an estimated cost of 21,011*l.*, but they now propose to go fully into the details of the scheme and report thereon at a later date. The electrical engineer has been instructed to proceed no further with the works, except where cables have been already laid down. The committee will ask the Council to approve of this action.

ACCORDING to the *Japan Herald* two important electric railway proposals for Kobe are now under consideration by the Government, whose official sanction thereto is expected shortly. The first is that of the Kobe City Electric

Railway for permission to connect the Hanjin and the Kobe electric lines near the present terminus of the former line. The second is an application of the Hanjin Electric Railway Company for permission to extend its line to the American Hatoba. An agreement has already been arrived at between the Osaka Municipality and the Hanjin Electric Company concerning the connection of the latter line with the Osaka Harbour electric line.

THE Grimsby Town Council have adopted the recommendation of the electric-lighting committee, that in view of the developments taking place at Immingham, the Council take steps to secure a provisional order enabling them to extend their area of supply so as to include Immingham and other parishes. The mover said if the scheme were carried out fully it would cost nearly 30,000*l.* If they got the order they would be able to keep out competitors, while they would not be committed definitely to the total expenditure unless the demand for current was such as compelled it.

CONSIDERABLE extensions to the Aston electric-power station in Chester Street were officially brought into use on Saturday. The full capacity of the new generating set is 1,000 kilowatts, increasing the total capacity of the station from 1,450 to 2,450 kilowatts. The engine is capable of giving out approximately 1,400 indicated horse-power. The revolving weight of the fly-wheel, shafting, generator and cranks amounts to almost 100 tons, and revolve at a speed of 95 revolutions per minute. The total weight of the combined set is 225 tons, and the combined engine and generator rests on concrete foundations composed of 300 tons of concrete. The total cost of the extensions is between 15,000*l.* and 16,000*l.*

THE Alexandra Dock and Railways Company has applied to the Newport Corporation for quotations for the supply of a large amount of electric power, and the latter have agreed to offer three-phase electric current in bulk at three-farthings per unit, subject to the company giving a satisfactory guarantee as to the amount and period of consumption. The borough electrical engineer reports that it would be necessary for the Corporation to expend between 30,000*l.* and 40,000*l.* upon the plant required to meet the demand. The Post Office authorities have decided to take current from the Corporation for lighting the new post

CATHEDRAL SERIES.—MANCHESTER: THE NAVE, EASTWARDS.

office, and Messrs. Morris & Griffin, chemical works, East Usk, have applied for a minimum quantity of 100,000 units per annum for power purposes for at least three years.

THE tramways committee of Edinburgh Town Council have approved the draft agreement between the Corporation and the Edinburgh Suburban Electric Tramways Company, under which the Corporation agree to the company continuing the Dalkeith tramway from the city boundary at Nether Liberton, by way of Dalkeith and Pleasance, to a point at or near the Waverley bridge, to be fixed by the Corporation. By the agreement it is provided that all the works so far as within the city are to be executed to the satisfaction of the Corporation or their engineer. The promoters are to lay and maintain to the satisfaction of the Corporation the roads between the tramways and as much as extends 18 inches beyond the rails on each side of the tramways. The tramways are to be worked only by electrical energy or by other mechanical power approved by the Corporation. The company bind themselves not to erect any electrical station or machinery within the city, or to sell or distribute electrical energy within the city.

THE Marylebone Borough Council last week discussed a report of the lighting committee regarding the lighting of Oxford Street. A report presented to the London County Council by its highways committee alleged that the new electric lamp standards erected on small refuges in Oxford Street were an obstruction to traffic, and urged that the London County Council should promote legislation to obtain powers to deal with such cases of obstruction. The lighting committee of the Borough Council now repudiated

in the strongest manner possible the allegation that the standards and refuges were any obstruction whatever, asserting that, on the contrary, they were serviceable for regulating the traffic, and recommending that the legal and parliamentary committee of the Council be instructed to take all necessary steps for opposing any attempt of the London County Council to obtain greater powers of interfering with the duties and powers of borough councils in connection with the streets within their respective districts. This course will be taken.

## BUILDING AND BUILDERS.

MESSRS. PATMAN & FOTHERINGHAM, LTD., carried out the erection of the large Mission Hall for the use of Seamen, together with the general offices, which were recently opened. The same firm have nearly completed the rebuilding of the Avenue Theatre, which will be known as "The Playhouse."

THE housing committee of the Birmingham City Council will shortly submit a report recommending the acceptance of an offer for leasing the Bordesley Green land for the erection of working men's houses. The guiding principle is to make an experiment in the direction of leasing municipally owned land to building societies of public utility. The object of the committee is to show what can be done in the provision of housing accommodation for working men when the profits of the middle-man are eliminated.

At the Guildhall, London, on Tuesday a meeting of a committee of representatives of district councils for the national registration of plumbers was held. A resolution was passed requesting the Plumbers' Company to arrange for a deputation to the Local Government Board to urge the introduction by the Government of a Plumbers' Registration Bill, and that district councils should be asked to support the action of the deputation by all the means in their power. It was further resolved that local authorities should be requested to give preference to the employment of registered plumbers wherever possible. It was stated that the Plumbers' Company had spent 37,000*l.* in supporting the movement.

THE finance committee of the Metropolitan Asylums Board reported that in their estimates of capital expenditure for next year the following works should be included, they having been approved by the Board, but sanctions to borrow had not been received:—Central stores, new premises at Peckham, 18,000*l.*; bacteriological laboratories, new premises at Peckham, 9,090*l.*; Darenth asylum, industrial workshops, 3,500*l.*; Joyce Green hospital, cottages, reception-station, &c., 7,030*l.*; Belmont asylum, adaptation of boys' school (architects' approximate estimate for building works, 69,500*l.*; engineer-in-chief's approximate estimate for engineering works, 22,600*l.*), and other works. The committee ask for a total sum of 250,000*l.*

A WORKING-MAN was charged at Eccles on Monday under the 104th section of the Eccles Corporation Act, 1901, with constructing the drains in the back yards of several houses in Hampson Street, Peel Green, Patricroft, in such a manner as to be defective and injurious to health, and the chief sanitary inspector submitted to the Bench a pipe taken out of one of the yards of the houses that contained large lumps of cement. The joints of the drains were also bad. The assistant town clerk said that the health committee wished workmen to understand that it was very important that drains should be laid properly. The defendant had rendered himself liable to a penalty of 20*l.* As this was the first case taken under the Act, a nominal penalty of 10*s.* and costs was imposed.

MR. A. A. G. MALET, M.I.C.E., held an inquiry into an application by the Clay Cross Urban Council for a supplementary loan of 4,600*l.* in respect of their scheme of sewage and sewerage disposal. The solicitor to the Council said the contractors for the Danesmoor works had obtained judgment for 1,400*l.*, with costs. The sheriff's officers had been in possession, but they were paid out, the costs being 58*l.*, and the Council entered into an undertaking to pay interest on the amount due at the rate of 5 per cent. upon the judgment until the amount was paid. At the same time the Council undertook to apply with all expedition for a supplementary loan. Since then further certificates had been issued. The contractors could further proceed against them if they wished. The Inspector said the Board were desirous of helping the Council out of their difficulties and at the same time the contractors. The difficulty was due

to the figures not being got ready by the engineer. He would put it before the Board that the Council and the contractors were prepared to meet one another. He would have to adjourn that inquiry until the engineer had prepared his figures. The inquiry was adjourned *sine die*.

At the Lancaster County Court on Friday Judge Hans Hamilton gave judgment for a dentist, who sued Mr. R. Thompson, builder, Lancaster, and Mr. R. Leighton, Lancaster, for damages to a motor-car. Going through Ashfield Avenue the car came in contact with a sewer grid, 10 inches above the roadway, the roadway being unfinished. The damage cost 18*l.* to repair. The road had not been taken over by the Lancaster Corporation, and his Honour said he had no doubt the law was that the owners of property on either side of the street held the freehold of the street, and were liable for the obstruction. It was a serious matter for the public and property owners if it was true that streets in Lancaster were sometimes not taken over for fifteen or twenty years, and something should be done by property owners in unmade streets to protect themselves and the public by putting up notices that the roads were not open for use. His Honour gave leave to appeal.

THE chief executive officer of the Irish International Exhibition 1907 has been making inquiries regarding the numbers employed in the exhibition, their nationality, and the rates and amount of wages paid. The total, which has since been increased, was 404, and it was made up as follows:—8 foremen, of whom 5 are not Irish; 68 carpenters and sawyers, all Irish, and members of local branches of the trade societies; 55 plasterers, all members of recognised trade societies (41 of these are Irish born, 5 have worked in Ireland for several years, and 9 not Irish are specialists in fibrous plasterwork); 8 sheeters and zinc workers, who are specialists, one being Irish; 14 painters, all Irish, employes of Messrs. Dockrell, on a sub-contract; 10 gasfitters, all Irish, employes of the Alliance Gas Company; 12 electricians, all Irish but one, employes of Messrs. Coates & Son; 193 carters, scaffolders and labourers, all Irish (majority born in Dublin, or resident for a great number of years); 8 miscellaneous, of whom 7 are Irish; 28 members of the staff at executive offices and at the contractors' office, of whom 22 are Irish. The weekly salaries and wages are, approximately, 550*l.*;

AND SAMPLE.

221 of the workers are receiving pay at rates above those recognised by the Master Builders' Association of Dublin. It will thus be seen that of the 404 persons employed 371 are Irish, while of the remainder several have worked in Ireland for some years, and the rest are specialists in the work which is being carried out.

### VARIETIES.

THE rateable value of the county of London amounts to 43,905,961*l.*, an increase of 449,481*l.* compared with the last quinquennial valuation.

THE Metropolitan Water Board have accepted the tender of Messrs. Pethick Bros. for the construction of six new filter beds and a supply tank on the Board's land at Long Ditton, at the sum of 54,783*l.*

THE Middlesbrough Town Council have adopted a resolution in favour of the promotion of a Bill in the next session of Parliament authorising the Corporation to construct a transporter bridge across the Tees and to discontinue the Middlesbrough and Port Clarence Ferry.

THE municipal authorities of Antwerp invite tenders by December 20 for the erection of metallic structures on the quay side at an estimated cost of 8,300*l.* The specification may be seen at the offices of the Commercial Intelligence Branch, 73 Basinghall Street, London, E.C.

THE British Fire Prevention Committee contemplate undertaking in the near future a series of tests with different ordinary "first aid" appliances, such as buckets of water, buckets of sand, hand pumps and also with proprietary extincteurs, with a view of ascertaining their relative merits.

THE Scarborough Town Council have adopted the minutes of the education committee, which showed that, subject to the consent of the Board of Education, they had authorised the purchase of two houses and 7,533 square yards of land in Seamer Road for the erection of Council schools.

THE East Westmorland Rural District Council have just concluded their deliberations in connection with a proposed water scheme, with the Ravenstonedale hills as source

of supply, for Brough and a number of other villages in the same neighbourhood. The estimated cost is 8,500*l.* It is expected to commence the work in about three months' time.

THE police committee of the City Corporation has adopted a scheme for building at a cost of 16,723*l.* dwellings in Bishopsgate for married officers and constables of the City police force, and likewise for providing accommodation for an ambulance station in connection with the new electric service which will come into force in the new year.

THAT American architecture does not mainly consist of those tall buildings called "skyscrapers" is shown by the collection of photographs, &c., of American work on view at the Builders' Exchange, Birmingham. So attractive has it been found by the numerous architects who have already visited the collection, that by special desire the exhibit will remain on view until January 5 next.

THE Holywell Urban Council on Monday decided to ask the Birkenhead Corporation whether they would be prepared to entertain an application to supply the town with water in bulk—for the purpose of a town water supply—from the main which it is proposed shall convey water to Birkenhead from the river Alwen, and which main, it is proposed, shall go through Northop, a distance of some six miles from the town.

CANON PURCELL, the chairman of St. Austell Board of Guardians, who has visited the new county asylum extensions at Bodmin, told the Board that his inspection was an unpleasant revelation to him. He was perfectly amazed to see the lavish expenditure of the ratepayers' money. The hall was almost burlesque in the extravagance of the decorations, and the dining-room for the inmates was a most magnificent place.

THE Tynemouth Town Council have decided to promote a Parliamentary bill in connection with their water scheme. The Bill proposes to increase the Corporation's borrowing powers to 800,000*l.*, making it possible to raise loans to provide for large extensions of the water undertaking. The Corporation expect to secure contracts for supplying Newbiggin, Ashington, Cramlington, Bedlington and Morpeth with water, and the new works for that purpose will cost 62,000*l.*

## CORRUGATED IRON FOR BUILDINGS

Superseded by the use of

(FIREPROOF)

# Kent Slab

(FROST AND  
WEATHERPROOF)

Buildings for all purposes which have hitherto been constructed of Galvanized Iron and Matchboarding can now be built Cooler in Summer, Warmer in Winter, and perfectly Fireproof, by the use of **KENT SLAB**. The Cost is no more, and as they do not require the repairs and painting of Galvanized Iron the cost of upkeep is done away with, and the lasting qualities are far in advance of any Iron Building.

**Kent Slab is the future Building Material.**

Write for Catalogue and list of Works carried out before using anything else.

**The Kent Slab Co., 27 Queen St., London, E.C.**

THE Christmas number of *Harper's Magazine* contains abundance of reading matter suitable for the season, copiously illustrated, and among the articles of a more solid character is one on "The Tiber," by M. van Vorst, and another on "New Orleans," by C. H. White.

THE proposal for the completion of the building of the Glasgow School of Art has now taken definite shape. The estimated cost of the proposed completion of the building is as follows:—Western extension, including furniture, fittings, &c., 22,000*l.*; new service stair in east portion of school, 680*l.*; cloak-rooms and lavatories, 500*l.*; architects' and measurer's fees and sundry charges, 1,820*l.*—making a total of 25,000*l.*

THE South Shields Town Council have agreed to petition quarter sessions in favour of the closing of a public landing, in order to then allow the Middle Dock Company to construct a dock 400 feet long, to give accommodation for their increasing ship-repairing business. The scheme will be carried out in a few months, and will necessitate the setting back of a street of houses by 70 feet. The new dock will cost over 70,000*l.* and increase the number of workmen by over 1,000.

THE Institute of Sanitary Engineers held their annual dinner on Monday last at the Holborn Restaurant. Professor E. G. Coker (the retiring president), who occupied the chair, in responding, stated that both financially and numerically the Institute occupied a much better position than it did twelve months ago. They had reduced their debts considerably, and had enrolled eighty-eight new members. Sir William Mather, in proposing the toast of the evening, observed that in the efforts of that institution one saw the awakening of a spirit throughout the whole country to regard sanitation as one of the primary things of life, and by encouraging its associates and members to study the discoveries of science it was doing very great good for the whole of the community.

THE authorities of the Roman Catholic see of Hexham and Newcastle have determined to complete the erection of the partially-built memorial church in the Bowes Museum Park at Barnard Castle. The sum of 27,000*l.* was originally bequeathed to the church, and 8,000*l.* has already been spent upon it. The balance is invested in Consols, which, if

realised, it is thought may produce 17,000*l.* With this sum it is proposed to complete the structure and to create an endowment.

UNDOUBTEDLY one of the most artistic weeklies published in this country is *Country Life*; it is hardly possible to find better printing, and with the advantage of really good paper the blocks produced are always excellent. The Christmas number is just to hand, and is replete with interest from cover to cover. The reproductions of Queen's College, Oxford, and of Vaux le Vicomte, under the title of the "Châteaux and Gardens of France" are beautiful reproductions, and the letterpress is most interesting. In fact, a better shillingsworth is not to be obtained.

It is stated that further changes are in store for the Royal Engineers in consequence of the carrying out of the recommendations of Sir Evelyn Wood's committee on the reorganisation of the corps, and the proposals which are shortly to be carried into effect will further reduce the *personnel*. It is understood that the whole of the barrack work will come under civil control, except that of a fortification type, and that no military foremen of works will be required. This change will also affect the officers, a large number of whom act as building accountants of military works. The clerical staff will also in time be reduced. It is fully intended to make all the sapper branches strictly combative, and free the corps from the incubus of purely civil work.

THE Aston Town Council recently received a petition signed by shopkeepers and residents in favour of the paving of Aston Road from the Cross to Birmingham city boundary with wood blocks instead of granite setts. From the report of the surveyor it would appear that the present cost of keeping the road in repair with macadam averaged 244*l.* per annum, towards which the County Council contributed 200*l.*, leaving 44*l.* to be provided by the Council. Assuming the road to be paved with granite setts, the first cost would be 5,000*l.*, and the cost per annum for maintenance, repairs and repayment of loan would be 441*l.* In the event of the road being paved right across with wood, the first cost would be 7,700*l.* The annual cost for maintenance, repairs and repayment of loan would be 1,034*l.* The matter has been deferred for twelve months.

At the Smithfield Club Show in the Agricultural Hall, which closes to-day, Messrs. Barford & Perkins, of Queen Street Iron Works, Peterborough, make an interesting display of agricultural machinery, corn mills, heating apparatus, a vertical steam engine and boiler, also photographs of their well-known motor-rollers, which are much in requisition for asphaltting, cricket grounds, golf links, parks, racecourses and for road-making. Among numerous other exhibitors of implements and machinery are Messrs. Clayton & Shuttleworth, Ltd., Fielding & Platt, John Fowler & Co., Ltd., R. Hornsby & Sons, Ltd., J. B. Petter & Sons and John Bellamy, Ltd.

The Sheffield town clerk has been served with a county court summons in an action by the West Riding of Yorkshire Rivers Board against the Corporation, in which the complainants, after complaining that the defendants caused and continue to cause to fall or flow, or knowingly permitted or still permit to fall or flow, and to be carried into the river Don, certain liquid sewage matter, claim a summary order requiring the defendants to abstain from the commission of the alleged offence, and from otherwise offending against the provisions of the Rivers Pollution Prevention Acts 1876 and 1893. The summons is returnable for January 16 next. The highway and sewerage committee have instructed the town clerk to retain counsel and take such steps as he may think necessary in defence of the action.

Mr. F. H. TULLOCH, Local Government Board inspector, inquired at Blackpool into an application made by the Corporation for powers to borrow 3,000*l.* for the extension further seawards of the existing sewer outfall past Rigby Road. The town clerk explained that a bank had formed not far off the mouth of the outfall, and it was desired to continue the pipes beyond this bank into deep water. In reply to a letter he had received from the Local Government Board, he said that the Acts relating to main roads which the Local Government Board had brought to his notice did not refer to that application, as there were no main roads at the bottom of the sea. Further, he had not given notice to adjoining rural authorities because the work was beyond the sea level and out of their jurisdiction, and he had further not considered it necessary to give notice to owners and oc-

cupiers of land because it was quite obvious that there were none. The only owner would be the King, and notice had been forwarded to him through the Home Secretary. The borough surveyor said he felt sure that the proposed extensions would not be damaged by the heavy seas. The extensions would be 150 yards long, and the pipes would be secured to prevent them from rolling. He thought they would quickly sink into the sand.

Mr. P. C. COWAN, chief engineering inspector, Local Government Board, commenced an inquiry in the City Hall, Dublin, into an application by the Corporation for sanction to loans of 9,000*l.* and 134,842*l.* 8*s.* 6*d.*, for the purposes respectively of completing the Bride's alley area improvement scheme under the Housing of the Working Classes Acts, and providing an additional storage reservoir at Roundwood in connection with the water supply to the city. The inspector severely commented on the fact that in spite of his requests he had not been supplied with plans in connection with the inquiry. The effect of this extraordinary failure to supply the necessary documents would doubtless be to cause much delay that would otherwise be avoidable, for he must now commence *ab initio*. It affected, in the case of the waterworks, a population of 364,000.

THE Guildford Town Council have been considering the question of plans and particulars of the town hall in case of fire. A letter was read from Messrs. Clemence & Moon offering to give certain information for 10*l.*, or to provide a set of drawings with figures for 25*l.* A letter was read from Mr. W. G. Lower, stating that he had certain plans and particulars in his possession which he would place at the disposal of the Corporation if they desired to use the same at any time. A letter was also read from Mr. T. Talford Cummings, A.R.I.B.A., offering to supply to the Corporation a set of drawings and particulars of the town hall free of cost. It was resolved that the offer of Mr. Cummings be accepted and that he be thanked for the same. It was also resolved that Mr. Lower be thanked for his offer, and at the same time the town clerk write and state that if Mr. Lower could see his way to hand over the plans and particulars in his possession to the Corporation the Council would be pleased to accept the same, and place them with the other town records.

6-11 Imperial Buildings, Ludgate Circus, E.C.

THE Sheffield City Council are sending a letter to local authorities with reference to the Local Government Board's action in having declined to sanction the borrowing of money with which to purchase 42 acres of land in the suburbs of the city in a district the Council considered suitable for purposes of the housing of the working classes, and urging the desirability of greater powers being acquired by municipalities with respect to the acquisition of lands without being subject to some restrictions imposed by the Local Government Board. They are asked to support the Sheffield City Council's attitude by petition to the Prime Minister and other members of Parliament.

THE Board of Water Supply of New York City, U.S.A. is about to let the first contract for part of the new 160,000,000 gals. system of waterworks to supply the city with 500,000,000 gals. of water daily from the Catskill Mountains. The principal features of the entire system are:—The Ashokan reservoir, a very large impounding reservoir, about 12 miles long, of over 100,000,000,000 gals. capacity; an aqueduct approximately 82 miles long; a large storage reservoir; a filtration plant near Scarsdale; a terminal distributing reservoir in Yonkers, and conduits from it to the various boroughs of the city. The aqueduct will comprise a number of stretches of plain concrete conduit 17 feet high by 17½ feet wide inside, a number of tunnels on the hydraulic gradient, several siphons across shallow valleys, to be made of reinforced concrete or steel pipes, and other siphons, crossing deep valleys and the Hudson river, which will be masonry lined tunnels designed to withstand great pressure. The contract about to be let is for portions of the plain concrete cut-and-cover aqueduct, three tunnels on the hydraulic gradient and a short piece of reinforced concrete pipe.

THE following particulars regarding the progress made by the First Garden City, Ltd., with the Garden City estate of 4,000 acres purchased at Letchworth, Herts, three years ago, are of interest. Over 4½ miles of new roads have been made, and 14½ miles of water mains, 8 miles of gas mains and 8 miles of sewers have been laid. Waterworks and gasworks have been constructed, and extensive railway sidings in direct connection with the Great Northern Railway have been made. Sites for the erection of 520

houses, 25 shops, 12 factories, a church, a chapel, a public hall, schools, &c., have been let or selected. Buildings of a capital value of some 162,000l. have already been erected or are in course of erection. Of these, buildings to the value of 6,500l. have been erected by the company itself. The present water supply is sufficient for a town of 6,000, and the gasworks are capable of producing 6,000,000 cubic feet of gas per annum. The population on the estate at present consists of about 2,000 people, but at the end of the summer of 1907, when all the factories are in working order, it is fully anticipated that between 4,000 and 5,000 people will be resident at Letchworth.

### THE BOROUGH POLYTECHNIC.

THE annual distribution of prizes and certificates at the Borough Polytechnic Institute took place on Tuesday evening last, in the presence of a large gathering of students and friends. The proceedings commenced with the opening remarks of Mr. J. Leonard Spicer, the chairman; and afterwards Mr. C. T. Millis, the principal, read his report, from which it appears that, although some twelve similar institutions have been opened in London during the last twelve years, the work has developed and increased satisfactorily, and at the examinations held last year the number of papers worked was 1,009, as against 849 the previous year, and the number of passes 716, as against 553. That the teaching staff has done excellent work among the students is evident from the results read, while it appears that considerable additions are being made to the equipment of the electro-technical and engineering departments; and thanks to the liberal grants of the London County Council the laboratories, workshops and classrooms are so thoroughly well furnished that it is anticipated the Institute will not only maintain its position, but do even better work for the citizens of London in the future than it has done in the past. A cordial vote of thanks was tendered to Lord Monkswell for distributing the prizes, &c., and also to the central governing body, as well as the London County Council. The proceedings, which were enthusiastic throughout, closed with a vote of thanks to the chairman of the occasion, Mr. Leonard Spicer.

## The ARCHITECT and CONTRACT REPORTER.

*New Year's Special Issue.*

*77th Volume.*

6 to 11 IMPERIAL BUILDINGS,

LUDGATE CIRCUS, LONDON, E.C. December 1906.

Dear Sir,—On Friday, January 4th next, TWENTY THOUSAND (20,000) COPIES of "**THE ARCHITECT AND CONTRACT REPORTER**" will be sent to ARCHITECTS, BUILDERS, and CONTRACTORS throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"**THE ARCHITECT**" is, in its Advertisement Columns, the *most reliable* reference for all who are engaged in Building Operations, and is acknowledged to be *the best medium for Advertisers*. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than *one-fourth the cost* of sending 20,000 Circulars by post, and it is well known that Circulars are frequently thrown into the waste basket unread. Our *New Year's Double Number* always contains beautiful illustrations and valuable letterpress, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that if you wish to secure space for an Advertisement, we shall be much obliged if you will *communicate with us* without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir, yours faithfully,

GILBERT WOOD & CO., LIMITED.

**MODEL COTTAGE EXHIBITIONS.**

UNDER the auspices of the National Housing Reform Council, exhibitions will be opened in Sheffield and Newcastle-on-Tyne about the middle of June, 1907.

In both cases the exhibitions will be held on municipal land, and the average number of houses will not exceed twelve per acre. It is hoped that the exhibitions will provide civic object-lessons in regard to the value of proper planning of new housing areas.

Surveyors and architects will be asked to send in competitive designs for the planning of the site of the exhibition. This is a new departure in the arrangement of model cottage exhibitions.

Great care has been taken to ensure that the maximum prices fixed for cottages competing shall permit a proper combination of cheapness and goodness of construction, and cover architect's fees and builder's profits, as well as cost of construction. As the cost of building is greater in the Newcastle district, the maximum prices there fixed are higher than in the case of Sheffield.

Each cottage will be provided with a bath.

Both committees feel that a great public service was rendered by the Letchworth Exhibition in 1905. They recognise, however, that no effort must be spared to avoid mis-statements of cost, and have decided to make a condition of entry an agreement that each competitor shall, if called upon to do so, sell the cottage to the local authority on whose land the exhibition is being held at the price stated in the catalogue, and, if called upon to do so by the local authority within three months, to build not more than twelve cottages on the adjoining municipal estate at a similar price. The committee feel that in making these conditions they will have the approval of competitors and the public, and that in practice these conditions will secure the *bond-fide* statement of cost.

These exhibitions will be the first model cottage exhibitions ever held on the borders of great cities. The by-laws in both cases are stringent, and the rates of wages are town rates. The cost of cottages built in the exhibitions can, therefore, be taken as representative.

**THE NEW TUBE.**

THE St. Pancras Ironwork Company, Ltd., have carried out for the Underground Electric Railways Company, Ltd., the contract for spiral staircases which have been fixed at all the stations on the following Tube railways:—Baker Street and Waterloo; Great Northern, Piccadilly and Brompton; Charing Cross, Euston and Hampstead. There are upwards of forty stations. The staircases are about 18 feet diameter and vary from 50 feet to 200 feet in height, according to the position of the stations. Treads and landings are covered with a new and improved non-slipping material. The staircases are built entirely of steel, and were designed by the St. Pancras Ironwork Company, Ltd., for the railway company. The design, we are informed, involves an entirely new principle in staircase construction, combining great strength with lightness and economy of material, while being of very neat appearance. Besides the staircases, the St. Pancras Ironwork Company, Ltd., have carried out a large quantity of work for the engineer in the way of iron doors, cabins for station-masters and for the electricians, and steel flooring above and below the lifts; and the architect, Mr. Leslie Green, entrusted them with the work for iron casements, lantern lights, pavement lights and doors at many of the stations on all three lines.

**MARMOR, LTD.**

It is a remarkable circumstance that as time goes on the influence of Greece increases. In its highest and palmiest state Greek art and Greek literature were not appreciated by so large a number of people as at the present day. Homer is better known among Englishmen than Shakespeare, and the finest example of sculpture in an Academy exhibition obtains less praise than the Phidian marbles in the British Museum. Greek architecture is still a potent influence, and the best work that can be produced shows it directly or indirectly. It is remarkable that in a material sense Greece is likely to exercise a sway over us which would have been impossible at an earlier time. Nature endowed Greece with beautiful marble, and there is no doubt the material had much to do with determining the character of the architecture. The quarries

are so extensive there need be no misgiving about depriving the Greeks of the means of keeping up the old traditions in architecture. Intrinsically Greek marble is most attractive from its qualities. But it has the additional advantage of possessing associations which distinguish it from all other varieties of the material. British enterprise has obtained possession of all the most valuable marble quarries in Greece, and it is now possible to have a building erected in London of stone which corresponds in nature with that of the Parthenon and other glories of ancient Athens. It is not only the fine white Pentelicon marble that is available, or the somewhat softer variety from Paros, but we can also have glorious red, such as the Romans enjoyed, probably more than the white, dark green and other colours. Both for interior and exterior work the marbles will be found charming. Any of our readers, however, who desire information on the subject can obtain it from Mr. William David, the general manager of Marmor, Ltd., who has not only a practical knowledge concerning the marbles, but has a commendable enthusiasm concerning all that relates to them.

### WATER REGULATIONS.

The joint committee on water regulations met at the Guildhall on Monday. Among the authorities and companies represented were:—Birkenhead, Bradford, Birmingham, Bury, Hull, Preston, Newcastle, Weardale, South Staffordshire, Stockport, South Hants and the Metropolitan Water Board. In the absence of Dr. Robert Crawford, of Glasgow, chairman of the committee, Mr. W. D. Caroe, master of the Worshipful Company of Plumbers, was voted to the chair. In opening the proceedings, he said that if the chairman had been present he would, no doubt, have remarked on the work of the committee from the point of view of the Public Health Administrator and Water Authority. He himself regarded the matter rather from the point of view of the architect and consumer. From his own experience he found the greatest difficulty in dealing with the large number of varying regulations, and the Council of British Architects would warmly welcome the codifying of water regulations and the setting up of such standards for fittings

as would represent, at any rate, an irreducible minimum of efficiency.

Mr. E. Antony Lees (Birmingham) presented the report of the general purposes committee, together with a draft annotated model Code of regulations with schedules attached, setting out the specifications of water fittings, &c., compiled from reports of the various sub-committees and prepared in form for publication.

On the motion of Mr. J. Watson (Bradford), seconded by Mr. Bancroft (Hull), the general purposes committee were empowered to conduct the necessary negotiations with the Local Government Board, with a view to the inclusion of the draft Code framed by the committee in the model series of regulations issued by the Board for the purpose of Local Acts and Provisional Orders, enabling regulations to be made on the subject of the prevention of waste or contamination.

It was pointed out that in view of the authoritative character of the conclusions embodied in the Code, representing the majority of the larger water undertakings and three-fourths of the consumers of water in the United Kingdom, and also the practical opinion of architects, plumbers, manufacturers of fittings and others specially conversant with the subject, the Local Government Board might confidently give a wider and more definite interpretation of their present powers, and thus secure greater uniformity of practice in regard to water regulations to the great advantage of all concerned.

Mr. Fitzroy Doll and Mr. W. D. Caroe were added as members of the general purposes committee.

It was reported that the Admiralty had adopted for use in His Majesty's naval establishments the standard specifications for water fittings framed by the joint committee. The report of the standardisation committee was adopted, fixing the meetings of that committee for the last Saturday in January, April, July and October, to deal with new fittings and apparatus offered for standardisation, and tested in London or at Belfast, Birmingham, Bradford, Glasgow, Newcastle and Plymouth. Communications were reported from a number of water authorities and others pressing for copies of the model Code. The committee decided that the publication of the Code should be deferred for a short time, pending the negotiations now in progress with the Local Government Board.

**AN EARLY TOWER.**

THE death occurred on Thursday in last week at Verulam Buildings, Gray's Inn, London, of Mr. Andrew Thomas Turton Peterson, who formerly resided at the Towers, Arnewood, Hordle. The deceased gentleman, who was in his ninety-third year, was a barrister-at-law, and for many years leader of the Calcutta Bar and also a judge of the High Court of Calcutta. Mr. Peterson will be best remembered, says the *Hampshire Advertiser*, by the remarkable tower which he built more than a quarter of a century ago at Hordle, three or four miles to the west of Lymington, which is undoubtedly the most conspicuous landmark in the county. The tower was the culmination of a series of experiments in Portland cement concrete, extending over a long period. In style it is a campanile, to the square of which is incorporated a hexagon, containing a spiral staircase communicating with the upper storeys. In this there are some 330 stairs, each moulded separately, laid in position and incorporated in the walls as the building progressed. The lower storey is entered by a remarkably fine Gothic doorway, moulded in concrete, and the upper storeys are lighted by windows of a Gothic style, which are of a red concrete. At a height of 92 feet from the ground the outline is broken by a bold cornice, and the same occurs at the summit, at an altitude of 198 feet. Above this rises an octagonal tower, or observatory, surmounted with a dome-shaped roof of smaller size than the main tower and bringing the total height to 218 feet. The storeys, or rooms, as they may properly be called, are eleven in number and 18 feet square at the base, being larger towards the top, where the walls diminish in thickness. At the base the walls are 2 feet thick, thus making the tower a square of 22 feet on each side, to which on the north side is added the hexagonal staircase. The effect produced is of massive solidity, but of a fine artistic line, which is pleasing and not monotonous to the eye. The building of the structure was novel, Mr. Peterson being his own architect and builder, both designing and carrying out the work under his own supervision. It was built throughout by local labour. All the frames, moulds, iron and woodwork were made entirely by local carpenters and blacksmiths, while all concreting was done by a band of

unskilled labourers, whom Mr. Peterson had organised and trained. A great deal of the shingle used in the concrete was brought from the beach at Milford-on-Sea. Arnewood Towers, which adjoin the tower, is also built of the same material, as are several farmhouses and buildings on the estate. Visitors are allowed to inspect the tower, and they come from all parts to see the remarkable structure. At the time of building it was generally believed that the tower was built by the deceased gentleman, who was then said to be a spiritualist, as a mausoleum, but after its erection he became a convert to cremation, still retaining the desire that his ashes should be deposited in the vault beneath the tower.

**DISTILLERY WALLS.**

AN accident lately occurred through the collapse of the walls in the draff-house of a distillery in Glasgow. At the inquest on a man who died of injuries received Mr. John Stewart, builder, stated that he went to examine the premises on the day following the accident. The scene of the catastrophe was a mass of ruin so confused that it was in parts dangerous to attempt a close inspection and extremely risky even to approach near to it. On this occasion he only had a general view. He had to postpone his examination until the debris was taken away. He submitted his report prepared on behalf of the Procurator-Fiscal. It stated that the lower part of the structure was brick walls, about 28 inches thick up to a certain height and 23 inches thereafter. The lower structure comprised two storeys. The ground floor was the draff-house; the first floor contained one comparatively small tun; on the top of this were the draff store tanks. This lower structure, he understood, had been about twenty years old. About ten years after two elevated platforms were erected on which were built the upper tanks. The whole composite structure would measure about 84 feet from the street to the top. Continuing, he said the more immediate cause was the giving way of two separate points of the walls. Whether the walls of the draff-house gave way at the two points simultaneously could not be determined, nor could it be said that any indication of crushing was evident previous to the accident, but he was strongly of opinion

CHARLTON, LONDON, S.E.

that some cracks must have developed for a considerable period. This might have been due to deterioration caused by the weather outside and by the constantly steamy atmosphere inside acting injuriously on the lime mortar with which the walls were built. He did not think that any fault could be found with the tanks themselves, but the brick walls had been taxed to their utmost capacity by the weight above. The immediate result of the smallest subsidence would be the alteration of the centre of gravity in the liquor in the tanks, causing undue weight on certain parts of the supports.

In cross-examination, Mr. Stewart said he was of opinion that a crushing—a disintegration—had been going on for some time, but that it might not have been observed. It was quite possible, in the dark upper part of the draff-house, that these cracks may have been going on even after the walls had been particularly examined. It was not absolutely necessary that they must have cracks going on for some considerable time before such an accident.

Mr. Frank Burnet, architect, said that, so far as he could make out, two and a half tons per square foot was, as nearly as possible, the weight resting on the walls. This was well within the standard measure of safety recognised by people who had devoted time and experience to such matters.

Mr. Charles Fuller Hogg, civil engineer, corroborated the remarks of previous witness. He was unable to suggest anything in regard to the direct cause, but he was quite satisfied that the disaster was not due to any collapse of the brick wall from superincumbent load.

The jury found that they were unable to say what had directly caused the collapse of the building.

#### GREAT CENTRAL RAILWAY.

THE complete provision made by the great railway companies nowadays for the rapid conveyance of Christmas parcels and hampers is in striking contrast to the old-time methods, and the Great Central Railway Company are to the front in catering for the needs of the public at Christmas time, having made complete arrangements for the collection, quick transit and prompt delivery of Christmas packages in all the chief towns on their system. Frequent

collections of parcels will be made at the receiving offices in London and the large centres, and the traffic will be despatched by the first available train after receipt. Special trains will be run, and through vans attached to the principal express and mail trains to accommodate the traffic. Reduced through rates are now in operation, and the minimum weights formerly charged on packages of perishables at owner's risk have been abolished, and the charges are now computed at actual weight. The rates for parcels carried short distances are lower than those by parcel post, and in the case of longer distances the rates for parcels beyond 1 lb. by parcel post are not exceeded. A duplicate label should be enclosed in each package, so that the name of the consignee may be ascertained in the event of the outside address becoming detached or defaced. A van will be sent to collect anything you wish to despatch on ringing up "Parcels Superintendent, Marylebone Station, No. 584 Paddington."

In a worthy spirit of enterprise the Great Central Railway Company are catering largely for the Yuletide traffic. Most extensive arrangements have been made for the running of express trains, with buffet car accommodation, at excursion fares, from Marylebone on Saturday, December 22, and Monday, December 24, to more than two hundred of the principal towns and holiday resorts in the Midlands, Yorkshire, Lancashire and the general districts of the North. These facilities on the Saturday and on the Monday are offered in order that the convenience of different sections of the travelling public may be suited. It is good to see that the railway companies are more closely studying the needs of their patrons. There is no doubt that a large number will leave Marylebone on the Saturday, but shopkeepers and others, whose business will keep them in town until Christmas Eve, will have the advantage of suitable trains to take them for the "home holiday" of the year. By applying at Marylebone station, or any of the company's town offices or agencies, or sending a post-card to Publicity Department, 216 Marylebone Road, N.W., intending passengers will be supplied with an "A B C" excursion programme, from which they can easily ascertain just how, and at what cost, a long or short journey may be taken over this comfortable and expeditious system.

## Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does not require expensive pressure-plant; does not reduce the mechanical efficiency of the timber; does not increase the liability of the wood to inflame; does not render the wood poisonous to human beings or domestic animals; and does not leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW  
and 6 Crosby Square, LONDON

NEW IMPERIAL PATENT

### SUPERFINE FLAX LINE.

The above article is now being manufactured and sold in large quantities for Greenhouse Sashes, Public-house Shutters, and other heavy work. The Manufacturers would recommend it for its strength, and the large amount of wear in it, consequent on its peculiar manufacture.

AUSTIN'S IMPERIAL PATENT FLAX SASH AND BLIND LINES (two Prize Medals awarded). The Manufacturers of the above articles particularly wish to draw the attention of the trade to their Imperial Patent Flax Lines, of which they are now making six qualities, all of which they can strongly recommend, as they have given unqualified satisfaction to the trade for now over One Hundred Years, and the Proprietors continue to give their personal attention to the manufacture of these goods.

They also invite the particular attention of the trade to their IMPERIAL PATENT BLIND LINES, which are very superior to anything yet offered.

They can be obtained of all Rope-makers, Ironmongers, Merchants, Factors and Wholesale Houses in town and country.

N.B.—Please note that all our goods, as advertised above, are labelled either inside or outside with our Trade Mark—"The Anchor."

SIR ARTHUR HORT, Bart., writes:—

'Newlands, Harrow-on-the-Hill:

November 12, 1906.

"I have pleasure in stating that, since the completion of the work of installing my house (a School boarding-house) with the Leslie Walker Fire Alarms, the apparatus has given me entire satisfaction and we have had no 'false alarms.' We have had one alarm which led to the prompt extinction of a fire in a boy's room, and the apparatus was found to be in working order again immediately afterwards.

"Besides the 'private' part of the house there are about 30 boys' rooms in which fires have been burning for the last fortnight or so.

**27,000 IN USE.**

COOLEY'S PATENT

**DOUBLE DOWEL-PINS.**

By this system each Block is securely fastened to its neighbour, and by means of the double-grip of each Pin it is absolutely impossible for the Blocks to loosen; hence it can be recommended in all places where the traffic is heavy, such as in Factories, Schools, Public Halls and Sheds, &c.

For Wood-Paving purposes this system will considerably increase the life of the road by reason of the formation of a solid mass, which counteracts the destroying effects of vibration.

**AUSTIN'S**

NEW IMPERIAL PATENT

**SUPERFINE FLAX LINE.**

The above article is now being manufactured and sold in large quantities for Greenhouse Sashes, Public-house Shutters, and other heavy Work. The Manufacturers would recommend it for its strength, and the large amount of wear in it, consequent on its peculiar manufacture.

AUSTIN'S IMPERIAL PATENT FLAX SASH AND BLIND LINES (two Prize Medals awarded). The Manufacturers of the above articles particularly wish to draw the attention of the trade to their Imperial Patent Flax Lines, of which they are now making six qualities, all of which they can strongly recommend, as they have given unqualified satisfaction to the trade for now over One Hundred Years, and the Proprietors continue to give their personal attention to the manufacture of these goods.

They also invite the particular attention of the trade to their IMPERIAL PATENT BLIND LINES, which are very superior to anything yet offered.

They can be obtained of all Rope-makers, Ironmongers, Merchants, Factors and Wholesale Houses in town and country.

N.B.—Please note that all our goods, as advertised above, are labelled either inside or outside with our Trade Mark—"The Anchor."

## AU REVOIR, PLEASANT JOURNEY!

Thirty-third Year of Publication. Now Ready.

## "THE ARCHITECT'S DIARY" for 1907.

Specially prepared for the use of ARCHITECTS, SURVEYORS, and ENGINEERS.

These Publications contain not only the usual Diary, ruled and printed to a particular form, specially adapted for professional use, but, in addition, an Index, a Note-Book, a Rent and Insurance Register, a Cash Book, and a Ledger, with all the usual diary information, and much special matter referring to the various Architects' and Engineers' Associations; a digest of all the Acts passed last Session; contain also cases decided in the Superior Courts of Justice during the legal year, from November 1906 to August 1906, of interest to the Profession; Regulations of the London County Council under the orders of the Council applying to Music, Dancing, Theatre, and other Licenses; complete List of Metropolitan Surveyors and Districts, with Official and Private Address; Alphabetical Index to the Practical Statutes, Stamp Duties, &c., the whole forming in ONE VOLUME A COMPLETE SET OF BOOKS FOR THE YEAR. The Editions are—

No. 12.—One page to a day, size 8½ in. by 5 in., cloth, gilt, 4/6. | No. 13.—Two pages a day, size 8½ in. by 5 in., cloth, gilt, 5/6.

## "THE BUILDER'S DIARY" for 1907.

Specially prepared for the use of BUILDERS and CONTRACTORS.

No. 11.—Two days on a page, ruled and printed to a special pattern; also contains Bill Register, Note Book, Rent, Insurance, and Mortgage Register, Cash Book, Ledger and 130 pages of Tables of great value to all engaged in the Building Trade, in all 460 pages, size 8½ by 5, bound, whole cloth, gilt. Indexed, and paged to end of Diary. Price 4s. 6d.

"For use in the office of Architects and Builders they are better fitted than any diaries with which we are acquainted."—*The Architect*.  
 "The novel and valuable feature of these Diaries is that each volume forms in itself a complete set of books for the year."—*The Builder*.  
 "We have used them ourselves throughout the year with much satisfaction, and are glad now to draw attention to the new batch sent us."—*The Building News*.  
 "Messrs. Hudson & Kearns's Diaries need no recommendation save a trial."—*The British Architect*.  
 "The Diaries published by Messrs. Hudson & Kearns are quite unrivalled for convenience and comprehensiveness."—*Building World*.  
 "These Diaries may be said to have become the Diaries for the professions for which they are issued."—*Illustrated Carpenter and Builder*.

Sole Publishers, HUDSON &amp; KEARNS, Hatfield Street Works, Stamford Street, S.E.

ARCHITECTURE, FURNISHING, DECORATION, FINE ARTS.

## E. LYON-CLAESEN, Publisher, 8 Rue Berckmans, Brussels.

The house makes a specialty of publishing artistic editions of all kinds—*éditions de luxe*—and can supply all the works treating the subjects of Architecture, the Industrial and Decorative Arts, Furniture, Painting, Sculpture, the Fine Arts, &c.

TOURS ET TOURELLES HISTORIQUES DE LA BELGIQUE, or THE HISTORIC TOWERS AND TURRETS OF BELGIUM. From the water-colours of JEAN BAES. Among the architectural publications on the ancient edifices of Belgium, scarcely any can be found which give a reproduction of the admirable work and charming turrets, so justly considered of the greatest interest. This work consists of 50 coloured folio plates, difficult to distinguish from the originals, mounted on handsome card-board and contained in a rich portfolio. Price £4.

TRAVAUX D'ARCHITECTURE EXECUTÉS EN BELGIQUE, or ARCHITECTURAL WORKS EXECUTED IN BELGIUM. By HENRY BEYBART, Architect. This work contains the most interesting productions of Henry Beybart, and presents, with fullest details, his principal edifices. It is the reproduction of his own designs arranged by himself. Each construction is explained by plans, details, elevations, sections, &c., drawn to scale. The work consists of 240 folio plates, in a portfolio. Price complete, £14.

## L'EMULATION.

A MONTHLY JOURNAL. ORGAN OF THE "SOCIÉTÉ CENTRALE D'ARCHITECTURE" OF BELGIUM.

The latest volume of the New Series is in preparation, and will form a valuable addition to the Collection. Each number consists of four or five folio plates, eight pages of text, and a supplement of twelve pages. It produces in chromolithography, heliogravure, phototype, etching, &c., prominent examples of ancient and current architecture, and the text is devoted to this profession. The Supplement contains articles pertinent to architecture, and advertisements. Subscriptions date from January 1. Price per year, £1 8s. The whole year, when complete, in portfolio, £1 12s.

## E. LYON-CLAESEN, ART PUBLISHER, BRUSSELS (BELGIUM).

**NOTICE TO ADVERTISERS.**

Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.

**EDITORIAL NOTICES.**

In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.

Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.

The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which they may be interested.

No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.

The authors of signed articles and papers read in public must necessarily be held responsible for their contents.

**TENDERS, ETC.**

\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.

**COMPETITIONS OPEN.**

GOOLE.—Dec. 31.—The Goole Joint Body of Governors invite competitive designs for erection of a dual secondary school, accommodating 200 students, with provision for the conduct of technical and evening classes. ### BELGIAN CONTRACTS.

In his report on the trade and commerce of Belgium, Sir Cecil Hertslet, consul-general, comments upon the rarity of a British firm competing for public contracts in Belgium. And yet the Belgian authorities are singularly impartial in dealing with tenders. They are uninfluenced by nationality, provided that the tender for the work of construction is sufficiently low to favourably compare with the offers of firms situated in Belgium. The Consul-General says the principal drawback to the free competition of British firms is the import duties imposed on most finished articles in the way of machinery. Another impediment is the difficulty in obtaining labour to carry out the contract if awarded to a British firm unless such firm appoints a representative on the spot to superintend the engaging of workmen and the carrying out of the construction, or whatever the work may be. Sir Cecil Hertslet suggests that, in view of the difficulties which have to be overcome in the carrying out of contracts by British firms, it might be better for such firms to devote their attention to the firms of Belgian nationality who have been awarded the contract and endeavour to supply them with the necessary material required in the execution of the works. For instance, most of the large towns in Belgium offer from time to time contracts for the supply and laying of paving-stones for the streets and footpaths, which contracts are almost always awarded to local firms who can carry out the work at a lower cost than others established at a distance from the place where the work is to be performed. There would in such cases appear to be an opening for British trade in the supplying of the stone or granite for the work, and the endeavour of British firms should be to get into touch with and supply the material to local firms to which contracts have been awarded.

**TRADE NOTES.**

In the description of No. 5 Cheapside in our last issue, we omitted to mention that the whole of the carving and sculpture, as also the plasterwork, had been carried out for the architect by Mr. Gilbert Seale, of 22 George Street, Camberwell Road, London.

The whole of the locks and hardware for the new railway known as the Brompton and Piccadilly Tube were supplied by Messrs. Yale & Towne, Ltd., of City Road, London, E.C., and consisted of door furniture, Blount door checks, butts, &c., as well as Yale locks. The Bakerloo Tube was also fitted with Yale locks, both on the master key system. All the stations on each tube are controlled by a separate grand master key, which will actuate any and every lock. Each station in turn is controlled by a separate sub-master key, which will only control the locks on that particular station. The Yale and Towne Company have also received the contract for the furnishing of all the hardware for the new Charing Cross, Euston and Hampstead Tube.

THE Allington schools, near Grantham, are being warmed and ventilated by means of Shorland's patent Manchester grates and exhaust roof ventilators, the same being supplied by Messrs. E. H. Shorland & Brother, of Manchester.

MESSRS. OETZMANN & Co. have adhered to their annual custom of preparing a special catalogue of Christmas presents, in which everything required for adornment or use in residences is comprised and all at prices which are alluring.

A BILL was deposited in Parliament on Monday to incorporate the Channel Tunnel Company and to authorise the construction of works which shall form part of the scheme intended to connect England and France by means of a railway under the English Channel. Powers are sought to execute such works up to the three-mile limit, and it is proposed that a new company shall hereafter be registered for the purpose of carrying out the entire project. It is estimated that the scheme will involve a total outlay of 16,000,000l.

## BUILDING AND BUILDERS.

At Birmingham a daily supply of 19,000,000 gallons of water is obtained from Elan Valley reservoirs, and the quantity of compensation water running through the sluice at the bottom of Oaban dam is 27,000,000 gallons per day. If no rain fell for nine months it is estimated that Birmingham would still have a sufficient supply.

THE Lancashire education committee announce their intention of providing a new public elementary school for 600 children at Clifton, near Lytham, and in the meantime to accept the transfer to them of the Clifton and St. Anne's Church of England school as a public elementary school. The education committee also intend to erect a new public elementary school for 450 children at Cadishead.

THE Scarborough Corporation are about to apply to the Local Government Board for sanction to borrow 29,000*l.* already sanctioned by the provisional order, both on the Marine Drive and Approach Road. Three years ago the Corporation obtained a sanction to borrow 4,000*l.* for the Approach Road, and last year another order to borrow 25,000*l.* for the Marine Drive, both being subject to the approval of the Local Government Board.

AFTER a long spell of depression, it has been evident for some time, says the *Liverpool Courier*, that the North Wales slate trade is again looking up. Reports, on the whole of a favourable character, come from most of the quarry centres, and these show that for several weeks the stocks have been steadily diminishing. The increased demand has encouraged the quarry owners in the Carnarvonshire district to put up

the prices on all sizes, and the revised list will come into force in January. Prices have been advanced to bring them into line with Penrhyn and Dinorwic.

At Rutherglen Dean of Guild Court, a Glasgow builder was charged with having, in building a villa at Rutherglen, deviated from the original plans submitted before a previous court at which lining was granted in his favour. The procurator-fiscal stated that the deviations with which Mr. Glen was charged were thirty-five in number, and the Act provided that for each a fine of 50*l.* could be inflicted. If builders were allowed to deviate in the way he had done there would be no use for a Dean of Guild Court at all. After considering the case the court fined the respondent in the sum of 21*l.* for the deviations, and 1*l.* for a breach of the by-laws in covering up the "damp course."

At the last meeting of the Chelsea Borough Council the surveyor was asked for an explanation touching a communication from the London County Council enclosing a copy of a letter addressed to a householder intimating that the correct number of the house at present known as 12 Tedworth Square is 13. The surveyor said that the position had arisen solely in consequence of the popular superstition with regard to the number 13. The lady who occupied the house said the number was unlucky and she had therefore obliterated it and substituted 12. All the other houses in the square had odd numbers. No harm had really been done to anyone. The Council declined to interfere.

A GARDEN suburb has been planned for Wolverhampton. It is proposed to carry out the scheme on an estate of about 400 acres belonging to the Right Hon. Sir Richard H. Paget, Bart. The centre of the estate is 2 miles from the centre of the town, and the site is from 450 feet to 500 feet above sea level. It is well timbered and picturesque in character. The design of the whole area is being prepared in advance on garden city principles. Ample provision will be made for wide roads and open spaces for gardening and recreation. The plan of development is being prepared by Mr. Detmar Blow and Mr. Fernand Billerey, architects, and Mr. Thomas Adams, late secretary and manager of the First Garden City, Limited, is acting as agent for the owner in carrying out the scheme. Sites will be sold under certain

restrictive covenants, which, while giving full security to the individual, will prevent haphazard speculation to the public detriment in the future, and it is hoped to make arrangements to ultimately give the community sufficient control over the area to be developed, including all open spaces, to enable it to prevent overcrowding and to secure permanence to the principles underlying the scheme. It is also proposed to hold a model housing exhibition on the estate in the late summer and autumn of 1907, when prizes amounting to at least 250l. will be awarded for the best houses containing four and five rooms, and erected at a cost not exceeding 250l.

### ELECTRIC NOTES.

THE electric-light installation at the Guildhall, London, is about to be extended at a cost of 1,000l.

MESSRS. BRUCE PEEBLES & CO., LTD., have been given a contract to the value of 300,000l. for the electrification of the Athens tramways.

THE electricity committee of the Darlington Corporation on Saturday decided to put down an additional 500-kilowatt generating set at a cost of 3,700l. The maximum possible output of all plant now available is 540 kilowatts, and during the present winter it will have to be worked at 9 per cent. above its safe output to meet the demand.

THE Beckenham Council have decided to purchase that portion of the South Metropolitan Electric Light Company's undertaking which is within the portion of the parish of Beckenham known as the Crystal Palace district. The Beckenham Council already owns an undertaking for supplying electric light and power, and this acquisition gives it power over the whole of Beckenham.

A CIRCULAR letter has been sent by the Poplar Borough Municipal Alliance to the secretaries of the various ratepayers' associations and kindred societies within the area affected by the London County Council electric power scheme, with a view to advising the association that some progress has been made, and that no delay will occur in submitting particulars of the Bill to the various organisations and arranging concerted action to oppose the Bill.

THE Dundee Town Council have resolved to employ an electrical expert to consult with and report upon the proposals made by the resident engineer as to the most desirable extension policy to be pursued, as to whether a new station should be laid down, and as to whether extension of the present station on the lines suggested or otherwise should be adopted. It was further provided that whatever recommendations might be agreed on, that the relative works should be carried out under the direction of the Dundee electrical engineer.

A LOCAL GOVERNMENT BOARD inquiry was held at Manchester on the 14th inst. into the Corporation's application for power to borrow 60,000l. for extensions at the electricity works. The first object is to extend and complete the plant at the Dickinson Street station and sub-station plant, at a cost of 11,094l. It is desirable further converting power should be provided in order to meet the increasing demands of the future. A second object is to provide additional generating plant at Stuart Street. The work could be done very conveniently. It was determined to put in additional turbine units and gear, &c., incidental to them, at a cost of 25,250l. The provision of meters would cost 7,500l. and motors 16,156l.

### VARIETIES.

THE Devonshire County Council have now approved of a scheme for erecting, in conjunction with the Corporation, a large secondary school at Torquay.

THE education committee at Boston, Lines, have recommended the Town Council to build a school on the west side of the town to accommodate 400 children at an estimated cost of £4,000.

THE Leeds City Council last week decided by thirty votes to eleven, after a prolonged debate, to promote a Bill in Parliament for power to carry out a sewage scheme which is estimated to cost 1,250,000l.

EXTENSIVE new sidings, providing accommodation for 2,000 waggons, are to be built at Hull, at a cost of nearly 50,000l., by the North-Eastern Railway Company, to meet the exceptional increase in coal shipments from that port.

Mr. HALDANE has stated, in reply to Mr. James Mason, that it is proposed to erect barracks on the site lately acquired by the War Office adjoining the Victoria Barracks at Windsor, but the details are not yet definitely settled.

THE Local Government Board have sanctioned the loan asked by the Gainsborough Urban Council for their markets' extension and town improvement scheme. The Council intend to widen Church Street and Lord Street at a cost of 3,593*l.*, and 6,717*l.* will be spent upon extending and improving the covered market area.

THE Tunbridge Wells Town Council have resolved to proceed with the Bill to enable them to compulsorily acquire the chalybeate springs on the historic Pantiles. The Council will also apply for powers to advertise and otherwise popularise the town, the total expenditure involved being 50,000*l.*

THE Glasgow Master Painters' Association, under the auspices of the National Association of Master Painters, in connection with the annual conference of the trade which takes place in the city early in January, have arranged a Decorative Trades exhibition, which will open in the Fine Art Institute, Glasgow, on the 26th inst.

THE plans and works committee of Edinburgh Town Council have received a letter from the secretary of the Institution of Civil Engineers, London, offering for acceptance by the Corporation plans of the Dean Bridge, Edinburgh, 1829, and design for a bridge over the Water of Leith, near Edinburgh, 1829. It was agreed to accept the offer.

THE second International Congress on School Hygiene will be held at the University of London, South Kensington, from August 5 to August 7, 1907. The work will be divided into eleven sections. An exhibition of school building and furnishing and appliances will be organised by the Royal Sanitary Institute. Lectures will also be given and general discussions held.

THE London education committee have agreed:—"That it be referred to the buildings and attendance sub-committee to consider and report as to the practicability and comparative cost of providing the 1,200 school places in Stepney by a school to be erected on or near some open space, at or outside the county boundary, to and from which the senior

scholars of Stepney could be conveyed daily by London County Council trams."

THE Wesleyan Twentieth Century Fund has now paid for new chapel schemes built largely through its instrumentality the sum of 232,102*l.* in grants, and the present debt is 16½ per cent. on the entire outlay. In the last ten years the chapel department has had to do with the building of 1,013 new chapels, many of which are paid for entirely. Of this number 391 are in places where previously no Wesleyan chapel existed.

THE Liverpool tramways committee have decided to fit fifty cars, at a cost not exceeding 4*l.* per car, with a new sanding device invented by Mr. Mallins, the traffic manager, with the object of preventing skidding. The device will, it is claimed, make the skidding of wheels impossible with ordinary care on the part of the driver, and will always insure the effectual working of both the electric and hand brakes.

THE surveyor to the Abergele Town Council has reported to the Council that during the last storm a large stretch of a groyne on the shore had been swept away. He confessed that the portion destroyed had done but little good. The work of the portion left had been wonderful. In the course of a few days the remains of the groyne had collected thousands of tons of gravel, and in one place the accumulation was about 8 feet thick. Nothing of the kind had ever been seen on the Abergele beach.

A FINE piece of joinery worthy of inspection by architects is the canopy for the Archbishop's throne, Westminster Cathedral, just completed by Mr. F. A. Fawkes, of the Joinery Works, Chelmsford. It is constructed of fumed oak and walnut, inlaid with holly and ebony, and enriched with artistic carving. The architects are Messrs. J. F. Bentley & Son, 13 John Street, Adelphi, architects to the cathedral. This canopy, together with the new baldachino, will be inaugurated at High Mass on Christmas Eve.

PARAFFIN paper has been found to be useful in protecting beams and columns of iron and steel against rust. The iron was first thoroughly cleansed from rust by means of wire brushes. A coat of sticky paint was then applied, and the paper pressed lightly on the surface of the fresh paint.

P. A. GILBERT WOOD,  
6-11 Imperial Buildings,  
Ludgate Circus, London, E.C.

Other coats of paint were then put on the papered surface. It was found that iron and steel thus protected remained in the same state as at first after two years and three months' constant exposure to smoke and dust and damp. The first sticky layer of paint was also intact, and in some places still not dry. Iron and steel so treated will also resist the effect of sewer gases.

A MODEL cottage is to be erected at the forthcoming Building Trades Exhibition at Olympia. The theatres and music-halls committee of the London County Council have decided that all woodwork, flimsy materials, artificial floral decorations, &c., used in connection with the building be rendered satisfactorily non-inflammable; that before the building is used by the public a certificate from the district surveyor as to its stability be forwarded to the Council; that the position of the building be to the satisfaction of the Council; and that the regulations of the Council with regard to lighting be complied with.

THE town hall at Wootton Bassett, Wiltshire, is probably the only building of its kind in the country for which there is no owner. It was erected in 1700 by the first Earl of Rochester, and until a few months ago it belonged to Lady Meux, who, when appealed to by the inhabitants of the town to withdraw it from the sale of her estate, which was then taking place, did so, and announced that she had decided to give it to the town. Recently it was stated by her ladyship's agent that the building belonged to no one, but it is expected to be transferred to the town trust shortly.

THE Glasgow Corporation have approved of a scheme for the extension of the fruit market, which will cost 17,000*l.* in addition to the 30,000*l.* paid for the site. This plan entails the demolishing of the old police station buildings, with the exception of the front wall in Albion Street, to which should be extended the steel roof from the western portion of the markets. The scheme suggested that the proposed covering of Albion Street should be set aside in the meantime, and this would bring a saving of 2,000*l.* The total cost of the scheme would represent 2,350*l.* per annum for interest and sinking fund, and to meet that charge the market floorage of 12,959 square feet at 3*s.* 6*d.*, and the basement of 14,867 square feet at 3*d.*, would bring an estimated return of 2,453*l.*

THE gas committee of the Manchester Corporation have resolved to recommend the Council to apply for sanction to borrow 300,000*l.* for extension purposes. The sum of 100,000*l.* is needed for the construction of a new holder at the Bradford Road works—already the largest in the city and among the biggest in the whole kingdom. The new holder will be able to contain 10,000,000 cubic feet of gas. It will be the second largest holder in the country. There is only one—in London—with a greater capacity, viz. 12,000,000 cubic feet. A sum of 50,000*l.* is required for the completion of the retort-house at Gaythorn, and the balance will be devoted to the construction of street mains, service pipes, meters and stoves.

THE Mersey Docks and Harbour Board have been considering the question of what course it would be best to adopt in order to prevent the further narrowing by silting, &c., of Crosby Channel between Taylor's Bank and the Askew Spit. Mr. A. G. Lyster, the engineer-in-chief, entered into consultation with various experts. It is believed that it has been substantially decided that an improvement scheme shall be proceeded with at once, and no doubt, therefore, the matter will at an early date be mentioned at one of the weekly meetings of the Dock Board. The idea, it is stated, is to provide a training wall or walls along the Crosby Channel, and altogether the operations will necessitate an expenditure of something like 50,000*l.*

THE special committee of the Manchester Corporation who have to consider the question of sewer ventilation met at the town hall last week. Some time ago the city surveyor presented a report on the subject, and it was decided to carry out experiments in Wilmslow Road for ventilating the sewers by means of the tramway poles. Eleven of these special poles were used, and they had the effect of discharging the sewer gas at a height of 25 feet above the level of the road. The Withington committee have ordered a number of these poles to be used in a very much larger area. It has now been decided that the city surveyor should select a considerable area on which to carry out extensive experiments by means of carrying away the gas at the gable ends of houses. The committee decided further to make arrangements with Professor Delépine to conduct experiments as to the effects of sewer gas on the public health, extending over a period of two years.

# CABOT'S INSULATING AND SOUND-DEADENING QUILT

PREVENTS THE TRANSMISSION OF SOUND through walls and floors by absorbing and breaking up the sound waves. No other Deafener does this.

KEEPS OUT HEAT OR COLD exactly as do the feathers of a bird; providing innumerable minute dead-air spaces, giving highest insulating power. Will save enough fuel in a single Winter to pay for itself. Keeps a room warm in Winter, cool in Summer. DECAY, MOTH, AND VERMIN PROOF, AND UNINFLAMMABLE.

Scientific investigation has proved that for HEAT INSULATION or SOUND-DEADENING the highest degree of efficiency, with economy in cost and extreme durability, has been attained by CABOT'S QUILT.

**BUILDING IN JOHANNESBURG.**

DURING the month of October the following plans of separate buildings or tenements were approved by the Johannesburg Town Council, including alterations and additions:—

Within one mile of Market Square a total of 55 plans were passed, from one to two miles distant from the square there were 94, from two to three miles 76, and from three to six miles 74. Of these totals 44 represent new dwellings, 68 additions (domestic), 93 rooms, 15 shops, stores and offices, and the remainder additions and buildings other than to residential quarters.

Compared with the corresponding month of last year, when the number of plans for new dwellings passed was 201, the month shows a falling off in this respect of 157. And in the same particular for the period of four months ending in October last, compared with a corresponding period of the previous year, there is a decrease of 446. In the matter of shops, while last month there were only 15 in contemplation of erection, during the same month last year there were 111, showing a decrease of 96.

The estimated cost of the buildings and alterations for which plans have been passed during last month was 70,616*l.*, as compared with 173,072*l.* for the month of October 1905. Taking the four months ended on October 31 last in comparison with the same period of the previous year there is a decrease of 603,245*l.* in the estimated cost of erections during the former period.

Compared with the month of September of this year there is a decrease in the number of plans passed of 47, and a decrease in the estimated cost of erections of 6,060*l.* Since January last, when the estimated cost of erections was 173,298*l.*, there has been a gradual falling off, with one or two notable exceptions about the middle of the year.

THE School of Oriental Studies at Manchester University has, through the generosity of Professor Schuster, been enriched by the gift of a collection of Babylonian documents dating from the third millennium, B.C. The tablets illustrate the conditions prevailing in the period immediately following the reign of Khammurabi.

**VENTURENE WALL TILES.**

If a collection of the products which best exemplified English supremacy in manufactures had to be brought together, the numerous varieties of glass identified with Messrs. Chance Bros. & Co., Ltd., would hold prominent place. Their improvements form an important chapter in the history of English industry. They have utilised not only chemistry but geometry. The constant success by which translucency, lustre, colourlessness, and, we may add, strength are combined, could only be attained by a close study of chemistry as seen in phenomena both within and without furnaces. But surprising as are the vast sheets of glass which are turned out of Messrs. Chance's works, as if no trouble were required to produce them, yet to the student of science they will appear less wonderful than one of those combinations of lenses which Messrs. Chance build up for the use of lighthouses. Every element in one of the reflectors is an example of the application of geometry, and an error in the curve of a prism would be sufficient to interfere with the optical laws which rule dioptric apparatus, and might cause a disaster at sea. Simple as they may seem, the Venturene wall tiles also exemplify the scientific principles which have been the guides of Messrs. Chance. Like the revolving lights, they are solutions of a definite problem and not accidental results. Realising that a sanitary lining was required for a great many places, it was concluded that a variety of non-transparent glass would be adapted for that end. In order that the tiles might be placed as closely as possible together, so as to allow no interstices for germs or other dangers, it was necessary that the angles should be perfect right angles, and, indeed, a Venturene tile could be used as a set-square. Curves are, however, in favour in Messrs. Chance's works, and we imagine workmen and others must find greater pleasure in those tiles which serve to cover angles of walls, and which are laid out on a curve generally of 2-inch radius. They can also be obtained in or double curves. In that way what often is a weak part in a sanitary sense is securely closed. The material almost resembles porcelain. One surface is left rough in order to afford a better key to the cement; the other side is embossed and delicately

glazed. There are two kinds, white and tinted. The tiles are unchangeable in colour, and are suggestive of rigorous cleanliness and safety. They are not only pleasant to look upon, but they embody desirable sanitary qualities. They are made in various sizes, viz. 3 by 3 inches; 6 by 3 inches; 9 by 3 inches; 6 by 6 inches. The prices are very moderate. Messrs. Chance can supply a special cement for setting the tiles, and full instructions for rendering walls and fixing are given. As a sanitary wall-lining it will be evident that the tiles, from the peculiar character and material, need no recommendation.

### AMENITY OF PROVINCIAL TOWNS.

Efforts are being made to form societies for the following purposes:—

To preserve natural beauty in and around the city.

To promote such systematic planning of suburban extension as would create garden suburbs all round the city.

To secure parks, open spaces and playgrounds for young and old.

To encourage the erection of picturesque houses.

To encourage the planting of trees, shrubs, &c., in new streets, in churchyards, in open spaces and wherever possible round schools, churches and other public buildings.

To encourage and assist householders to beautify their houses and streets by the cultivation of garden plots, window boxes, &c.; by enlisting the assistance of practical gardeners and by giving advice as to suitable plants for town growth; by arranging with firms to supply seeds to members of the association at special rates; by getting the Corporation and also private individuals to lend shrubs and plants for beautifying districts where permanent growth is difficult.

To encourage flower shows and gardening competitions.

To get the public generally to become the guardians of all trees, plants and flowers in private gardens, in public parks, and in the fields and lanes around the city. Careless plucking of wild flowers and unwise attempts to transplant them into town gardens are responsible for much damage.

As a rule wild flowers will only grow in their native haunts, and never look so well elsewhere.

To get people to abstain from throwing waste paper, orange peel, banana skins, &c., into the streets, and to remove such rubbish wherever possible.

To discourage picnic parties from leaving waste paper, empty bottles, &c., in lovely country spots.

To get people to assist in preserving private parks and grounds thrown open to the public.

To induce owners of fine grounds to open them to the public at stated times.

To promote a purer atmosphere and a greater supply of sunlight by encouraging (a) owners of works to adopt the most improved appliances for smoke prevention, and to offer prizes to their employes for successful stoking, (b) householders to adopt more economic fireplaces, and to exercise greater care in the management of fires. Smoke is unconsumed fuel. It pollutes the atmosphere, obscures the sun, endangers health, renders our buildings ugly, and injures, where it fails to destroy, vegetable life.

To create enthusiasm among children for the object of this branch by means of (a) lessons in school, (b) a children's league.

### BUILDING PROSPECTS IN DUNDEE.

ACCORDING to the *Dundee Advertiser*, the prospects before the trade are of the brightest. While it is true that the requirements of the municipality in regard to the provision of sanitary accommodation have been generally met—and in this connection it must be remembered that such formed a very valuable source of employment in slack times—works of great magnitude will be commenced during the ensuing year. These are mostly of a public character. So far as the municipality is concerned there is the scheme of library extension to be carried out in terms of the Carnegie gift—two district libraries, one in the west, at Blackness Avenue and the other in the north end, at Strathmartine Road, and it may be a central reading-room. The expenditure on these works will be about 24,000l. Then there is the new technical institute, funds for which have been secured. On the site of Chapelshade jute works, Bell Street, it will be erected. The buildings, from the

### PETER PATRICK & SON,

OTLEY, YORKS.

LIST of ART PLATES published in "THE ARCHITECT" will be forwarded on application to PETER PATRICK & CO. Ltd., Publishers, Imperial Building, Ludgate Circus, E.C.

VOLUME LXXV. OF THE ARCHITECT. Handsomely bound in Cloth. Gilt Lettered, price 12s. 6d. Imperial Buildings, Ludgate Circus, E.C.

contractor's point of view, are the most important of recent times. The structural cost will run from 35,000*l.* to 40,000*l.* Then in connection with University College, arrangements are being made for the erection of the new physical laboratory, the funds for which are gifted by Mr. Andrew Carnegie, LL.D. This important adjunct of University College, the site of which is on the grounds at Union Mount, represents an expenditure of 12,500*l.* The area cleared by the great Seagate fire is a field for the tradesmen. As soon as circumstances permit a start will be made with the building of the new "Bonds." Some idea of the magnitude of this undertaking may be gathered when it is stated that the estimated cost runs from 30,000*l.* to 35,000*l.* With this promise before it the trade looks forward to the incoming year with satisfaction. So far as the operations of the past year are concerned, villa building, as stated, has been fairly brisk. The erection of tenement buildings, it seems, has got a check. Investors, realising that the supply of house property of this description, if it does not actually exceed, as some assert, is fully adequate to meet demand, have exercised restraint.

### ROOF COVERINGS.

THE "Eternit" roofing slates and insulating sheets, although recently introduced, are making their way in this country as they merit. There are many buildings which they are admirably adapted to cover, and hence it is that the Admiralty, the War Office, the Office of Works and many others in Great Britain are employing "Eternit," and it is found to be no less adapted for use in the Colonies. It is produced in the form of slates or tiles, and the three colours, grey, blue and terra-cotta, are always in stock. The material has the advantage of imparting to roofs, walls, ceilings and partitions in which it is used a pleasing appearance. It is needless to say it can be rapidly fixed, and when once in position there need be no fear of cracking or shrinking. It is equally adapted to curved as to plane surfaces. The fact that British and colonial fire insurance companies accept "Eternit" as fire-resisting enhances its other qualities. Messrs. G. R. Speaker & Co. have the sole patent rights for Great Britain, Ireland and the Isle of Man.

### SCOTTISH BUILDING TRADES FEDERATION.

THE Scottish Building Trades Federation, of which the headquarters are in Edinburgh, have sent a petition to the Home Secretary with reference to the proposed regulations as to the erection of scaffolding and measures for the safeguarding of the lives of workmen while employed in the erection or repair of buildings. The Federation urge that if the regulations are to apply to Scotland the Scottish building trades should be directly represented on the departmental committee appointed by Mr. Gladstone to inquire into the subject. The different centres of the Federation throughout Scotland have been communicated with, in order that witnesses may be sent from Aberdeen, Dundee, Inverness, Glasgow and Edinburgh to give evidence before the committee. Mr. W. Graham Yool, president of the Building Trades Exchange of the City and District of Edinburgh, made reference to the proposed regulations at the dinner of the building trades in Edinburgh recently, and said that the framers of the regulations knew absolutely nothing about the conditions which obtained as to the erection of scaffolding and the way building operations were carried out in Scotland. The regulations required to be seriously considered by all interested in the building trade.

### SMOKE ABATEMENT.

AN interdepartmental committee of the London County Council have been considering some subjects relating to physical deterioration. One of the subjects was smoke pollution. The recommendations have been considered by public control committee No. 2 with the following result:—

"The committee strongly advocate that cases of pollution of the air by smoke and noxious vapours in the manufacturing districts should be heard by a stipendiary magistrate. A stricter enforcement of the law and a change in legislation, giving higher penalties, would produce a greater improvement without imposing any serious burden on manufacturers. It should also be considered whether the responsibilities of the ordinary householder in regard to domestic smoke pollution might not be brought home to him."

With regard to this recommendation we may say that proceedings in respect of smoke nuisance in London are

almost invariably taken before stipendiary magistrates, generally with satisfactory results.

In connection with the suggestion for the stricter enforcement of the law, it has long been realised that a smoke-laden atmosphere diminishes the vitality of those who habitually breathe it, increases their liability to disease and finally shortens their lives, and, in consequence, the Council has done all that is possible to secure in London the strict enforcement of the law as to smoke nuisance.

The Council cannot take direct action in the case of smoke nuisance from trade premises, as the enforcement of the powers contained in sections 23 and 24 of the Public Health (London) Act, 1891, for dealing with such nuisance is entrusted to the borough councils. The Council is, however, vested with the power of acting in default should a borough council fail to carry out its duty, and close observation is kept by the Council's officials in cases of emission of smoke in order that the attention of the borough councils may be at once directed to any serious nuisance coming under notice. Up to October 31, 1906, attention had been directed to 9,381 infringements of the law, with the result that "trade smoke" in London has been reduced to what may be regarded as the possible minimum under the existing law.

The emission of smoke from locomotives on railways and roads is prohibited in special Acts dealing with such traffic, and under these Acts the Council is able to take direct action, although only as a common informer. Since August 1899, when the Council commenced taking action under these Acts for suppressing the then serious smoke nuisance from railway locomotives, proceedings have been taken in no less than 1,095 cases against various railway companies whose locomotives enter London, and penalties including costs amounting to 3,061*l.* 17*s.* 6*d.* have been imposed. In consequence of the action taken, nuisance from this source has been much reduced, and the railway companies now take special precautions to prevent undue emission of smoke from their locomotives, at any rate whilst they are in London.

We have repeatedly advocated the strengthening of the law as to smoke nuisance. Very little advantage can be taken of sections 23 and 24 (a) of the Public Health (London) Act, 1891, which deal with smoke of any colour provided it

is a nuisance, as the usefulness of these sections is impaired by the insertion of qualifying words. Section 24 (b), which deals with black smoke only, is usually relied on by the borough councils undertaking prosecutions, but the present procedure involves much unnecessary delay, as statutory notices have to be served before legal proceedings can be commenced and an order for abatement of the nuisance or the imposition of a penalty can be obtained, so that in the meantime the nuisance may be continued with impunity. If the word "black" were omitted this section would meet most cases of nuisance, and several of the borough councils have asked the Council to take steps when opportunity arises for extending the usefulness of the section by amending it in this direction. We have accordingly asked the public health committee, when dealing with the amendment of the Public Health Act, to provide for a modification of section 24 (b) so that it will deal not only with black smoke, but with all smoke causing a nuisance, and at the same time provide for direct procedure and cumulative penalties, so as to end the present cumbrous procedure. We have also advocated an amendment of the Railway Acts so as to provide heavier penalties on railway companies for persistent nuisance. If these amendments are secured there should be no difficulty in successfully dealing with smoke nuisance arising in London from trade premises or locomotives.

It is estimated that half of the smoke in London comes from private houses, which are unaffected by the present law. The smoke from each individual chimney may be slight, but when it is remembered that in winter probably one million domestic chimneys in London pour forth smoke daily into the atmosphere, it is evident that the total volume of smoke must be huge.

Dr. W. N. Shaw, of the Meteorological Office, states that he finds from comparison of records that, owing to its smoke, London loses half of its sunshine in winter and one-sixth in summer, and there can be no doubt that domestic grates contribute largely towards this evil. Many people advocate the abolition of the open fire in favour of the closed stove system in use on the Continent, but while undoubtedly the general adoption of such a system of heating would result in a purer external atmosphere, this would be secured at the sacrifice of much of the fresh air

inside living rooms for which open fires, by providing a good deal of ventilation, are largely responsible. It is therefore unlikely that English people will abandon the open fire. Although, owing to the very nature of its construction, it seems impossible to combine in the open grate the essentials of smokeless combustion unless anthracite coal or coke be exclusively used, careful experiment and inquiry have shown that there are several open fire-grates on the market which secure excellent combustion of coal and largely reduce the amount of smoke. At the request of H.M. Office of Works, the Coal Smoke Abatement Society recently conducted a series of elaborate tests on open grates in the Government buildings now being erected in Parliament Street, in order to ascertain which form of grate effected the most perfect combustion and consequently gave rise to the least smoke. The primary object of this experiment was doubtless the choice of the best form of grate for the new buildings, but it is hoped that the tests will result in stove makers realising the necessity of carefully studying the problem of proper firegrate construction.

Much reduction of smoke nuisance from private houses may be expected through the growing use of gas and electricity for the purpose of heating and cooking, as it has been found that nearly half a million gas-cooking stoves are now in use in London, and their use is steadily increasing. It has been suggested that the amount of smoke could also be considerably reduced by adopting systems of central heating, and we have asked the housing committee to consider this suggestion in connection with the erection of dwellings for the working classes. To greatly diminish domestic smoke, however, it is necessary to educate public opinion on the subject, and a step in this direction is the instruction which is given to children in elementary schools in the principles of combustion, so as to make them grasp the fact that smoke is not inevitable, but often results from the wasteful use of fuel.

We would remind the Council that the subject has on several occasions engaged its attention and that the under-mentioned resolutions thereon have been passed:—

1. "That it be referred to the public control committee to report the steps they are taking to enforce the Public Health (London) Act so far as it relates to the smoke nuisance, and whether they need additional powers for this purpose."

2. "That it be referred to the public control committee to consider and report upon the whole question of the smoke nuisance in London, and the means which may be adopted to remedy the evil."

3. "That the resolution of the conference [with representatives of local authorities on the administration of the Public Health (London) Act, 1891] with respect to smoke nuisance, be referred to the public control committee for consideration and report."

4. "That whereas large manufacturing works situate outside the limit of the county of London, but immediately adjacent to the same, are not subject to the provisions of the Smoke Prevention Act, and dense masses of smoke from the same are daily blown over London, it be referred to the public control committee to consider and report how the Smoke Prevention Act can best be applied and enforced within the area outside, but immediately adjacent to, the county of London."

In connection with these references we have had prepared a report giving a detailed historical survey of the subject, and dealing with the smoke arising from railway locomotives, road locomotives and private houses, and containing valuable suggestions for minimising the nuisance. We have given directions for the report to be circulated to members and to be placed on sale.

#### TESTS OF CONCRETE BUILDING BLOCKS.

So much has been said about the need of more complete information regarding the physical properties of concrete building blocks that it is gratifying to observe, says the *Engineering Record*, the attention paid to this subject for a long time by the engineering department of Iowa State College at Ames. This school is one of the leading American engineering institutions, and is supported largely by appropriations by the legislature of a State which is generally believed to show the highest average education of its citizens of all in the country. It has a rather remarkable record for taking part in the moulding of public opinion on engineering subjects, and for supplying as promptly as practicable technical information of value to the people of

## THE "DRAWWELL" GRATE

WAS PLACED

### First in the Final Tests

at the recent test with Firegrates at the New Government Offices in Whitehall, under the direction of a sub-committee of the Coal Smoke Abatement Society, in conjunction with Sir Henry Tanner and a committee of experts, for smoke abatement, heating power, fuel economy, and suitability for public and private buildings.

**N.B.—All Grates bear the Trade Mark and Name of "Drawwell" on firebrick to insure against imitation.**

This Grate can only be supplied through Builders' Merchants, Ironmongers, &c., but Drawings and Particulars can be obtained from

W. B. CLARKE, Agent.  
where the "Drawwell" can be seen in action.

the State. What its engineering department has done regarding concrete blocks is typical of its methods in other technical directions, and the evidence of interest in current problems which this work shows is probably one reason for the high favour with which the college is regarded in the Iowa legislature.

When the manufacture of concrete blocks was first established on a business basis in the State the engineering department of the college recognised that until the new building material had been subjected to thorough tests it would be regarded with suspicion by architects and engineers. The publicity given to such blocks came almost exclusively from builders of machines rather than the makers and users of the blocks, and their properties were largely unknown. The dry mixtures employed in the moulding of the blocks were not in accord with the general trend of engineering progress, while the conflicting claims made by advocates of different types of machines tended to raise some suspicion that none of them was good for much. On the other hand, there was manifestly an excellent opening for the new material in the State provided it could be shown to be reliable and not too expensive. The cost of it was not a subject of special interest to the college, but the determination of the characteristics of the blocks was a proper field for investigation. Nearly three years ago tests were accordingly begun for the purpose of determining just what these blocks, as made in Iowa, could be relied upon to do, and this investigation has been continued ever since, thus affording the public just the data which are lacking in most parts of the country.

When the first tests were made it was evident that some of the blocks showed opportunity for improvement. There was a skimping of cement in some cases, a poor quality of cement in others, poor aggregate in others, bad curing in others and a pretty general failure to appreciate the importance of producing impermeable blocks. Some blocks crushed under a load of 28.5 tons per square foot, and others were not crushed until a load of 48.8 tons was applied; some of them disintegrated after three alternate periods of freezing and thawing, while others lasted for twelve alternations. In short the early tests showed that the manufacture of such blocks demanded good materials and skilled supervision, and was not a business that could be

safely started by anybody with enough money to buy a machine and a supply of materials. The results of these tests were made public by Messrs. Marston & Reinhart, of the college, and unquestionably this publicity acted as a spur toward better work on the part of the manufacturers in the State. Tests made during the present year show that the minimum crushing strength of seasoned Iowa blocks is now about 45 tons per square foot, which was about the best figure reached two years ago. The most important advance has been made in the direction of impermeability, however, for more than fifty alternations of freezing and thawing have been necessary to produce any marked disintegration of the blocks. Tests are also being made with an apparatus which subjects the face of blocks to a spray of water for periods of several hours in order to determine the length of time it will take a driving rain to produce moisture on the inside of a wall. While these tests are a novelty, and it may be found that their practical value will be somewhat less than now seems likely, the experiments will furnish useful data regarding a property of concrete blocks which is of vital importance to the designer of buildings in which they are used.

Attention is called to this work which Dean Marston has been conducting because it suggests a field of usefulness for the laboratories of other colleges. In most institutions of this character there are testing facilities for determining all the essential properties of the concrete blocks made in their districts. The work is not so difficult that it cannot be conducted by students under the direction of the laboratory instructors, and if it is kept up continuously, as is done at Ames, it will afford information of much value to those people engaged in the block industry who are endeavouring to turn out a good product, as well as to engineers and architects. The difference in climate and materials in various parts of the country makes it desirable to have such tests carried out in all sections where concrete blocks are used, and the National Cement Users' Association affords an admirable opportunity for discussing the reasons for the variations shown by the product of different sections. It is safe to say that an advance in the industry toward uniformly better blocks will surely follow a general adoption in college testing laboratories of the work that has been going on for some time in the Iowa State College.

## JENNINGS' PATENT DUPLEX BATH VALVES

(For Hot and Cold Water Supply), and  
HALF-TURN LEVER WASTE.

Upwards of 5,000 in Use in Various Parts of the Country  
in Public Baths, Asylums, Hospitals, Infirmarys, Hotels,

# The 'DEVON' FIRE

Reg. No. 147790.

## FIRST PLACE in TESTS

### The DEVON FIRE.

Report in "Lancet," May 19, 1906.

"As a final result of the whole of the tests, the examiners find that of the grates submitted, those of Messrs. Candy & Co. and two other firms are the best, showing practically equal results."

"The amount of coal consumed by these grates was found to be moderate in comparative proportion with temperature obtained; the fires were bright and clear."

2 N.B. Thirty-seven grates were tested, including nearly all the best known modern types.

HIGHEST AWARD and MEDAL at the 1906 (Bristol) EXHIBITION of the ROYAL SANITARY EXHIBITION.

### IMPORTANT TESTS OF OPEN DOMESTIC GRATES

# SUITABLE FOR PRESENTATION.

## NOW READY, **PROUT'S** CONTINENTAL SKETCHES

*Proofs on Thick Plate Paper in Handsome Portfolio, Cloth, Gilt Lettered, Size 21 inches by 15 inches, Price 42s. Net.*

The work consists of 75 Plates, and was originally published at 30 Guineas. The Plates are the full size of Prout's Drawings, and are an exact reproduction by the

### PERMANENT INK PHOTO PROCESS.

Mr. **RUSKIN**, Author of "*The Seven Lamps of Architecture*," &c., &c., referring to these Drawings, says:—

"Prout ransacked every corner of France, Germany, the Netherlands and Italy."

"Prout was, and he remains, the only one of our artists who entirely showed Turner's sense of magnitude; and of all forms of artistic susceptibility reverent perception of true magnitude is the rarest."

"Numerous as have been his imitators, extended as his influence, there has yet appeared nothing at all to equal him; there is no stone drawing, no vitality of architecture, like Prout's."

"His 'On the Grand Canal, Venice,' is an Arabian enchantment, his 'Street in Nuremberg' is a German fairy tale."

"Prout drew every lovely street in Europe."

"I have," says Mr. Ruskin, "both in my earlier books and in my lectures at Oxford, spoken of the sketches of Prout with reverence and enthusiasm."

"The sharpest photograph is not half so natural."

"No architect, however accurate in his measurements—no artist, however sensitive in his admiration—ever gave the proportion and grace of Gothic spires and towers with the loving fidelity that Prout did. This is much to say; and therefore I say it again deliberately, there are no existing true records of the real effect of Gothic towers and spires—except only Prout's."

### THE PORTFOLIO INCLUDES THE FOLLOWING WELL-KNOWN PICTURES:—

Street in Nuremberg.  
The Grand Canal and Church of St. Maria, Della Salute, Venice.  
The Ducal Palace and Pillars of St. Mark, Venice.  
Piazzetta San Marco, Venice.  
The Interior of St. Mark's, Venice.

NEW YEAR'S SPECIAL ISSUE.

:: :: 77th VOLUME. :: ::

6 to 11 IMPERIAL BUILDINGS,

LUDGATE CIRCUS, LONDON, E.C. December 1906.

Dear Sir, On Friday, January 4th next, TWENTY THOUSAND (20,000) COPIES of "**THE ARCHITECT AND CONTRACT REPORTER**" will be sent to ARCHITECTS, BUILDERS, and CONTRACTORS throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"**THE ARCHITECT**" is, in its Advertisement Columns, the *most reliable* reference for all who are engaged in Building Operations, and is acknowledged to be *the best medium for Advertisers*. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than *one-fourth the cost* of sending 20,000 Circulars by post, and it is well known that Circulars are frequently thrown into the waste basket *unread*. Our *New Year's Double Number* always contains beautiful illustrations and valuable letterpress, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that if you wish to secure space for an Advertisement, we shall be much obliged if you will *communicate with us* without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir, yours faithfully,

GILBERT WOOD & CO., LIMITED.

**There are Many "Distempers" on the Market.

VELURE

# VELURE

## WHAT WE SAY

VELURE is a perfected JAPAN PAINT, superseding varnish, with remarkable spreading, elastic, and weather-resisting properties. One coat equals two of paint and one of varnish, and wears twice as long. 120 colours. Any shade matched. Sanitary, washable. Will not crack, chip, peel, blister, or fade. SAVES TIME, LABOUR, VARNISH, AND MONEY.

**WORTH**  
ONE GALLON  
WILL COVER ABOUT  
90 SQUARE YARDS

**TRYING**

## WHAT CUSTOMERS SAY

ONE OR MORE FRESH LETTERS WILL APPEAR EACH TIME.  
**Wears Well in Strong Sunlight.**  
The Velure has given me very great satisfaction. It is decidedly better than paint or varnish and wears well in strong sunlight without blistering.  
July 4th, 1906. ROWLAND H. HALLS, Civil Engineer, Seving Chambers, High Street, LEWIS.

**Nothing in the Market to Compare.**  
I am quite convinced that there is nothing in the market to compare with Velure. A. HEWETT, Houseboat Carlton, July 1906. Tates' Island.

Hundreds of unsolicited letters like these.  
WRITE FOR PARTICULARS AND PRICES TO

These journals have the largest circulations, and are the recognised Organs of the Boot and Shoe Trade.

### THE LLANGOLLEN ADVERTISER, Denbighshire, Merionethshire, and North Wales Journal.

Published every Friday Morning.

The *Advertiser*, which has been established thirty years, has a very large and influential circulation throughout North Wales. Being conducted entirely on neutral principles, it finds its way into families of all classes. As it is also the only paper printed and published in this district, it offers peculiar advantages to advertisers.

HUGH JONES, Castle Street, Proprietor.

**SOUTH WALES DAILY NEWS.**—Pre-eminent as an advertising medium, affording exceptionally wide and effective publicity throughout Wales and the West of England, particularly amongst the commercial and moneyed classes. No appeal for capital in the above-named district can be successful without recourse being had to the *South Wales Daily News*, which each day has a special article on "South Wales Finance."—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**SOUTH WALES ECHO.**—Eight editions daily, 36 columns, 1d. One of the largest and most attractive evening papers in the provinces. Circulation greater than that of all the other evening papers in Wales and Monmouthshire added together.—Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**CARDIFF TIMES** (Weekly, 1d.)—For thirty years at the head of the weekly press of Wales and the West of England. One of the largest penny weeklies in the world. On being reduced from a 2d. to a 1d. paper it attained a circulation of 81,155 copies. Chief Offices: Cardiff. London: 46 Fleet Street, E.C.

**NOTICE TO ADVERTISERS.**

*Under no circumstances whatever can the Proprietors of this Journal guarantee alteration of copy if received after the first post on Tuesday mornings, and no proofs can be submitted if copy arrives later than first post on Saturday mornings.*

**EDITORIAL NOTICES.**

*In view of the many difficulties which are certain to arise in connection with the law, practice rules and procedure under the Workmen's Compensation Act, we have added to our staff A VERY EMINENT BARRISTER, who has made the subject a special study, and will be glad to answer in the columns of this paper any questions relating to the complicated matters arising from the provisions of this difficult Act. Our LEGAL ADVISER will further answer any legal question that may be of interest to our readers. All letters must be addressed "LEGAL ADVISER," Office of "The Architect," Imperial Buildings, Ludgate Circus, London, E.C.*

*Correspondents are requested to make their communications as brief as possible. The space we can devote to Correspondence will not usually permit our inserting lengthy communications.*

*The Editor will be glad to receive from Architects in London and the Provinces results of Competitions and Tenders and other particulars of Works in progress in which may be interested.*

*No communication can be inserted unless authenticated by the name and address of the writer—not in every case for publication, but as a guarantee of good faith.*

*The authors of signed articles and papers read in public must necessarily be held responsible for their contents.*

**TENDERS, ETC.**

*\*\* As great disappointment is frequently expressed at the non-appearance of Contracts Open, Tenders, &c., it is particularly requested that information of this description be forwarded to the Office, Imperial Buildings, Ludgate Circus, London, E.C., not later than 2 P.M. on Thursdays.*

**COMPETITIONS OPEN.**

H. LINZELL, Ipswich (accepted) . £905 0 0

**TRADE NOTES.**

MESSRS. SMITH & Co. announce that on account of the continued advances in the price of material used in the manufacture of their new "triple expansion drain plugs" they are compelled to raise the prices of them. The same course is followed for their gradient rules and levels. By this arrangement the high quality of their manufactures will be upheld.

At the annual general meeting of Redpath, Brown & Co., Ltd., it was announced that the year's profit was 29,418/. The chairman said that if the business increased as it had increased during the past year the directors might find the capital account small enough. The surplus profits for the preference shares would be sufficient to pay an extra dividend at the rate of 1 per cent. per annum, in addition to 5 per cent. already paid, and the surplus profits for the ordinary shares would be sufficient to make up the dividend on these shares to the rate of 10 per cent. for the year.

THE picture post-card deserves to be mentioned with respect, for it has helped to make ancient and modern buildings familiar to all. In the *Picture Post-Card and Collectors' Chronicle*, edited by Mr. E. W. Richardson, a periodical is available which can be read with interest by others as well as collectors. By careful printing on good paper the numerous illustrations do justice to the originals, and the articles suggest how vast are the relations which the post-card can subserve.

**ELECTRIC NOTES.**

It is reported that a provisional arrangement has been entered into between a committee of the York Corporation and the York Tramways Company for the purchase of the company's undertaking at the expiration of their lease next year.

Mr. A. WRIGHT, consulting electrical engineer to the Marylebone Borough Council, who, pursuant to agreement, is paid a commission of 4 per cent. on all capital expenditure connected with the local municipal electric undertaking, has already received 19,875*l.* 5*s.* 5*d.*, and a further payment to him "on account" of 1,600*l.* is recommended by the finance committee.

The electricity committee of the Manchester Corporation had before them last week several tenders for a 5,000-kilowatt turbo alternator to be erected at the Stuart Street station from makers in this country, the Continent, and the United States. After considering reports by the chief engineer and the deputy chairman of the electricity committee, who have visited power stations in this country and on the Continent, it was resolved to accept the tender of Messrs. Willans & Robinson, Ltd., of Rugby. The whole of the plant will be manufactured in England. The original estimate of 20,000*l.* will not be exceeded.

**VARIETIES.**

THE *City Press* states that, whereas the successful tender of Sir William Arrol & Co., Ltd., for the widening of Blackfriars Bridge amounted to 203,006*l.*, that of Sir John Aird & Co., Ltd., was for 203,119*l.* Tenders were received from eight firms out of the fourteen that were invited.

THE Tottenham District Council has accepted an offer by a manufacturing firm in London for the purchase of 12½ acres of land in the district which was acquired some years ago for the purpose of erecting workmen's dwellings. The Council has abandoned its housing scheme.

A SCHEME has been propounded to cut a road 1½ mile long through the Sussex Downs to provide work for the unemployed and to relieve the traffic between Brighton, id-

Sussex and London of the steep and dangerous decline at Clayton Hill. Representatives of the numerous Sussex councils, meeting at Hassocks, approved of the scheme, which will entail a cost of from 12,000*l.* to 15,000*l.*

THE Scarborough Harbour Commissioners have adopted a scheme for increased accommodation which includes the widening of the west pier, but to postpone for the present the building of the spur, and, instead, to deepen the inner harbour and, if found practicable, to substitute a jetty inside that harbour. They estimate the probable cost of the amended scheme at about 15,000*l.*

MESSRS. JOHN AIRD & Co. have received the contract from Messrs. Smith's Dock Company, of North and South Shields, for the construction of large graving docks and a shipbuilding yard on a site of 160 acres of the Tees foreshore at Cargo Fleet, near Middlesbrough. Two graving docks will be established on the Tees, one 550 feet long by 66 feet entrance by 25 feet depth at high water, ordinary spring tides, and the other dock 450 feet by 60 feet entrance and 25 feet depth.

THE baths committee of the Manchester Corporation have decided to proceed with the making of plans for new baths at Bradford, Harpurhey and Withington. In their annual report the committee state that there are now twelve sets of baths at work in the city. The accommodation comprises 25 swimming-baths, 508 wash-baths, four Roman baths, three Turkish baths, one Russian bath and in the two washhousesthere are 40 washing stalls. The total capital outlay by the Corporation on baths and washhouses at March 31, 1906, was 214,424*l.* 8*s.* 9*d.*

At a meeting of the housing committee of the Liverpool Corporation a letter to Mr. F. T. Turton, the deputy city surveyor, was read from the Chief Engineer of Public Works in Brussels, in connection with a visit in November to Liverpool and other cities by a deputation from Brussels for the purpose of studying the methods of housing the working classes. Mons. Emmanuel Putzeys wrote as follows:—"I have safely received the set of plans of Liverpool's workmen's dwellings, which you have been good enough to send me, and I must thank you for your extreme kindness. Thanks to these plans, it will be possible for the Brussels Corporation to commence without

further scheming the blocks of dwellings which it proposes to erect, as we intend to profit by your great experience. It is impossible for us to estimate sufficiently the measure of the service you have rendered us, and I cannot say how pleased I am to have met with so obliging a colleague."

THE Preston borough treasurer has issued his annual return comparing the rates of various towns. According to it, West Ham is the highest rated town in England with 10s. 4d. and Oxford the lowest with 4s. 6d. The rates in Preston total 8s. 11d., of which 1s. 10d. is for the Ribble undertaking and 6½d. for education. The rates are reduced by 7d. owing to a profit of 11,036l. per annum from the markets and estates owned and from other sources. Blackpool's rates are 5s. 6d., an annual profit of 22,300l. being made on electric light, trams and markets, which is equivalent to 1s. in the pound. Big profits are made on trams in some cities, Leeds making 48,000l., Liverpool 25,320l. and Manchester 56,000l. Gas is also a productive source of municipal income, Leicester making 30,000l. profit and Manchester 68,898l. Carlisle made a reduction in the rates of 1s. 10d. through profits on gas, water, estates and other sources. The free library and museum rates throughout the country range from ½d. to 3d.

For the convenience of hunting ladies and gentlemen the Great Central Railway Company have issued a very attractive folder showing the various meets through which their line passes on the route between London and Nottingham. Within this area, it may be mentioned, the Great Central Company's system serves the Old Berkeley East, Old Berkeley West, Lord Rothschild's Stagbonds, Whaddon Chase, Bicester, Grafton, Pytchley, Atherstone, Mr. Fernie's and Quorn Hunts. The folder contains an excellent coloured

sketch map, suitably illustrated, showing the boundaries of these hunts, places of the principal meets and distances from the nearest Great Central station, in addition to an excellent service of express trains, composed of first and third-class vestibuled corridor carriages, with breakfast, luncheon, dining and restaurant cars heated throughout. Hunting tickets have also been arranged from London, full particulars of which are shown on the folder. The information is given in a concise form for easy reference, and the folder being of a convenient size should prove very useful to ladies and gentlemen hunting in these districts. Copies can be obtained free on application at Marylebone Station, and at the Great Central Company's town offices, agencies or Publicity Department, 216 Marylebone Road, N.W.

## WROUGHT-STEEL SHOP FRONTS.

WHEN Owen Jones sent to the Royal Academy a design for a shop front in iron, neither his eminence as an artist nor the novelty of the subject was sufficient to secure its admission. The Academy began with setting up Old Masters for imitation, and up to the present time it has a terror of innovations. But the interests of a nation of shopkeepers cannot be sacrificed to a doubtful proposition in aesthetics. In paintings and in old-fashioned towns shops with small panes of glass in the windows may appear to be picturesque. But in modern streets it is essential that the areas of windows should be as extensive as possible. What is demanded is uninterrupted space. For that purpose metal serves better than timber or columns of costly marble. Architecture was made for man, not man for architecture, and the bold attempt of Owen Jones would now be considered as antiquated. There can be no better illustration of the extent to which the principle of unobstructed area prevails than the special sectional bars which are made at Mannstädt. We see channels, angles and tees which are rolled of a size adapted to the construction of shop fronts, as well as a variety of sections of a more elaborate kind which are employed as supplementary to the ordinary bars, and serve decorative and connecting as well as constructive ends. Messrs. H. & F. Bonten, Ltd., supply either the sectional bars which are made of a special

working drawings. The elevations show that while the interior construction is simple and scientific, the exterior can be ornamented in a very pleasing manner with the aid of brass, tiles, carving, &c. A significant example of what is practicable is shown by the design of Herr Franz Behring, architect, Berlin, in which, by the aid of the Mannstädt bars, four floors have been constructed in a style which is original. The bars are numbered, and can be obtained from stock without loss of time. All the modern requirements of shopkeepers in provision for rolling blinds and shutters and other matters are cared for, and architects, part of whose practice consists of commercial buildings, will do well to become acquainted with the sections of Messrs. Bonten, for which they claim with reason the qualities of lightness, strength, indestructibility and elegant appearance.

### THE NEW CENTRAL CRIMINAL COURT.

On Friday, the 21st inst., some members of the Civil and Mechanical Engineers' Society and their friends visited the New Central Criminal Court, Old Bailey, for the purpose of inspecting the heating, ventilating and lighting installations, and the building generally (by kind permission of Mr. James Bell, town clerk). The party was conducted round the building by the clerk of works (Mr. Scales), who pointed out the various features of interest and courteously afforded all the requisite information appertaining to the building and its decoration. The beautiful marblework, as well as the woodwork in Austrian oak, met with much commendation, and after the tour of inspection to the various courts and offices, which were found to be complete in every respect, a descent was made, under the guidance of the engineer-in-chief, to the boiler-house and the regions underground, where the mysteries appertaining to the heating and ventilation were fully elucidated. The "Plenum" system of ventilation has been adopted throughout, and the arrangements for heating are all that could be desired, while the lighting installation of the Linolite Co., amounting to some 800 lights, which give a soft and beautiful effect, is equally to be commended.

Before leaving the building a hearty vote of thanks was accorded to the clerk of works for his services in connection

with the visit, and in reply he said that it had afforded him much pleasure to conduct around the building so interested and appreciative an assembly.

### PLANNING OF SCHOOLS.

The education committee of the London County Council have prepared the following report:—

We have considered the question of the general principles to be adopted in planning public elementary schools, regard being had to securing (i.) that the most economical and effective use is made of the accommodation provided in the schools, and (ii.) that the buildings shall be planned to the greatest possible advantage from an educational standpoint.

In the course of our deliberations we have been impressed with the fact that it is wasteful to provide at a cost of about 20*l.* per head on an average a large number of places in classrooms which, from an educational point of view, ought not to be, and, as a matter of fact, are not being fully used. We have been furnished with exhaustive reports upon the organisation of schools of various types and sizes.

In dealing with plans of new schools and enlargements of existing schools, it is necessary to bear in mind the actual number of additional places required in order to show that there is a place for every child likely to be in attendance at any one time, and also to secure that the number of places provided in each school can be distributed among the several classes consistently with a definite number of children passing annually through them during the range of age of compulsory attendance.

There are two obvious considerations which affect the maximum and minimum dimensions of classrooms, namely—

(i.) The maximum number of pupils with whom a teacher can satisfactorily deal. This number varies with different teachers.

(ii.) The consideration that the rooms are designed for class teaching, as distinguished from individual coaching, and if the class is too small the stimulus and consequent enthusiasm which is derived from numbers will be absent.

The minimum dimensions of a class determined by this second consideration are unfortunately considerably below those which a due regard to economy must enforce in con-

## CORRUGATED IRON FOR BUILDINGS

Superseded by the use of

(FIREPROOF)

# Kent Slab

(FROST AND  
WEATHERPROOF)

Buildings for all purposes which have hitherto been constructed of Galvanized Iron and Matchboarding can now be built Cooler in Summer, Warmer in Winter, and perfectly Fireproof, by the use of **KENT SLAB**. The Cost is no more, and as they do not require the repairs and painting of Galvanized Iron the cost of upkeep is done away with, and the lasting qualities are far in advance of any Iron Building.

**Kent Slab is the future Building Material.**

Write for Catalogue and list of Works carried out before using anything else.

**The Kent Slab Co., 27 Queen St., London, E.C.**

nection with the design of public elementary schools. The consideration may itself, therefore, be left out of account, motives of economy pointing to the necessity for designing the majority of the classrooms for the maximum of accommodation consistent with the capacity of the average teacher.

In this connection the inspector of the Board of Education, when reporting upon a secondary school, has stated that "so long as classes exceed 25 or 30 in number, so long will the methods in use continue to be those which are associated with the handling of large and unwieldy classes in public elementary schools, in which the individual is lost in a crowd."

We consider that the time has arrived when the Council should definitely fix 40 as the limit of accommodation for a classroom in the senior departments of schools to be erected by the Council in future, this being the maximum number of children who, in our opinion ought to be taught at one time by any teacher of average capacity. This is the number to which both the late authority and the Council have endeavoured to work for some years past, and each recent school has been built to contain two or more 40 rooms in a department.

In a two or three-storey school the corresponding classrooms in the infants' department will provide accommodation, as a rule, for forty-eight children, but in a school in which the departments are built in separate blocks there will be no such necessary relation between the accommodation of the classrooms in the infants' departments and those in the senior school.

In considering the matter from an architectural point of view we have received valuable assistance from the architect (education), who has given us the result of his long experience—extending over a period of thirty-four years—in designing public elementary schools in the county under the late authority, and has also furnished us with a report showing the changes which have taken place from time to time in the method of planning school accommodation. He has also submitted to us sketch plans and estimates for the types and sizes of buildings which are most likely to be required in future. These plans will be laid upon the table for the inspection of members.

Scheme "C" represents a school to provide accommo-

dation for 840 children, viz. 270 boys, 270 girls and 300 infants. In each of the senior departments there are five classrooms, each to accommodate 40 children and two classrooms each to accommodate 35.

Scheme "D" shows a school affording accommodation for 968 children, viz. 310 boys, 310 girls and 348 infants, and each of the senior departments consists of six rooms each to accommodate 40, and two rooms each to accommodate 35.

Scheme "E" represents a school to accommodate 1,224 children, viz. 390 boys, 390 girls and 444 infants, and contains in each of the senior departments eight rooms each to accommodate 40, and two rooms each to accommodate 35.

The rooms in the infants' department of each of the above-mentioned types of schools will, in the event of brick division walls being provided, afford accommodation as follows:—In the rooms corresponding to the rooms for 40 in the senior departments, 48 children each, and in the remaining rooms, which will be available for babies, 30 children each.

As regards schools of the three-storey type, the size of the rooms in the infants' department on the ground floor is determined by that of the rooms on the floor above, and the accommodation works out at about 9 square feet a place by reason of the fact that smaller desks are used, and consequently an additional row can be placed. In our opinion, however, this method of calculating the accommodation of such classrooms is unsound in principle. The only true basis of the accommodation of a classroom appears to us to be the number of children who can properly be seated, sufficient allowance being made for teachers' desk, blackboards, &c., and if 10 feet super. is a proper allowance in the senior departments of public elementary schools, we do not think that less space should be provided in the infants' departments. Indeed, but for the heavy additional expenditure which would be involved, we would have recommended the Council to adopt the same basis of calculation in all departments.

We have referred more particularly to three-storey buildings, as this is the type of school which has been erected in the majority of instances in the past, but it should be pointed out that as the need for new schools in the future is likely to be greater in the suburbs than in the more densely

## Are you interested in WOOD PRESERVATION?

Apply to the **ANTHROL** Company, Kinning Park, Glasgow, and you will receive an interesting booklet on the subject, which gives a full account of the remarkable properties of **ANTHROL** and describes the very simple and inexpensive methods by which it is applied.

It is an antiseptic preparation which protects any kind of wood impregnated with it from decay in both damp and dry situations, and from the ravages of all wood-destroying organisms in either temperate or tropical climates.

# ANTHROL

The result of much practical experiment has shown it to be the most efficient and economical means for preserving any variety of structural timber which it is impracticable or undesirable to have creosoted under pressure. **ANTHROL** does not require expensive pressure-plant; does not reduce the mechanical efficiency of the timber; does not increase the liability of the wood to inflame; does not render the wood poisonous to human beings or domestic animals; and does not leave the surface of the wood black and unpleasant for handling—on the contrary, **ANTHROL**, while protecting from decay, at the same time greatly improves the appearance of wood, and may be varnished or painted if desired.

The **ANTHROL** COMPANY, Kinning Park, GLASGOW  
and 6 Crosby Square, LONDON

populated parts of the county, it will probably be found possible to secure larger sites, thus more frequently enabling separate buildings of one or two storeys to be erected. The majority of schools built during the last four or five years, however, consist of one or two storeys, and the Board of Education have expressed their preference for this type of school to the type consisting of three storeys.

In connection with the general question we have been considering the possibility of providing partitions instead of permanent structural brick division walls between the classrooms, in case it should be thought desirable at any future time either to alter the shape or reduce the size of the classrooms, such an arrangement could be carried out without incurring much expense, and we have approved a plan showing how it would be possible to obtain such elasticity in working.

The subjoined statement shows the estimated cost of erecting on suitable sites three-storey schools with accommodation as follows—

(i.) School for 840 places, estimated cost, main building only, 8,824*l.*; estimated cost a place, main building only, 10*l.* 10*s.* 1*d.*

(ii.) School for 968 places, estimated cost, main building only, 13,120*l.*; estimated cost a place, main building only, 13*l.* 11*s.*

(iii.) School for 1,224 places, estimated cost, main building only, 15,128*l.*; estimated cost a place, main building only, 12*l.* 7*s.* 2*d.*

The difference in cost between (i.), (ii.) and (iii.) is caused by the provision of two staircases in (i.) and four in (ii.) and (iii.), necessitated by the requirements of the Board of Education.

We think it right to point out that the proposed rearrangement of structure will, in the case of most of the new schools, involve an addition to the staff of the school, consequent upon the lesser numbers of children which will be taught in one room. We cannot give any exact estimate, as the number must depend upon the plan finally adopted in each school. Any additional expenditure in respect of staff thus incurred will be nevertheless more than compensated for by the better teaching which will be given to the children, by reason of a lesser number being taught in the separate class. We recommend—

That as a general rule in public elementary schools to be erected in future no classroom in the senior departments be planned to accommodate more than 40 scholars, and no classroom in the infants' department for more than 48, except in particular cases in which, in the opinion of the education committee, there are circumstances which render any modification in the design or character of the building desirable.

### THE SAN FRANCISCO TESTS.

It seems reasonable to hope that out of the chaos of evidence (or guesswork) resulting from the San Francisco fire there will eventually come some valuable data. We believe, says the *American Architectural Review*, that by far the most reliable work has been done by the Structural Association of San Francisco, formed immediately after the catastrophe, whose membership is open to all persons concerned in the design, manufacture and use of structural and fire-resisting materials. It is interesting to note that they are to establish a fire-experiment station, similar to the one at Columbia University and at the Massachusetts Institute of Technology.

Mr. Theodore H. Skinner, architect, and member of the association, recently gave before the Technology Club of Boston a most valuable *résumé* of his investigations of the result of fire upon different structures, upon fireproofing of columns, of floors, &c.

His examinations showed that some things should not be used at all to fireproof steel columns. Expanded metal and plaster were absolutely useless, even where two coatings of metal and plaster, one outside the other, were used around columns.

In regard to terra-cotta:—Mr. Skinner states that practically all of that material in San Francisco was hard burned and very dense, and not able to expand without breaking. In many cases it broke off, leaving the column unprotected. In some cases the bad practice was followed of placing steam and water pipes within the covering of columns. The explosion of these overheated pipes blew off the covering and the column was left bare.

Cinder concrete has undergone considerable questioning and examination in connection with the fire. Its immediate effect was to protect the columns well, but it became badly calcined in doing so, and can be cut with a knife. In one case there was a protection of 2 inches of Keen cement upon cast-iron columns. This protection did its work thoroughly, but likewise gave up its strength in so doing.

Stone concrete as column fireproofing, especially when used with spirally wound rod reinforcement, behaved well. It was demonstrated that this, as well as cinder concrete fireproofing, should be in direct contact with the column, without air space.

Brickwork behaved remarkably well when properly bonded. Where the bond was simply a metal tie the expansion of the face brick caused it to fall away from the backing or shear off.

Mr. Skinner's conclusions were, that it is possible to build a fireproof building if the common practice of using nine essentials and omitting one is avoided. All woodwork should be scrupulously ruled out by using metal trims, granolithic or terrazzo floors, &c. Sprinklers should be installed everywhere. Exterior openings should have shutters, metal sash-frames and wire glass—recent tests have shown the high efficiency of the latter. Interior flues, elevator-shafts, &c., should be cut off by wire glass. No pipes or wire ways should be allowed within columns or column coverings. Reinforced concrete beams should be protected by hung ceiling, and in floors care should be taken that the rods, in the process of making the floor, do not come close to the under side of the floor, where they would be wholly unprotected from heat. Tests of reinforced concrete floors, made in England, have shown that the rods frequently get trodden down while the floor is in process of making.

The catastrophe gave chance to study the action of rust upon rock concrete, cinder concrete, and upon protected steel. We quote the following from the report made by Mr. Luther Wagoner, C.E., and Mr. Skinner. This report appears in the issue of *Engineering News* for November 1, 1906, and is well worth careful reading:—

"The cinder concrete is somewhat porous with occasional voids, and also contains coal from dust up to lumps three-quarters of an inch in diameter. Rust spots occur in the concrete, and where such spots are in contact with the metal the

corrosion is severe. The rust spots are sometimes an inch across, quite soft and easily removed by the finger nail. Occasional splinters of wood occur in the concrete, which shows that the heat was not severe, as the wood is not charred. From the position of the floors it is certain that no water has reached the concrete since April 18, and that the corrosion was prior to the fire, but it appears to be more marked where floors have been exposed to the rains since the fire. The corrosion is irregular in amount. In some cases the expanded metal is only slightly rusted, and in places it is entirely destroyed; several places were noticed where a small semicircular patch had been removed from the edge of a metal strip; also at times it crossed the surface of the strip in a line, which suggests that it followed a surface crack in the metal. There seemed to be a tendency to corrosion at certain points in the diamond mesh, which would indicate that the metal had been strained in the process of setting and expanding, but there is not positive proof of this.

"The extent of the corrosion is great enough to seriously endanger the safety of the floors, and it is not probable that the floors would have supported their loads more than one to three years longer.

"*Causes of Corrosion.*—Various reasons for the corrosion of metal in cinder concrete have been given. Prominent among them is the belief that it is due to sulphur in the cinders. In order to corrode metal the sulphur must first oxidise to  $H_2SO_4$ , and if there is any notable amount of cement present it would be absorbed by the cement. It is not probable that sulphur can corrode metal unless it is either close to it or the concrete is very deficient in cement. . . .

"Slitting and expanding the metal sheets in manufacturing expanded metal may cause minute cracks upon the surface of the metal. If this be combined, as in the case here, with a thin slab of concrete, porous, and ranging in thickness from  $2\frac{1}{4}$  to  $4\frac{1}{2}$  inches, with the metal in many cases flush with the bottom of the slab, there is an ideal condition for the rusting of the metal. . . .

"The Bullock and Jones building, a ten-storey structure, had all its floors of rock concrete and expanded metal. During the repairs of the steel frame it was necessary to remove quite a number of floor-panels, and the metal was

### EVERYDAY ART.

IN a lecture before the Cosmopolitan Club Mr. R. Catterson Smith, head-master of the Birmingham Art School, said he was of opinion that the general public had no knowledge of the good or bad in art. They were led in thought and judgment by commercial exaggerations. When he took a walk through the streets to look into the shops to see what he would like to buy he found that there was nothing in his opinion worth buying. The highly-ornamented article was generally found to be of inferior work. The only pieces of silver which were worth having were copies of old ones, and copies could never approach the original. They might get pieces of jewellery which were good artistically, but they would not get them from the jewellery trade. He had never yet seen the pieces of trade jewellery which he should consider works of art. Real works of art were at present only for the rich, but he believed that the whole mass of the people would get them under a different condition of things. The public, however, did not demand good art, they simply asked for cheap things. Everything that was conducive to good art was eliminated, and most of the manufacturers were aware of the fact. If one wished to produce good art one must not be pressed for time or space. It was helpful to the craftsman if he was given some inkling as to the purpose for which the article he made was intended. If they wished to do good work they must be at white heat all the time, anxious for accuracy to the millionth part, not of a mathematical but of a spiritual inch. The average man was unable to distinguish the difference between machine-wrought and hand-worked silver; in fact, he was afraid that the average man preferred the machine-wrought article. The general public did not know how to ask for good art. Notwithstanding the number of art galleries and museums which were in their midst, they wandered about them without guides, admiring good, bad and indifferent, and many examples of utterly bad art were chosen by the

committees of art galleries. The Nettlefold Vase trophy exhibited in the Birmingham Art Gallery was a purely mechanical article, and certainly anyone admiring it was degraded in artistic sensibility. What people admired were the sensational pictures in the galleries or the works of artists who happened to be fashionable. The art schools of the country have in past years been conducted on entirely wrong lines, as many of them were even now. He considered that insufficient room was given to art in the general scheme of education, and he did not see the remedy for this in the art schools. Only one hour a week was given to the teaching of art in the schools, and that hour was at the wrong time; the chief of the instruction was given by teachers who taught what was mostly book knowledge and art ignorance, just sufficient to enable young ladies to talk nicely on art subjects. He would like to see in every centre a system of art instruction by expert lecturers, and demonstrations should be given by teachers selected by an experienced committee, and those teachers should be thoroughly capable of pointing out what was good and what was bad. There should be lectures at least once a month and an open discussion should follow.

### THE L.C.C. AND CONCRETE BLOCKS.

THE housing of the working classes committee of the London County Council, having bricks manufactured on the Norbury estate, propose to manufacture concrete blocks and slabs from burnt ballast and the broken materials left from the brick burning. The concrete blocks will be required for use in the construction of retaining walls, &c., and the concrete slabs will be used for the internal walls of the cottages. The supply of red bricks made or in course of manufacture will only be sufficient for about one-half of the cottages shortly to be erected on Section B, and it is proposed to continue the manufacture of red bricks in small quantities in accordance with the demands of the estate. Only a small portion of the plant will be required in the manufacture of red bricks, and the men employed in connection with the operations above referred to will also be engaged in the care of the remaining machinery and plant during the time it is lying idle. As it is not proposed to resume the making of bricks on a large scale for some time

**ACETYLENE** GAS  
GENERATION.

Estimates for  
**COMPLETE INSTALLATIONS for**  
**Mansions, Churches, Villages, Factories, &c.**

This Company owns the Alby Carbide Works in Sweden, and is prepared to quote for the celebrated "ALBY" Brand of Carbide, delivered to any part of the world. The "ALBY" is the hallmark of purity, quality, and high gas yield.  
**CHARLES J. QUIRK, Assoc. Mem. Inst. C.E. (Ireland), General Manager.**

to come, the 10 horse-power double-cylinder portable engine is to be disposed of if a satisfactory offer can be obtained, as it will depreciate in value when not in use. The expenditure during the season 1906-7 for the purposes above-mentioned is estimated not to exceed 1,200*l*.

The Council authorised expenditure not exceeding 4,000*l*. in respect of brickmaking operations during the season 1905-6, and the total expenditure which will ultimately be incurred under those votes is estimated at 3,870*l*. About 2,942,000 stock bricks and 180,000 red bricks have been made during the season, the bricks being of very good quality and the cost of manufacture low. As a larger number of bricks had been manufactured than could be immediately utilised for the erection of cottages on the estate, the committee are prepared to accept any favourable offer that might be received for the purchase of some of the bricks. An offer has been received for the purchase of two clamps, together containing about 900,000 bricks, which for present purposes may be regarded as surplus stock. This offer shows a surplus over the cost of production for the season, but the accounts have not yet been audited by the comptroller. Subject to a satisfactory arrangement as to the removal of the bricks, they propose to accept the offer.

#### CENTRING FOR CONCRETE BUILDINGS.\*

EVERY one at all conversant with the cost of reinforced concrete work knows only too well the disproportionate amount due to centring. In very heavy foundation work this proportion may not be excessive, but in some buildings of reinforced concrete the labour cost of installing and removing the wooden false work, together with the cost of the material itself, has made up 50 per cent. of the entire expenditure.

The cost of the centring material itself is heavy, and, when wood is considered, is growing heavier almost month by month. This is due to the constant and rapid increase in the prices of timber and lumber of all kinds which has taken place during the past few months.

\* From a paper by Mr. E. P. Goodrich, Am.Soc.C.E., read before a meeting of the Association of American Portland Cement Manufacturers and published in the *American Architect*.

The first plan which comes to mind, looking toward the economising of centring material, is to make repeated use of each piece. This can readily be accomplished where a building is largely a repetition from floor to floor or from bay to bay. But unless the structure is very large, a considerable time is lost through the necessary delays experienced while waiting for the concrete to set before the centres can be removed. This is the case, however, only where the concrete is handled in a wet state.

Consideration of these points led to the adoption for a series of one-storey buildings of the method already described, *i.e.* casting on the ground the columns, beams, girders and roof slabs, and of erecting them as structural steel is handled. For the moulds for columns cast on one side only three pieces are needed in place of four, if the column is moulded vertically. This effects a saving of 25 per cent. for column centring material. Further, little or none of the costly bolting or bracing is needed when the concrete has a depth of but a few inches, as is all that is necessary if the columns are cast on the side. Another advantage found with these column forms, which is also shared by the beam and girder forms under this method, is the fact that the side boards can be removed after twenty-four or at the most forty-eight hours, and used again two or three times during the intervals in which they must be left in place if the work is done in the usual way. This alone effects a 50 per cent. saving of material, as only the narrow bottom pieces are needed in any great numbers. In the special buildings described a much greater saving was effected in the centring for the roof slabs in the following manner:—The ground floor (which consisted of concrete) was installed as soon as the girders and beams had been erected. On this flat surface ordinary smooth paraffined building-paper was spread, and the roof slabs marked out by narrow strips of wood of a width just equal to the thickness of the desired slabs. The reinforcing rods were then placed as required, and the cinder concrete spread to fill the moulds. In this way the regular floor formed the major part of the slab moulds, and the cost of centring material in this instance was almost nothing. (The ground floor might better have been laid before the slabs were moulded, the roof slabs cast as above described, and the large members set up on top of the slabs.) A further saving in

J. B. ORR & CO., Ltd.,

CHARLTON, LONDON, S.E.

this material was effected by this "dry" method of construction, through the obviating of the necessity of using the almost innumerable vertical supports which serve to uphold the centres when the whole floor or roof surface must be built up in wood so as to form moulds into which the wet concrete is poured. These various savings effected in the material for centring cut its cost on the particular structure in question to less than 25 per cent. of what it would have been had the other method been employed.

In another building in which the "wet" method was used a saving of centring material was effected in the following manner:—It was deemed best in this particular building to erect brick walls. It was then suggested that the brickwork be built first and that proper recesses and flue-like openings be built into the walls. Thus by using much fewer boards these recesses could be transformed into moulds into which the wet concrete could be poured. This concrete could be properly reinforced for the columns for the support of the building. In a similar way the beams and girders which were designed to come wholly or in part within the walls had the brickwork so built as to form a part of the bottom and at least one side of the forms.

An indirect method of saving centring material is to devise methods whereby a lesser amount originally purchased can be used more times and thus reduce the relative cost. One such device was employed with marked success on several large buildings, and the floor moulds for all parts except the girders were good enough for the whole of another building after having been used six or seven times in the first one. Instead of making the moulds for the beams in the form of boxes open on the top, and providing thin, easily damaged mould boards for the slab bottoms, the idea was reversed and slab bottoms were combined with the beam side pieces so as to make a box with its open side downwards. This box was supported on cleats fastened to the lower outside edges of the girder boxes. Besides indirectly saving centring material, these boxes readily lend themselves to use as cores to effect a material saving of concrete, as has been mentioned above.

The cost of timber for centring is advancing so rapidly that the use of other materials is coming into greater and greater prominence. The use made of the brick wall described above could as readily be adapted to walls made

of concrete blocks, whether the latter were cast *in situ* or on the ground and hoisted and placed "in the dry." If the price of lumber advances much higher it will be possible to make core-boxes of sheet-metal instead of wood, but in all essential respects like those mentioned above. There are on the market several patented systems of moulding concrete walls with wet concrete by making use of small metal moulds. The great disadvantage with most of them is the small size of the moulds employed, which thus increase the labour incident to the placing of only small quantities of concrete at any one point. After an investigation of these systems a slightly different idea was worked out with regard to the column moulds. Column forms built in accordance with this idea were used very successfully on two large buildings. Cinder-concrete shells  $1\frac{1}{2}$  inch in thickness were cast in proper moulds. These shells were piled up and properly wedged into position, and served as the moulds into which was poured the concrete for the columns. High carbon steel-wire spirals were used for the column reinforcement, and these spirals were worked into the cinder-shells so that no extra reinforcing was needed after the shells were put in place. Sheet-iron, bent into drums of the proper dimensions for the columns, formed the outsides of the moulds for casting the cinder shells, and it was found most economical to employ for the inside cylinder moulds expanded-metal lath. The sheet-iron for the outside mould gave the outside of the cinder cylinders a smooth exterior surface (when the concrete was properly tamped), while the metal lath was fine enough in texture to prevent the concrete from running through its meshes more than enough to provide a perfect bond between the cinder shell and the concrete matrix of the completed columns. The process of preparing the shells was as follows:—A collapsible drum was constructed, upon which was first wound the wire for the reinforcement. Outside of this was wrapped the lath, which was then fastened to the wire reinforcement by wire clips in the same manner in which metal lath is fastened together and to ordinary metal studding. The wire-and-lath cylinders were then placed inside the sheet-metal moulds and cinder concrete tamped between, to form the cinder shell. The metal sheets were held in proper shape and position by light wooden frames, built to the necessary shape and so

bolted as to be easily removed. These forms and the metal sheets used for the outsides of the moulds were removed after twenty-four hours and used for other moulds, the plat-forms on which the cinder shells were cast being the only parts which it was necessary to leave untouched for longer periods. In this way the costs for the moulds for the cinder shells were reduced to a minimum and, since the sheet-metal could be easily lapped to any extent, the same sheets served to make shells of all diameters, from the largest to the smallest, and were still available at the end of the job.

These cinder shells have many advantages:—

(a) They form a fireproofing for the concrete columns, which are manifestly the most vulnerable parts of all concrete structures.

(b) They do away with all column centring.

(c) They carry the spiral column reinforcing in a manner very easily handled and with perfect certainty of no possibility of displacement.

(d) They are capable of erection with comparatively unskilled labour.

(e) They require forms for their manufacture which are of the simplest and, because of the possibility of repeated use, are of the cheapest construction.

(f) Since round columns are the most efficient per square inch of effective area, they provide the strongest column with a given area.

(g) That portion of the concrete column which is not designed to carry any load is of poor quality material, thus making a column of slightly cheaper cost.

Turning now to the item of labour on the fabrication of centring, three points are potent in effecting economies:—

(a) Have as much work as possible done in regular shops so that considerable use can be made of machinery. By this means, too, piecework can be employed with the resulting economies. For one building the core boxes described above were constructed in a planing mill, and were delivered ready for erection. The wire-and-lath cylinders used in the cinder shells were similarly fabricated, and it is this same means which makes it possible to fabricate so cheaply the beam reinforcement in the somewhat complicated truss forms which are most effective.

(b) Have as much work as possible so arranged that it

can be executed by comparatively unskilled labour. The boxes described above were almost entirely handled and placed at the building by common labour, thus effecting a great economy over the usual methods, by which labour conditions required the employment of high-priced skilled labour for working wood.

(c) Obviate as far as possible the use of the saw and the hammer. The first can be done by purchasing all material cut to sketch and by making it a cause of discharge to cut a piece of lumber. The hammer and nails should be replaced by bolts and a wrench.

The last item also goes far towards reducing the cost of removing the centring. Where the cinder shells were used there was no expenditure for removing column forms, and it was nearly a minimum where the "dry" method was employed. Of course, all builders use oil to coat the centres. A liberal use of this material greatly protects the wood against being damaged by its alternate wetting and drying. It also tends to give a good surface to the concrete, but, best of all, it largely reduces the costs of removing the centres.

Great care should be taken in the design of all centring to make it as readily erected and removed as possible. It is believed that fully as much time can be profitably devoted in the office to the careful design of the centring for a job as to the design of the reinforcement. As to the latter it is believed that each beam and other member should be as carefully analysed as are complicated plate-girders. Regular strain-sheets should be prepared and preserved for record, and all elements carefully investigated. Another point for careful study in the office is that of reducing to a minimum the number of types of beam reinforcement to be used on a building. This item is even more important than in the design of structural steelwork, where it is made a cardinal point. Reinforcement and centring should be made interchangeable from bay to bay and from floor to floor, as far as possible. Very often a design can be altered so that this can be effected with great economic advantage and with little or no loss of architectural or other feature.

Many of these points are only too obvious, but they have been included here in an endeavour to bring together as far as possible, in a short article, the most important points which tend toward economy, efficiency and excellence.

## THE ARCHITECT AND . . CONTRACT REPORTER.

### NEW YEAR'S SPECIAL ISSUE.

77th Volume.

6 to 11 IMPERIAL BUILDINGS,  
LUDGATE CIRCUS, LONDON, E.C.

December, 1906.

DEAR SIR,

On Friday, January 4th next, **TWENTY THOUSAND (20,000) COPIES** of "*The Architect and Contract Reporter*" will be sent to Architects, Builders and Contractors throughout the United Kingdom, America, and the Colonies, and to the Clerks and Surveyors of Local Boards and Corporations.

"THE ARCHITECT" is, in its Advertisement Columns, the most reliable reference for all who are engaged in Building Operations, and is acknowledged to be **THE BEST MEDIUM FOR ADVERTISERS**. The List of Prices will prove that the expense of a Page Advertisement in this issue would amount to less than **ONE-FOURTH THE COST** of sending **20,000 CIRCULARS** by post, and it is well known that Circulars are frequently thrown into the waste basket unread. Our New Year's Double Number always contains beautiful illustrations and valuable letter-press, and is consequently well studied and kept for reference.

The earliest positions will be allotted to first applicants, so that, if you wish to secure space for an Advertisement, we shall be much obliged if you will communicate with us without delay. For many years past we have had to leave out Advertisements which have reached us after the limited number of pages have been filled.

We are, Dear Sir,  
Yours faithfully,  
**GILBERT WOOD & CO., LTD.**
